The SAGE Encyclopedia of Intellectual and Developmental Disorders

The progression from newborn to sophisticated language user in just a few short years is often described as wonderful and miraculous. What are the biological, cognitive, and social underpinnings of this miracle? What major language development milestones occur in infancy? What methodologies do researchers employ in studying this progression? Why do some become adept at multiple languages while others face a lifelong struggle with just one? What accounts for declines in language proficiency, and how might such declines be moderated? Despite an abundance of textbooks, specialized monographs, and a couple of academic handbooks, there has been no encyclopedic reference work in this area--until now. The Encyclopedia of Language Development covers the breadth of theory and research on language development from birth through adulthood, as well as their practical application. Features: This affordable A-to-Z reference includes 200 articles that address such topic areas as theories and research tradition; biological perspectives; cognitive perspectives; family, peer, and social influences; bilingualism; special populations and disorders; and more. All articles (signed and authored by key figures in the field) conclude with cross reference links and

suggestions for further reading. Appendices include a Resource Guide with annotated lists of classic books and articles, journals, associations, and web sites; a Glossary of specialized terms; and a Chronology offering an overview and history of the field. A thematic Reader's Guide groups related articles by broad topic areas as one handy search feature on the e-Reference platform, which includes a comprehensive index of search terms. Available in both print and electronic formats, Encyclopedia of Language Development is a must-have reference for researchers and is ideal for library reference or circulating collections.

Encyclopedia of Human Development

Winner of the 2020 Textbook Excellence Award from the Textbook & Academic Authors Association (TAA) Chronologically organized, *Child Development From Infancy to Adolescence, Second Edition* presents topics within the field of child development through unique and highly engaging Active Learning opportunities. The Active Learning features foster a dynamic and personal learning process for students. Within each chapter, authors Laura E. Levine and Joyce Munsch introduce students to a wide range of real-world applications of psychological research to child development. Pedagogical features help students discover the excitement of studying child development and equip them with skills they can use long after completing the course. This title is accompanied by a complete teaching and learning package. Contact your SAGE representative to

Cognitive Psychology

The Fifth Edition of Scott A. Miller's classic Developmental Research Methods presents an overview of methods to prepare students to carry out, report on, and evaluate research on human development across the lifespan. The book explores every step in the research process, from the initial concept to the final written product, covering

conceptual issues of experimental design, as well as the procedural skills necessary to translate design into research. Incorporating new topics, pedagogy, and references, this edition conveys an appreciation of the issues that must be addressed, the decisions that must be made, and the obstacles that must be overcome at every phase in a research project, capturing both the excitement and the challenge of doing quality research on topics that matter.

The SAGE Handbook of Developmental Disorders

Cognitive Psychology In and Out of the Laboratory presents balanced, up-to-date coverage of cognitive psychology and shows readers that research conducted in the lab truly does impact the real world. Using her signature, accessible writing style, author Kathleen M. Galotti masterfully connects cognitive psychology to students' everyday lives through current, relevant examples. The Sixth Edition has been updated to reflect the rapidly changing field of cognitive psychology with new references, streamlined content that gives more attention to key topics like memory, and material on advances in research that enhance our understanding of how people acquire and use information.

Cognitive Modeling

Counseling Children and Adolescents: Connecting Theory, Development, and Diversity reviews the most relevant theoretical approaches for counseling

children and focuses on connecting key theories to application using case studies. The book's approach is broad, addressing a range of ages, approaches, and interventions that are applicable to varied settings. Sondra Smith-Adcock and Catherine Tucker have laid out an integrated framework that focuses on development and diversity. In addition, a unique aspect of this text is its focus on neuroscience, the developing brain, and the impact of early childhood trauma on development. Each chapter in the text includes a set of case illustrations, guided activities for the student to apply independently and in the classroom, and a list of resources in print, on the web, and on film. *Counseling Children and Adolescents: Connecting Theory, Development, and Diversity* is part of the SAGE Counseling and Professional Identity Series, which targets specific competencies identified by CACREP (Council for Accreditation of Counseling and Related Programs). To learn more about each text in the series, please visit www.sagepub.com/cpseries.

