A Practical Guide to Third Trimester of Pregnancy & Puerperium

Practical Approaches to Controversies in Obstetrical Care are offered in this issue of Obstetrics and Gynecology Clinics. Guest Editors Drs. George Saade and Sean Blackwell have recruited authorities in the field to review issues including recurrent spontaneous pregnancy loss, treatment of thromboembolic events prior to or during pregnancy, multiple gestations, complications surrounding severe preeclampsia, and care for the pregnant patient with an underlying seizure disorder.

Clinical Reflexology takes the practitioner on a journey of examination, critical review and debate prior to making recommendations for best practice in reflexology. The phenomenal rise in interest by health professionals in

Complementary and Alternative Medicine (CAM), and in particular touch therapies, has led to a need for texts that relate and integrate theory and practice to health care settings. Clinical Reflexology does this, expanding and exploring concepts introduced in the first edition. Many CAM books have been written for therapists working in private practice but many of these practitioners are also now working in healthcare settings. This book allows both groups to facilitate the greater integration of clinical reflexology in clinical practice. The book is divided into two sections. The first deals with key themes, including an up-to-date review of the research evidence and appropriate methodology, safe and supported practice and integration issues. All these themes are explored and discussed utilizing the available literature, analysis of models and concepts and are related specifically to health care practice. The second section focuses on the clinical application of reflexology and how it can be best adapted to the context. The contributors are committed pioneers in their field with a track record of integrating reflexology within clinical settings. Many are teachers, coordinators of therapy services and supervisors. ABOUT THE AUTHORS Dr Peter Mackereth is the Clinical Lead for Complementary Therapies and Smoking Cessation Services at The Christie NHS Foundation Trust Manchester. He is a registered nurse, and has worked in intensive care, neurology and oncology. Peter has an MA in Medical Ethics and has completed a PhD project examining reflexology vs. relaxation training for people with Multiple Sclerosis. An author and renowned speaker, Peter has held academic post in number of universities, most recently as Reader in Integrative Health at the University of Derby. Denise Tiran, a midwife, lecturer and reflex zone therapist, is an internationally acclaimed authority on complementary therapies in pregnancy and childbirth. She is Director of Expectancy, the leading provider of professional education on the safe use of complementary therapies in maternity care, including a special pregnancy course for reflexologists. Her latest book, Reflexology for Pregnancy and Childbirth, was published in January 2010.

Cumulated Index Medicus

This book comprises MCQs that are designed to test the candidate's theoretical and practical knowledge of obstetrics and gynaecology as recommended in the syllabus for the MRCOG Part 2 examination. Upwards of 250 single and multiple stem questions will be included giving over 800 questions in all. Full answers with explanatory text will be provided. Where appropriate the answers will be supplemented by key message boxes and footnotes to direct further study - in this way the book can be used as a study guide as well as a tool for revision and self-assessment. A unique feature of the book will be the accompanying CD ROM. Using this the candidate will be able to select at random questions to make up a practice paper which they can sit under 'examination conditions'. When the candidate has completed the mock examination the program will calculate their scores and indicate whether this would represent a 'good pass / pass / borderline pass or fail'. As with the text, full explanations of the answers will be provided.

Postnatal Care E-Book

Understand the rapidly growing complexities of obstetric hematology and high-risk pregnancy management, with experts in the field. Now in its second edition, this comprehensive and essential guide focuses on providing the best support for patients and clinical staff, to prevent serious complications in pregnancy and the post-partum period for both mother and baby. Wide-ranging and detailed, the guide offers discussions on basic principles of best care, through to tackling lesser-known hematological conditions, such as cytopenias and hemoglobinopathies. Updated with color illustrations, cutting-edge research, accurate blood film reproductions, and practical case studies, the revised edition places invaluable advice into everyday context. This unique resource is essential reading for trainees and practitioners in obstetrics, anesthesia, and hematology, as well as midwives, nurses, and laboratory staff. Clarifying difficult procedures for disease prevention, the guide ensures safety when the stakes are high. Reflecting current evidence-based guidelines, the updated volume is key to improving pregnancy outcomes worldwide.

