James Joseph Sylvester (1814-97) was an English mathematician who made key contributions to numerous areas of his field and was also of primary importance in the development of American mathematics, both as inaugural Professor of Mathematics at Johns Hopkins University and founder of the American Journal of Mathematics. Originally published in 1909, this book forms the third in four volumes of Sylvester's mathematical papers, covering the period from 1870 to 1883. Together these volumes provide a comprehensive resource that will be of value to anyone with an interest in Sylvester's theories and the history of mathematics.

Trait expert Ruth Culham has culled papers from diverse classrooms and collated them here into a unique trait-based teaching resource. Each paper is scored by trait and includes teacher commentary explaining the evaluation based on Culham's scoring guides, which are included in the book. You'll find six papers per trait, spanning the grading continuum from low to high. Put papers on the overhead or Smartboard as models for a whole-class writing lesson, make copies for small-group discussions of a trait, invite students to critique or rank papers--these are just a few of the possibilities. All papers are included on CD in two versions--original and with teacher comments.- Includes CD with interactive PDFs!-

Perfect for interactive white boards!