Encyclopedia of Language Development

From award-winning author Tara L. Kuther comes *Adolescence in Context*, a topically oriented text that connects learners to the science that shapes our understanding of today's teenagers and young adults. The book is organized around three core themes: the centrality of context, the importance of research, and the applied value of developmental science. The text presents classic research, current research, and foundational theories, which Kuther frames in real-life

contexts such as gender, race and ethnicity, and socioeconomic status. Students will come away with an understanding of the book's themes and material that they will immediately be able to apply to their own lives and future careers.

Cognitive Psychology In and Out of the Laboratory

According to the CDC “about one in six, or about 15%, of children aged 3 through 17 years have one or more developmental disabilities,” such as ADHD, autism spectrum disorders, cerebral palsy, intellectual disability, and learning disability. Intellectual disorders are characterized by significant limitations in both intellectual functioning and in adaptive behavior, which covers many everyday social and practical skills, impacting learning, reasoning, problem solving, and other cognitive processes. These disabilities originate before the age of 18 and continue across the life span. Developmental disorders are chronic disabilities that can be cognitive or physical or both. The disabilities appear before the age of 22 and are likely to progress across the lifespan. Some developmental disorders are largely physical issues, such as cerebral palsy or epilepsy. Some individuals may have a disorder that includes a physical and intellectual disability; for example, Down syndrome or fetal alcohol syndrome. Intellectual and developmental disorders are significant and growing issues that are studied across a number of disciplines. The SAGE Encyclopedia of Intellectual and Developmental Disorders is aimed at students

interested in psychology, counseling, education, social work, psychiatry, health sciences, and more. This encyclopedia will provide an in-depth look at a wide range of disorders, alongside interventions, the latest research translated for an undergraduate audience, historical context, and assessment tools for higher-level students. We will take a truly interdisciplinary approach by also covering sociocultural viewpoints, policy implications, educational applications, ethical issues, and more.

Child and Adolescent Development

An Introduction to Theories of Human Development provides a comprehensive view of the primary theoretical models of human development including those from the biological, psychoanalytic, behavioral, and cognitive developmental perspectives. Along with a brief discussion of a historical background for each of these approaches, this book examines the application of these theories to various aspects of human development, such as the effectiveness of early intervention, individual differences, adolescence, and sociobiology.

Individual Differences in Language Development

"This book covers the basics of traditional educational testing, measurement, and evaluation theory and methodology, as well as sociopolitical issues and trends influencing the future of that research and practice"--Publisher's description.

Encyclopedia of Research Design

At the end of the day, what is crucial is to enable educationalists to promote and apply their own metatheories and models of child development which they feel comfortable with and which enable children to develop. Peter Sutherland should be credited with making a significant contribution towards achieving this fundamental goal' - "Educational Psychology in Practice " this book deserves to become a classic in the field. Will appeal alike to academics and students in higher education, and to serving teachers- "BPS: Educational Review Section " This book provides a general outline of the dominant schools of thought on cognitive development, with a focus on Piaget. His views are outlined and a range of critical responses and alternatives are detailed. The author examines the application of these schools of thought to teaching pre-school, primary and secondary children. Each chapter includes a summary and questions for discussion. The book concludes with a glossary of terms.

Adolescence in Context

This volume highlights identity development from early adolescence through late adulthood and provides a valuable resource for university students as well as human services professionals. This Second Edition of Identity Development: Adolescence Through Adulthood presents an overview of the five general theoretical orientations to the question of what constitutes identity, as well as the strengths and

limitations of each approach. The volume then describes key biological, psychological, and contextual issues during each phase of adolescence and adulthood. Following these major adolescence and adulthood sections, selected issues that may pose identity challenges for some are presented.

Recent Theories of Human Development

Responding to an explosion of new mathematical and computational models used in the fields of cognitive science, this book provides simple tutorials concerning the development and testing of such models. The authors focus on a few key models, with a primary goal of equipping readers with the fundamental principles, methods, and tools necessary for evaluating and testing any type of model encountered in the field of cognitive science.

Child Development

Cognitive Development and Individual Variability

Recipient of the 2017 Most Promising New Textbook Award from the Textbook & Academic Authors Association (TAA) Chronologically organized, Lifespan Development: Lives in Context offers a unique perspective on the field by focusing on the importance of context—examining how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow

and change. Author Tara L. Kuther integrates cutting-edge and classic research throughout the text to present a unified story of developmental science and its applications to everyday life. Robust pedagogy, student-friendly writing, and an inviting design enhance this exciting and inclusive exploration of the ways in which context informs our understanding of the lifespan.

