The Medusa and the Snail

The medusa is a tiny jellyfish that lives on the ventral surface of a sea slug found in the Bay of Naples. Readers will find themselves caught up in the fate of the medusa and the snail as a metaphor for eternal issues of life and death as Lewis Thomas further extends the exploration of man and his world begun in The Lives of a Cell. Among the treasures in this magnificent book are essays on the human genius for making mistakes, on disease and natural death, on

The Power of Beauty

The Beak of the Finch

Reflections on how physical appearance, and beliefs about it, affect women's lives from a #1 bestselling author who's "enormously fun to read" (The New York Times). Beauty and appearance play a pervasive role in our culture. Here, the #1 New York Times-bestselling author of the groundbreaking, controversial bestseller *My Secret Garden* delves into beauty's influence on popular media and the psyche of modern women. Combining in-depth cultural analysis with personal anecdotes, sexology, and individual case studies, Nancy Friday explores the dissatisfaction women feel about their bodies—and how it affects their sexual freedom. Her analysis is broad-reaching, examining how popular culture, advertising, stereotypes of women in the workplace, the sexual liberation of the 1960s, and the dynamics of family relationships put pressure on women to live up to an impossible feminine ideal. Also published under the title *Our Looks, Our Lives*

Our ability to be conscious of the world around us is often discussed as one of the most amazing yet enigmatic processes under scientific investigation today. However, our ability to imagine the world around us in the absence of stimulation from that world is perhaps even more amazing. This capacity to experience objects or scenarios through imagination, that do not necessarily exist in the world, is perhaps one of the fundamental abilities that allows us successfully to think about, plan, run a dress rehearsal of future events, re-analyze past events and even simulate or fantasize abstract events that may never happen. Empirical research into mental imagery has seen a recent surge, due partly to the development of new neuroscientific methods and their clever application, but also due to the increasing discovery and application of more objective methods to investigate this inherently internal and private process. As the topic is cross hosted in *Frontiers in Perception Science* and *Frontiers in Human Neuroscience*, we invite researchers from different fields to submit opinionated but balanced reviews, new empirical, theoretical, philosophical or technical papers covering any aspect of mental imagery. In particular, we encourage submissions focusing on different sensory modalities, such as olfaction, audition somatosensory etc. Similarly, we support submissions focusing on the relationship between mental imagery and other neural and cognitive functions or disorders such as visual working memory, visual search or disorders of anxiety. Together, we

hope that collecting a group of papers on this research topic will help to unify theory while providing an overview of the state of the field, where it is heading, and how mental imagery relates to other cognitive and sensory functions.

An electrifying new voice in military fiction, Joe Buff has written a riveting and utterly realistic submarine adventure. Jeffrey Fuller is going back to war. Commander Fuller has distinguished himself in battle, becoming one of America's most inspirational heroes in its war with the Berlin-Boer Axis. Time and time again, Fuller has taken his crew of elite submariners into the most dangerous waters in the world, matching wits and weapons with the best of Germany's and South Africa's fighting force, and every time he has emerged the victor. But this time, Fuller is given an impossible mission. As the captain of America's most technologically advanced tactical nuclear submarine, Fuller is told that the Allies will lose the war unless two conditions are met. The only problem: if Fuller devotes his time to achieving one of his goals, he will sacrifice the other. With the war hanging in the balance, Fuller must accomplish the impossible, or he will lose not only his life, but the war itself.

Winner of the Pulitzer Prize Winner of the Los Angeles Times Book Prize On a desert island in the heart of the Galapagos archipelago, where Darwin received his first inklings of the theory of evolution, two scientists, Peter and Rosemary Grant, have spent twenty years proving that Darwin did not know the strength of his own theory. For among the finches of Daphne Major, natural selection is neither rare nor slow: it is taking place by the hour, and we can watch. In this dramatic story of groundbreaking scientific research, Jonathan Weiner follows these scientists as they watch Darwin's finches and come up with a new understanding of life itself. *The Beak of the Finch* is an elegantly written and compelling masterpiece of theory and explication in the tradition of Stephen Jay Gould. With a new preface.

relationship between nature and human society, the roles of biology education need to be rethought to respond to issues and changes to life in this biocentury. This book is a compilation of selected papers from the Twenty Third Biennial Conference of the Asian Association for Biology Education 2010. The title, *Biology Education for Social and Sustainable Development*, demonstrates how rethinking and reconstruction of biology education in the Asia-Pacific region are increasingly grounded in deep understandings of what counts as valuable local knowledge, practices, culture, and ideologies for national and global issues, and education for sustainable development. The 42 papers by eminent science educators from Australia, China, Philippines, Singapore, Taiwan, and the U.S., represent a diversity of views, understandings, and practices in biology education for sustainable development from school to university in diverse education systems and social-cultural settings in the Asia-Pacific region and beyond. The book is an invaluable resource and essential reference for researchers and educators on Asian perspectives and practices on biology education for social and sustainable development.

represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
