## **Technical Review - The Society of Experimental Test Pilots**

An analytical study was conducted to define desired functional characteristics of modern, synthetic flight training equipment for the purpose of producing potentially better qualified aviators through a combination of aircraft and simulator training. Relevant training which aviators receive in preparation for specific aircraft duties and training requirements for Coast Guard aviation are discussed. To meet these objectives, a comprehensive study of aviator requirements during operational missions was undertaken. The search and rescue (SAR) mission was

chosen for the analysis, and missions were chosen to represent operations in each of the four aircraft used by the Coast Guard primarily for the SAR.

### **Flight Manual**

Compiled by the Federal Aviation Administration, this handbook is the ultimate technical manual for anyone who flies or wants to learn to fly a helicopter. If you're preparing for private, commercial, or flight instruction pilot certificates, it's more than essential reading—it's the best possible study guide available, and its information can be life-saving. In authoritative and easy-to-understand language, here are explanations of general aerodynamics and the aerodynamics of flight, navigation, communication, flight controls, flight maneuvers, emergencies, and more. Also included is an extensive glossary of terms ensuring that even the most technical language can be easily understood. The Helicopter Flying Handbook is an indispensable text for any pilot who wants to operate a helicopter safely in a range of conditions. Chapters cover a variety of subjects including helicopter

components, weight and balance, basic flight maneuvers, advanced flight maneuvers, emergencies and hazards, aeronautical decision making, night operations, and many more. With full-color illustrations detailing every chapter, this is a one-of-a-kind resource for pilots and would-be pilots.

The Grumman F8F Bearcat was designed to defeat the nimble Japanese fighter aircraft that appeared at the end of WWII. The conflict ended before the Bearcat could be placed into service, and although it eventually saw combat with the French in the Indo-China war, it never flew in harm's way in the U.S. Navy. One of the best piston-powered fighters ever built, the F8F could achieve a cruising speed

of over 420 mph. In 1946 a Bearcat set a time-to-climb record of 10,000 feet in 94 seconds, a feat not matched until the advent of high-performance jet fighters nearly a decade later. Originally printed by Grumman and the U.S. Navy, this Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified 'Restricted', the manual was declassified and is here reprinted in book form. This affordable facsimile has been slightly reformatted. Care has been taken however to preserve the integrity of the text.

The C-1430BL ski-wheel aircraft is a medium range cargo, troop, or air evacuation transport manufactured by the Georgia Division of the Lockheed Aircraft Corporation for the U.S. Navy. The aircraft is designed to operate on skis from snow and ice surfaces as well as from concrete runways. The ski-wheel combination consists of two main skis and one nose ski attached to the normal landing gear. The performance of the ski-equipped C-130BL is lower than that of the C-130B. Take-off and landing distances (on concrete runways) have been increased 100 to 200 feet and 450 to 750 feet, respectively. The climb performance of the C-130BL is less than that of the C-130B and is closed to that estimated by the contractor in the C-130BL Substantiating Data Report. The stability and control characteristics in general appear identical to those of the C-130B. There are no noticeable destabilizing effects resulting from the ski installation.