Principles and Practice of Maternal Critical Care

The original series, *Advances in Prostaglandin Research*, edited by Sultan M. M. Karim, was published by MTP Press in three volumes in 1975 and 1976. A glance at those books illustrates the progress that has been made since then. The thromboxanes were mentioned twice (first publication 1975) and prostacyclin not once (first publication 1976); leukotrienes were only on the horizon. The amazing generation of research data in the last 10-15 years has given new, broad insights into many areas, including asthma, inflammation, renal, cardiovascular and gastrointestinal diseases and in reproduction, and has led in some instances to real clinical benefit. This series, *Advances in Eicosanoid Research*, reflects the current understanding of prostaglandins, thromboxanes and leukotrienes. The aim is to provide an introductory background to each topic and the most up-to-date information available. Although each book stands alone, the eicosanoids cut across many boundaries in their basic actions; selected chapters from each book in the series will provide illuminating and productive information for all readers which will advance their education and research. In the production of this series, I must acknowledge with pleasure my collaboration with editors and authors and the patient endeavours of Dr Michael Brewis and the staff at MTP Press. KEITH HILUER University of Southampton England ix Preface This book is an appraisal of areas in human reproduction where eicosanoid studies (prostaglandins, leukotrienes and thromboxanes) are contributing to

physiological and pathological awareness and clinical advances.

This guide provides a full range of updated, evidence-based norms and standards that will enable health care providers to give high quality care during pregnancy, delivery and in the postpartum period, considering the needs of the mother and her newborn baby. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth and during the first week of life (or later) for routine and emergency care. This guide is a guide for clinical decision-making. It facilitates the collection; analysis, classification and use of relevant information by suggesting key questions, essential observations and/or examinations, and recommending appropriate research-based interventions. It promotes the early detection of complications and the initiation of early and appropriate treatment, including time referral, if necessary. Correct use of this guide should help reduce high maternal and perinatal mortality and morbidity rates prevalent in many parts of the developing world, thereby making pregnancy and childbirth safer.

Munro Kerr's Operative Obstetrics E-Book

The book was conceived with a purpose of updating practicing gynecologists in the ever-changing field of medicine. We hope this book refreshes the readers on a wide variety of topics. The book for the first time brings to the readers the concept of obstetric High Dependency Unit and Intensive Care Unit. Although this has been the practice in the west, this concept needs to be introduced in many countries to optimally manage high-risk obstetric patients. The definition and management of placenta previa have changed over the years with more focus on conservative management and a greater emphasis.

Gynaecology, Obstetrics, and Reproductive Medicine in Daily Practice is a unique publication aimed at the non-academic practicing gynaecologist, and students alike. The papers included in the book are written by invited speakers who attended the 15th Congress of Infertility, Gynaecology and Obstetrics. All the information is important to both doctors in training as well as qualified gynaecologists. Certain sections are interesting to fertility specialists as well as midwives. This is a useful tool to refresh and enhance skills in the fields of gynaecology, urogynaecology, obstetrics and reproductive medicine. The emphasis has been put on accomplishments achieved as opposed to ongoing controversies in the field. The book has a clear, primary target group. The book provides refresher and enhancing opportunities for all subspecialisations: gynaecology, urogynaecology, obstetrics and reproductive medicine Emphasis on the consensus achieved rather than ongoing controversies

Prenatal Care, An Issue of Primary Care Clinics in Office Practice - E-Book

Postpartum Haemorrhage (PPH) is commonly defined as a blood loss of 500 ml or more within 24 hours after birth. PPH is the leading cause of maternal mortality in low-income countries and the primary cause of nearly one quarter of all maternal deaths globally. Most deaths resulting from PPH occur during the first 24 hours after birth: the majority of these could be avoided through the use of prophylactic uterotonics during the third stage of labour and by timely and appropriate patient management. Improving health care for women during childbirth in order to prevent and treat PPH is an essential step towards the achievement of the Millennium Development Goals. The primary objective of this guideline therefore is to provide a foundation for the strategic policy and programme development needed to ensure the sustainable implementation of effective interventions for reducing the global burden of PPH.

