Empire Lost

The Gramophone

Despite the loss of the French Empire, France and its former colonies are still bound by a common historical past. With the new global promotion of la Francophonie, the relation between the various constituencies of the French-speaking regions of the world is reexamined and debated in this book, through the conversation between scholars dealing with diverse texts and contexts that present the colonial contact and its imprint. The book illustrates how, in France and in its other worlds, that contact, its repercussions, and its memory are lived and expressed today in a variety of textual representations. The historical contact between France and its other worlds has given birth to new kinds of cross-cultural expressions in the arts, in literature, and in aesthetics, establishing interrelations and generating appropriations from both sides of the Hexagon frontier, highlighting the fluidity and the permeability of its cultural borders. The book subtext tells that the frontier between France and its other worlds is no more an unshakable geographical, political, and cultural limit, but rather a line that has become mobile, fluctuating, and permeable, and across which currents, ideas, sensitivities, and creativity are expressed, bearing testimony to vitality and diversity but also to a cross-fertilization of cultures and societies (re) crossing or meeting at that line. Seen from this latter perspective, the book comes also as an interrogation of the inclusiveness or exclusiveness of the words francophone and Francophonie, and, at an academic level, a mutual exclusion of French and Francophone Studies.

Taking the Enlightenment and the feminist tradition to which it gave rise as its historical and philosophical coordinates, *Feminism and the Politics of Travel After the Enlightenment* explores the coincidence of feminist vindications and travel in the late eighteenth and nineteenth centuries, the way travel's utopian dimension and feminism's utopian ideals have intermittently fed off each other in productive ways. Travel's gender politics is analyzed in the works of J.-J. Rousseau, Mary Wollstonecraft, Stéphanie-Félicité de Genlis, Germaine de Staël, Frances Burney, Flora Tristan, Suzanne Voilquin, Gustave Flaubert, George Sand, Robyn Davidson, and Sara Wheeler.

Starting from Zero

In this stunning follow-up to his best-selling book, *The Five Temptations of a CEO*, Patrick Lencioni offers up another leadership fable that's every bit as compelling and illuminating as its predecessor. This time, Lencioni's focus is on a leader's crucial role in building a healthy organization--an often overlooked but essential element of business life that is the linchpin of sustained success. Readers are treated to a story of corporate intrigue as the frustrated head of one consulting firm faces a leadership challenge so great that it threatens to topple his company, his career, and everything he holds true about leadership itself. In the story's telling, Lencioni helps his readers understand the disarming simplicity and power of creating organizational health, and reveals four key disciplines that they can follow to achieve it.

Genius and Eminence

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

This book takes a pragmatic approach to deploying state-of-the-art optical networking equipment in metro-core and backbone networks. The book is oriented towards practical implementation of optical network design. Algorithms and methodologies related to routing, regeneration, wavelength assignment, sub rate-traffic grooming and protection are presented, with an emphasis on optical-bypass-enabled (or all-optical) networks. The author has emphasized the economics of optical networking, with a full chapter of economic studies that offer guidelines as to when and how optical-bypass technology should be deployed. This new edition contains: new chapter on dynamic optical networking and a new chapter on flexible/elastic optical networks. Expanded coverage of new physical-layer technology (e.g., coherent detection) and its impact on network design and enhanced coverage of ROADM architectures and properties, including colorless,

directionless, contentionless and gridless. Covers 'hot' topics, such as Software Defined Networking and energy efficiency, algorithmic advancements and techniques, especially in the area of impairment-aware routing and wavelength assignment. Provides more illustrative examples of concepts are provided, using three reference networks (the topology files for the networks are provided on a web site, for further studies by the reader). Also exercises have been added at the end of the chapters to enhance the book's utility as a course textbook.

Good Derivatives

Through the eyes of an inventor of new markets, *Good Derivatives: A Story of Financial and Environmental Innovation* tells the story of how financial innovation – a concept that is misunderstood and under attack – has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative style, *Good Derivatives* will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.