Child and Adolescent Development in Context

Covering core topics such as the development of attachment, social relations, cognitive and language development and social and cultural contexts of development, this introductory text addresses the core knowledge domain of developmental psychology. It provides concise and focused coverage of the central concepts, research and debates, while developing students' higher level skills. Key chapters cover development across the lifespan, including the prenatal period, infancy, childhood, adolescence and adulthood, while activities help readers build the underpinning generic critical thinking and transferable skills they need to become independent learners, and to meet the requirements of their programme of study.

Children's Thinking

Like children themselves, development is dynamic. In the chronologically organized *Child and Adolescent Development in Context*, award-winning author Tara

Cognitive Development

As with his best-selling first edition, Ronald T. Kellogg seeks to provide students with a synthesis of cognitive psychology at its best, encapsulating relevant background, theory, and research within each chapter. Understanding cognitive psychology now requires a deeper understanding of the brain than was true in the past. In his thoroughly revised second edition, the author highlights the tremendous contributions from the neurosciences, most notably neuroimaging, in recent years and approaches cognition in the context of both its development and its biological, bodily substrate.

Identity Development

The use of the cognitive interviewing method for survey question testing has proliferated and evolved over the past 30 years. In more recent years the method has been applied to the evaluation of information letters and leaflets and to research consent forms. This book provides a practical handbook for implementing cognitive interviewing

methods in the context of applied social policy research, based on the approach used by the authors at the NatCen Social Research (NatCen) where cognitive interviewing methods have been used for well over a decade. The book provides a justification for the importance of question testing and evaluation and discusses the position of cognitive interviewing in relation to other questionnaire development and evaluation techniques. Throughout the book, the focus is on providing practical and hands-on guidance around elements such as sampling and recruitment, designing probes, interviewing skills, data management and analysis and how to interpret the findings and use them to improve survey questions and other documents. The book also covers cognitive interviewing in different survey modes, in cross national, cross cultural and multilingual settings and discusses some other potential uses of the method.

Child and Adolescent Life Stories

Metacognition is the first textbook to focus on people's extraordinary ability to evaluate and control their cognitive processes. This comprehensive text covers both theoretical and empirical metacognitive research in educational, developmental, cognitive and applied psychology. Authors John Dunlosky and Janet Metcalfe address many of the key questions that have inspired scientists to pursue research in this domain. To answer these and many other questions, the authors assess major theoretical themes and programmatic research in the field. The authors also include chapters that define the scope of

metacognition and cover its historical origins. Not only do they describe well-received theories about the nature of metacognition, but they also highlight unresolved mysteries currently on the cutting-edge of research. Key Features Emphasizes the practical relevance of theory and research in metacognition to learning with the use of "Application" boxes Introduces students to important questions that have yet to be answered by the metacognitive research literature with the inclusion of "Mystery" boxes Provides three easy-to-conduct demonstrations (e.g., tip-of-the-tongue experience, delayed-judgment-of-learning effect, etc.) that students can try themselves Offers brief biographies that introduce students to some of the most influential leaders in metacognition Includes a general summary at the end of each chapter Intended Audience This text is an ideal resource for undergraduate cognitive psychology students. It also serves as comprehensive handbook for more advanced students and psychological scientists engaged in the study of metacognitive processes.

The Skills That Matter

The SAGE Encyclopedia of Human Communication Sciences and Disorders is an in-depth encyclopedia aimed at students interested in interdisciplinary perspectives on human communication—both normal and disordered—across the lifespan. This timely and unique set will look at the spectrum of communication disorders, from causation and prevention to testing and assessment; through rehabilitation, intervention,

and education. Examples of the interdisciplinary reach of this encyclopedia: A strong focus on health issues, with topics such as Asperger's syndrome, fetal alcohol syndrome, anatomy of the human larynx, dementia, etc. Including core psychology and cognitive sciences topics, such as social development, stigma, language acquisition, self-help groups, memory, depression, memory, Behaviorism, and cognitive development Education is covered in topics such as cooperative learning, special education, classroom-based service delivery The editors have recruited top researchers and clinicians across multiple fields to contribute to approximately 640 signed entries across four volumes.

