Employees are increasingly asked to make sophisticated decisions about their pension and healthcare plans. Yet recent research shows that the decisions 'real' people make are often not those of the careful and well-informed economic agent conventionally portrayed in economic research. Rather, decision-makers tend to operate with flawed information and make some of the most critical financial decisions of their lives lacking a full understanding of the options before them and the implications of their decisions. Pension Design and Structure explores the assumptions behind commonly-held theories of retirement decision-making, in order to draw out the consequences of frontier research in behavioral finance and economics for those interested in better design and structure of retirement pensions. Using large datasets newly provided by financial service firms and real-

world experiments, this volume tests the hypotheses of this research. This is the first book to explore the implications of behavioral finance research for pensions and retirement studies. The authors blend cutting-edge research from several fields including Finance, Economics, Management, Sociology, and Psychology. The book will be of interest to pension plan participants and sponsors, financial service groups responsible for pensions, and retirement system regulators.

Principles of Accounting Volume 1 - Financial Accounting

This text is intended for a first course in introductory financial accounting. It was updated to reflect current International Financial Reporting Standards (IFRS). For example, it reflects the recent change in IAS38, para. 98, allowing the use of multiple methods in amortizing intangible assets. It focuses on core Introductory Financial Accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. Excluded are advanced topics that are covered in Intermediate Financial Accounting, such as leases and bond

amortization. The text takes a corporate approach (vs. beginning with a sole proprietorship emphasis and then converting to a corporate approach); this consistency throughout the book reduces confusion for the introductory student. The book covers all essential topics: the accounting cycle, merchandising, assigning costs to inventory, cash and receivables, property, plant and equipment, debt financing, equity financing, statement of cash flows, financial statement analysis, and proprietorships and partnerships. Additionally, this version of the open text is supported by Lyryx Learning, offering at an affordable price editorial services to develop and adapt the content, formative online assessment, course supplements, and daily support to both the students and instructors.
