Compilations of cases with commentary – in Japanese Hanrei Hyakusen – often provide the most practical way to obtain a quick and reliable understanding of a specific field of law, as well as guidance on how best to proceed in specific situations. In this respect, leading cases much more than statutory provisions are essential for understanding the reality of Japanese commercial law. This incomparable book compiles 72 of the most important commercially relevant Japanese court decisions in the fields of civil law, labour law, company law, financial transactions, intellectual property, antitrust, conflict of laws, and arbitration. Each decision is presented in English translation and is accompanied by a practical and explanatory commentary by an expert in the field, be it from academia or private practice. There are 50 commentators in all, brought together here to honour the 60th birthday of Harald Baum, widely regarded as one of the world's foremost scholars on Japanese business law. The cases encompass a wide reach of causes of action in fields such as: breach of contract; tort liability; product liability; unjust enrichment; collective bargaining; shareholders' rights; directors' duty of care; political donations; insider trading; patent infringement; parallel imports; trade mark rights; unfair competition; publicity rights; price fixing; arbitration agreements; and recognition of foreign judgements. Whether serving as practical guidance or as a basis for academic research, this compilation will be warmly welcomed by practicing lawyers, teachers and students of Japanese and international law, and all others who need to understand the various fields of Japanese commercial law.

Kingdom Hearts Birth by Sleep: The Novel (light novel)

Notes on the Rubrics of the Communion Office

This graduate-level textbook introduces fundamental concepts and methods in machine learning. It describes several important modern algorithms, provides the theoretical underpinnings of these algorithms, and illustrates key aspects for their

application. The authors aim to present novel theoretical tools and concepts while giving concise proofs even for relatively advanced topics. Foundations of Machine Learning fills the need for a general textbook that also offers theoretical details and an emphasis on proofs. Certain topics that are often treated with insufficient attention are discussed in more detail here; for example, entire chapters are devoted to regression, multi-class classification, and ranking. The first three chapters lay the theoretical foundation for what follows, but each remaining chapter is mostly self-contained. The appendix offers a concise probability review, a short introduction to convex optimization, tools for concentration bounds, and several basic properties of matrices and norms used in the book. The book is intended for graduate students and researchers in machine learning, statistics, and related areas; it can be used either as a textbook or as a reference text for a research seminar.

Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the *Wall Street Journal*, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.