SAGE Directions in Educational Psychology

Educational psychology is a broad field characterized by the study of individuals in educational settings and how they develop and learn. It incorporates information from such sub-disciplines such as developmental psychology, human development across the life span, curriculum and instruction, motivation, and measurement and assessment. Neil Salkind has mined the rich and extensive backlist of SAGE education and psychology journals to pull together a collection of almost 100 articles to be the definitive research resource on education psychology. Section One: Human Growth and Development focuses on the processes involved in human growth and development including ages and stages of development, different theoretical perspectives and

the role and effectiveness of early intervention among other topics. Section Two: Cognition, Learning and Instruction concentrates on the mechanisms, through which individuals learn and retain information. Section Three: Motivation explores why individuals seek out goals and what the mechanisms are that characterize this search as it relates to learning. Section Four: Measurement, Assessment and Statistics looks at the topics that are critical to understanding individual differences, the growth in the use of computers as assessment tools, qualitative and quantitative methods, statistical techniques and evaluation.

The SAGE Encyclopedia of Lifespan Human Development

Electronic Inspection Copy available for instructors here The Second Edition of An Introduction to Child Development has been fully updated to provide a comprehensive survey of the main areas of child development, from infancy through to adolescence. Equipping students with an appreciation of critical issues in the field and an understanding of empirical research that bears on the study of children, the text provides balanced coverage of topics and theoretical perspectives that represent both classic and cutting edge work in child development. In terms of new content, it now covers more on the biological foundations of development, plus new chapters on moral development and applied developmental psychology. The Second Edition includes the following features: - learning points - section & chapter summaries, - end-of-chapter glossaries - suggestions

for further reading - sample multiple choice questions
- sidebars featuring in depth discussions of key
research findings or points of debate within the field
of child development. The text comes with a
dedicated website with resources for both students
and instructors.

Human Development Theories

Education efforts are shifting from a focus on
accountability and testing to better preparing
students for higher education and the workplace by
increasing the focus on "social/emotional",
"employability" and/or "soft" skills. The trend of high
academic expectations and measurement to the
exclusion of all other skills is being displaced by
discussions of meaning and relevance in rigorous
education, allowing an opportunity for innovation and
creativity in how and what we teach students. In
response to this rising trend, this book covers
competencies such as self-regulation, goal-setting,
self-efficacy, assertiveness, conflict management and
networking.

Moral Development and Reality

Written in Kathleen M. Galotti's signature engaging
style, this text is a dynamic examination of cognitive
development from infancy through adolescence.
Updated and reorganized throughout, the Second
Edition of Cognitive Development weaves together a
variety of theoretical perspectives while considering
issues of research methodology. Introductory

chapters cover theoretical and developmental frameworks and are followed by chronologically arranged chapters, giving undergraduate and graduate students an understanding of the "whole" child in an accessible, intuitive framework.

Lifespan Development

Moral Development and Reality: Beyond the Theories of Kohlberg and Hoffman explores the nature of moral development, social behavior, and human interconnectedness. By comparing, contrasting, and going beyond the works of pre-eminent theorists Lawrence Kohlberg and Martin Hoffman, author John C. Gibbs addresses fundamental questions: What is morality? Can we speak validly of moral development? Is the moral motivation of behavior primarily a matter of justice or of empathy? Does moral development, including moments of moral inspiration, reflect a deeper reality? Moral Development and Reality elucidates the full range of moral development from superficial perception to a deeper understanding and feeling through social perspective-taking. Providing case studies and chapter questions, Gibbs creates a unique framework for understanding Kohlberg's and Hoffman's influential contributions.

The SAGE Encyclopedia of Human Communication Sciences and Disorders

By examining each theory through a cultural lens, Human Development Theories provides readers with

the unusual perspective of being able to step outside of our own cultural heritage and to view other cultures as being equally viable, reasonable, and comprehensible. . . . The writing is crystal clear, and the author has done a superb job of defining the 25 theories in a way that is at once accessible and stimulating. . . . I would rank Human Development Theories as outstanding' -Ann C. Diver-Stammes, Department of Education, Humboldt State University, California

Developmental Psychology

Learning and Memory provides students with a clear, balanced, and integrated presentation of major theoretical perspectives foundational to the study of human learning and memory. Author Darrell Rudmann uses an engaging personal writing style appropriate for students with little or no previous background in psychology to discuss topics including the major behaviorism theories of learning, modern cognitive theories of memory, social learning theories, the roles of emotion and motivation in learning, and the well-established neurological underpinnings of these perspectives. A concluding chapter on learning and memory concepts in the real world shows students to how these concepts are applied in various industries, from advertising to education and the media.

