### **Ambulatory Peritoneal Dialysis**

The Fourth International Congress of Peritoneal Dialysis was held in Venice, Italy, June 29 to July 2, 1987. By this time peritoneal dialysis had emerged as a treatment for a substantial fraction of patients with end-stage renal disease and countless numbers of patients with acute renal failure. This treatment is now practiced worldwide and is the life-sustaining treatment for about 40,000 patients with chronic renal failure, representing 15 to 20% of dialysis therapy in about 1000 centers. It is not surprising, therefore, that the number of health professionals engaged in the investigation and the application of the treatment has also grown exponentially. The First International Symposium on Peritoneal Dialysis, organized

by Dr. A. Treviiiio-Be cerra in Chapala, Mexico, in 1978, brought together a group of pioneers when continuous ambulatory peritoneal dialysis was in its infancy. In 1981, Dr. G. M. Gahl chaired the Second Symposium, in West Berlin, when the technique and professional interest were growing considerably. By 1984, when Dr. I. F. Winchester and I organized the Third Symposium, the presented papers exceeded 100 and there were about 1000 attendees. At that time, it was deemed appropriate to form a more organized group and the International Society for Peritoneal Dialysis was founded. One of the first actions of the Society was to choose from among several applicants Dr.

### **Goldfrank's Toxicologic Emergencies**

The impetus for this book came from the recent appearance of single specialty books pertaining to reoperative surgery on various organs in the pelvis, as well as from the recognition that several different disciplines are involved with the challenges of reoperative pelvic surgery. Surgeons often encounter challenging dilemmas involving organ systems that have historically been attended to by surgeons representing closely related but distinct specialty areas. With increasing sophistication and knowledge about management of anatomically adjacent organs by the specialties of gynecologic oncology, gynecology, urology, and colon and rectal surgery, as well as the emergence of specialty training programs in urogynecology and pelvic floor disorders, we thought it appropriate and timely to create a textbook acknowledging this increasing knowledge and interspecialty collaboration. To this end, where appropriate, we have included collaborative authors from each of the specialties, any of whom may be called upon to address a particular anatomic area. It seems inevitable that situations will arise in which the collaborative expertise of several separate specialties may converge to provide surgeons the benefit of the combined thought processes that would prove invaluable when such difficult problems are encountered. With this in mind, the editors, from the fields of gynecologic oncology, urology, and colon and rectal surgery, identified experts in their own fields who could best contribute to the management of specific problem areas. For

example, since reoperations for endometriosis may involve uterus, adnexae, ovaries, or the colorectum, the chapter concerning this condition has been coauthored by specialists in colorectal surgery and gynecologic oncology. We have been fortunate to find experts who have collaborated to bring available evidence-based medicine, best demonstrated practices, and personal experience to their contributions.

### **Tropical Dermatology**

The book provides an authoritative source of knowledge about these problematic disorders. It bridges the gap between clinical recognition and the new molecular medicine. The editors, distinguished clinicians and geneticists, assembled an internationally renowned group of collaborators, many of them the experts who first described a particular disorder or established its present accepted definition. They have written a practical, comprehensive guide to the recognition, investigation and management of more than 60 recognised phakomatoses.

suggestive of increasingly older society, it would be prudent for health care providers to better prepare for such changes. By including physiology, disease, nutrition, pharmacology, pathology, radiology and other relevant associated topics, Geriatric Gastroenterology fills the void in the literature for a volume devoted specifically to gastrointestinal illness in the elderly. This unique volume includes provision of training for current and future generations of physicians to deal with the health problems of older adults. It will also serve as a comprehensive guide to practicing physicians for ease of reference. Relevant to the geriatric age group, the volume covers epidemiology, physiology of aging, gastrointestinal physiology, pharmacology, radiology, pathology, motility disorders, luminal disorders, hepatobiliary disease, systemic manifestations, neoplastic disorders, gastrointestinal bleeding, cancer and medication related interactions and adverse events, all extremely common in older adults; these are often hard to evaluate and judge, especially considering the complex aging physiology. All have become important components of modern medicine. Special emphasis is be given to nutrition and related disorders. Capsule endoscopy and its utility in the geriatric population is also covered. Presented in simple, easy to read style, the volume includes numerous tables, figures and key points enabling ease of understanding. Chapters on imaging and pathology are profusely illustrated. All chapters are written by specialists and include up to date scientific information. Geriatric Gastroenterology is of great utility to residents in internal medicine, fellows in gastroenterology and geriatric medicine as well as gastroenterologists, geriatricians and practicing

physicians including primary care physicians caring for older adults.