Gynaecology, Obstetrics and Reproductive Medicine in Daily Practice

Developed to improve patient safety during labor and delivery, the OB F.A.S.T. (Obstetrical Feasible Approach to Safety Training) simulation program is a proven, award-winning resource is designed for all members of the interdisciplinary obstetrics team to use together. Written by Dr. Giancarlo Mari, who developed the program and currently trains providers around the U.S. and the world, this volume helps teams strengthen their common knowledge of obstetric emergencies. This knowledge is then applied to rehearse emergencies together and prepare team members to provide a safe labor and delivery experience for every mother and child. Features easy-to-follow images and diagrams to reinforce team knowledge of common obstetric emergencies, from cardiac arrest and anesthesia considerations to intrapartum fetal monitoring and amniotic fluid embolism. Offers suggestions for how to run a simulation drill, as well as key points for debriefing and documentation. Includes essential background information to facilitate quick reference and skills checklists to evaluate team performance. Designed for every member of the obstetric team - from those who are new to the field to practitioners with years of experience.

The Registrar-General's Statistical Review of England and Wales

This practical handbook presents evidence-based guidelines for the identification and management of postnatal health needs. It reviews the evidence on the physical and psychological postpartum health problems experienced by women, and the primary management of these, and facilitates individualised care. The ten guidelines were developed by experts in postpartum health as part of a large randomised controlled trial and were peer reviewed by nationally acknowledged experts in each subject area. The guidelines were designed for use by midwives and incorporate criteria for referral, but will also be useful for other health professionals and for women. Leaflets presenting a summary of recommended management are held in a pocket inside the back cover, for ease of regular use.

Myles' Textbook for Midwives E-Book

A Practical Guide to Third Trimester of Pregnancy & Puerperium is a comprehensive resource for the management of the final stage of pregnancy and its complications. Complications covered include pre-term labour, pre-labour rupture of membranes, post-term pregnancy, placental adhesive disorders, and umbilical cord abnormalities. Enhanced by over 120 images and tables, providing quick reference information for obstetricians and gynaecologists.

Advances in Obstetrics and Gynecology (Vol. 3)

The midwife's role is examined in the community and family-health context in this handbook on effective maternal and newborn care for midwives and other healthcare providers. The skills, competencies, and knowledge required to make informed decisions about neo- and postnatal care are covered, including anatomy and the physiology of reproduction, high-risk pregnancies, and labor and birth. Theoretical and practical issues illuminate a midwife's role in the prevention of illness in mothers and babies, with attention to the unique challenges of midwifery in developing nations. Insights from current research studies and critical questions about midwife practice will help those new to health care understand the unique challenges of this form of health-service delivery.

Report on Confidential Enquiries Into Maternal Deaths in England and Wales

Postpartum hemorrhage is a major cause of maternal mortality - especially in the developing world. Estimates vary but it can confidently be stated that well over 250,000 women die as a result of the condition every year. Many of these deaths could be prevented by better and more appropriate treatment, delivered within a time-critical framework. The objective of this book is to bring together within a single volume the most up to date information about the epidemiology, diagnosis and management of postpartum hemorrhage. Whilst much has been published on the subject a truly comprehensive synthesis of this kind has never before been attempted. This volume sets out, therefore, to provide physicians with an overall clinical perspective that has hitherto been unavailable. The volume is essentially practical in orientation addressing specific issues that confront any obstetrician responsible for the management of postpartum hemorrhage. In particular it features new surgical techniques that have been shown to be markedly successful and straight forward to apply, and which have clear

advantages over emergency hysterectomy in many instances. Other important issues that are reviewed in detail include causation, prevention, therapy for atonic and non-atonic conditions, and long term consequences. Written by an international team of specially invited experts, this book should meet a genuine need. In particular it is hoped it will contribute in a practical way to management of postpartum hemorrhage in developing countries where scarcity of resources may be compounded by a lack of clinically reliable information about the latest therapeutic advances.

Journal of the American Medical Association

Completely revised to meet the latest Board of Nurse Examiners criteria for the NCLEX-RN®, this review book contains over 3,500 questions and answers with rationales covering all areas included on the exam. Two substantially updated introductory chapters discuss studying and test-taking strategies and describe the exam format in detail. Subsequent sections cover adult care, psychiatric care, maternal-neonatal care, and care of the child, plus chapters on leadership and management and law and ethics. Six 75-question comprehensive tests appear at the end of the book. This Third Edition also includes nearly 100 new alternate-format questions.