Introduction to Early Childhood Education + Coursemate, 6-month Access

Intended as supplemental reading in courses on theories of development, this book augments traditional core texts by providing students with more depth on about two dozen recent and emerging theories that have appeared over the past 20 years. This period has seen a decline of the traditional "grand" theories that attempt to apply to all people all the time in favor of "micro theories" that focus more on individual differences, so a book like this actually points the way toward the future rather than dryly reviewing the past. In addition, the author inspects the changing ways in which the concept of "theory" itself has been interpreted during this period, and he concludes with a chapter suggesting future directions.

From Childhood to Adolescence

Do all children learn language in the same way? Is the apparent 'fast' versus 'slow' learning rate among children a reflection of the individual child's approach to language acquisition? This volume explores the importance that individual differences have in language acquisition and challenges some widely held theories of linguistic development. Focusing on one- to three-year-old children, Cecilia Shore describes characteristic differences in terms of vocabulary, grammatical and phonological development. She considers whether distinctive 'styles' of language development can be defined and also examines social and cognitive influences that may explain individual differences. In conclusion, she discusses new language theories

The SAGE Encyclopedia of Educational Research, Measurement, and Evaluation

The Encyclopedia of Human Development is the first comprehensive, authoritative, and informative reference work that presents state-of-the-art research and ready-to-use facts from the fields of psychology, individual and family studies, and education in a way that is not too technical. With more than 600 entries, this three-volume Encyclopedia covers topics as diverse as adolescence, cognitive development, education, family, gender differences, identity, longitudinal research, personality development, prenatal development, temperament, and more.

Learning and Memory

With its reader-friendly style, this concise text offers a solid introduction to the fundamental concepts of cognitive psychology. Covering neuroimaging, emotion, and cognitive development, author Ronald T. Kellogg integrates the latest developments in cognitive neuroscience for a cutting-edge exploration of the field today. With new pedagogy, relevant examples, and an expanded full-color insert, *Fundamentals of Cognitive Psychology, Third Edition* is sure to engage students interested in an accessible and applied approach to cognitive psychology.

Counseling Children and Adolescents

Lifespan human development is the study of all aspects of biological, physical, cognitive,

socioemotional, and contextual development from conception to the end of life. In more than 800 signed articles by experts from a wide diversity of fields, this volume explores all individual and situational factors related to human development across the lifespan. The Encyclopedia promises to be an authoritative, discipline-defining work for students and researchers seeking to become familiar with various theories and empirical findings about human development broadly construed. Some of the broad thematic areas will include: Adolescence and Emerging Adulthood Aging Behavioral and Developmental Disorders Cognitive Development Community and Culture Early and Middle Childhood Education through the Lifespan Genetics and Biology Gender and Sexuality Life Events Mental Health through the Lifespan Research Methods in Lifespan Development Speech and Language Across the Lifespan Theories and Models of Development. Featuring signed articles by experts from the fields of child development, psychology, neuroscience, behavior analysis, education, sociology, and more, this five-volume encyclopedia promises to be an authoritative, discipline-defining work for students and researchers seeking to become familiar with the various approaches to and theories of human development as well as past and current research.

Developmental Research Methods

The standard approach to cognitive development most frequently consists of cross-sectional studies comparing different ages and groups while restricted to a single task. The necessity to focus on the

individual in an idiographic perspective, rather than on the task or the variable, has been repeatedly emphasized, most recently in several very important papers by Nesselroade and Molenaar. Variability has also emerged as a crucial characteristic. Moreover, understanding the developmental construction of a given cognitive achievement is imperative to understanding cognitive functioning in adulthood. The general objective of this book is to focus on the individual by studying intraindividual and interindividual variability in various cognitive tasks, that is, intraindividual variability across items of a given task (“inconsistency”), across various cognitive tasks (“dispersion”), and/or across years (“intraindividual change”), and of course, on interindividual differences in intraindividual variability. This book presents empirical studies that have been conducted by research groups in Europe and in North America, prominent in the field of variability and development or methodology. The 26 authors/co-authors include senior authors such as Lautrey, Schmiedek, Dauvier, van der Maas, Ghisletta, Stawski, MacDonald, and de Ribaupierre.

