Help your clients' relationships survive infidelity! In the Handbook of the Clinical Treatment of Infidelity, a panel of seasoned experts reflects on issues central to affairs, and on how to help couples heal and learn from them. First, editors Fred P. Piercy, Katherine M. Hertlein, and Joseph L. Wetchler provide an essential overview of infidelity theory, research, and treatment. They discuss the effect of infidelity on couples and delineate three types of infidelity—emotional, physical, and infidelity including aspects of both. They review the relatively new role of the Internet in infidelity and explore infidelity within the context of comarital relationships. Finally, they discuss the overarching theories and common models used in infidelity treatment. Also in the Handbook of the Clinical Treatment of Infidelity: Susan M. Johnson, the co-developer of Emotionally Focused Therapy (EFT), discusses affairs through the lens of attachment theory, and shows how EFT provides a way to

changes from DSM-IV to DSM-5®, some of the foremost scholars in each area address eating disorders in adults, children and adolescents, and special populations. Chapters on assessment and treatment, along with accompanying videos, offer comprehensive, state-of-the-art coverage that will benefit clinicians in practice, such as psychiatrists and psychotherapists, as well as mental health trainees. Clinicians will find the following features and content especially useful: Five full chapters on assessment tools cover the evolution of measures and instruments, from the primitive beginnings to the cutting edge of new technological applications. The challenges of diagnosing feeding and eating disorders in children and adolescents are also addressed. Treatment chapters cover restrictive eating, including anorexia nervosa and avoidant/restrictive food intake disorder, binge eating, including bulimia nervosa and binge-eating disorder, and other eating problems, including pica, rumination disorder, and night eating syndrome. One chapter focuses on eating problems among men and boys, who have diverse presentations, and the motivations and body image disturbances that may differ from those typically found among females. Because attunement to culturally and socially patterned characteristics of clinical presentation is essential to an informed and accurate mental health assessment, an entire chapter is devoted to clinical effectiveness in multicultural and cross-cultural settings. Each chapter ends with key clinical points to help readers focus on the most salient content, test comprehension, and review for examinations.