An Introduction to Child Development

The Sixth Edition of David F. Bjorklund and Kayla B. Causey’s topically organized *Children’s Thinking* presents a current, comprehensive, and dynamic examination of cognitive development. The book covers individual children and their developmental journeys while also following the general paths of overall cognitive development in children. This unique

and effective approach gives readers a holistic view of children's cognitive development, acknowledging that while no two children are exactly alike, they tend to follow similar developmental patterns. Supported by the latest research studies and data, the Sixth Edition provides valuable insights for readers to better understand and work with children.

Cognitive Development Today

In what areas are children and adolescents similar or dissimilar? And is the onset of early adolescence a transitional period for those characteristics that are different in childhood and adolescence? These key questions are addressed in this volume, the first comprehensive review of the literature on change and stability in the period between childhood and adolescence. The contributors explore the commonly held beliefs and theories regarding whether the profound biological changes that occur in puberty impact on or alter children's self-concepts, psychological functioning and interpersonal relationships.

Fundamentals of Cognitive Psychology

Child and Adolescent Development: A Behavioral Systems Approach integrates the views of dynamical systems concepts with a behavioral view of development. This combination of perspectives is unique and from it something new emerges – a "behavioral systems approach" to development. It is an approach that incorporates both personal and

environmental influences and the constant reciprocal interactions between nature and nurture. The book emphasizes learning as the major process for change in development and the integration of environmental influences with genetic and historical factors. Authors Gary Novak and Martha Pelaez provide a coherent understanding of the learning process in childhood and adolescence and present successful interventions to minimize typical problematic behavior during this period.

Metacognition

The uniqueness of Child and Adolescent Life Stories lies in the multiple perspectives drawn from youth, their parents, and their teachers. These perspectives provide a range of lenses through which a student or beginning teacher may view child and adolescent development. The complex processes of development occur within a social context, and therefore a professional teacher, administrator, or school psychologist will need to be able to view developmental stages from youths' perspectives as well as from their various social settings.

Cognitive Interviewing Practice

Over the last four decades, breakthroughs in genetic knowledge, together with the emergence of disciplines devoted to the scientific study of developmental disorders have resulted in much greater awareness of the many different behavioural and genetic phenotypes involved. It is now evident

that not only do different disorders have different causes and different manifestations, but different neurological and biochemical bases, different responses to intervention, and different life courses. Reflecting the enormous changes that have taken place in our knowledge and understanding of developmental disorders, this groundbreaking international volume brings this vast and complex field together for the first time. The Editors have collected together the world's leading academic scholars and clinicians, to explore how current research across a range of different disciplines can inform clinical practice and help to improve the lives of individuals and their families.

An Introduction to Theories of Human Development

In the Third Edition of the topically organized *Child Development: An Active Learning Approach*, authors Laura E. Levine and Joyce A. Munsch invite students to take an active journey toward understanding the latest findings from the field of child development. Using robust pedagogical tools built into the chapter narratives, students are challenged to confront myths and misconceptions, participate in real-world activities with children and independently, and utilize video resources and research tools to pursue knowledge and develop critical thinking skills on their own. This new edition covers the latest findings on developmental neuroscience, positive youth development, the role of fathers, and more, with topics of diversity and culture integrated throughout.

More than a textbook, this one-of-a-kind resource will continue to serve students as they go on to graduate studies, to work with children and adolescents professionally, and to care for children of their own.

Child Development From Infancy to Adolescence

"Comprising more than 500 entries, the Encyclopedia of Research Design explains how to make decisions about research design, undertake research projects in an ethical manner, interpret and draw valid inferences from data, and evaluate experiment design strategies and results. Two additional features carry this encyclopedia far above other works in the field: bibliographic entries devoted to significant articles in the history of research design and reviews of contemporary tools, such as software and statistical procedures, used to analyze results. It covers the spectrum of research design strategies, from material presented in introductory classes to topics necessary in graduate research; it addresses cross- and multidisciplinary research needs, with many examples drawn from the social and behavioral sciences, neurosciences, and biomedical and life sciences; it provides summaries of advantages and disadvantages of often-used strategies; and it uses hundreds of sample tables, figures, and equations based on real-life cases."--Publisher's description.
