Simply Selling More Cars Won't Be Enough: Revolutionizing the Retail Automotive Industry Dale Pollak believes that the car business—and the dealers who make their living in it—are in more trouble than anyone cares to admit. After four decades and three best-selling books, Pollak has witnessed the trials and triumphs of the retail automotive industry from a vantage point that few get. While car dealers are making good money, he warns that the industry is at a critical turning point, with too few paying attention to how inefficiency and lack of transparency are sapping the industry's true potential. Amid the ever-faster confluence of technology, the Internet, and changing consumer preferences, the future prosperity of the industry is far from secure. Like I See It offers practical solutions, such as making the sales process more customer-focused and digitally driven to encourage sales, managing new and used inventory to mitigate margin compression, and ending factory bonus checks. It spurs much-needed conversations and sets guideposts that help dealers, OEMs, and solution providers improve how they do business. It also shows dealers how to stay relevant, evolve to keep up with the changing times, and deal with issues

like high personnel turnover and the coming disruption of ride-sharing, self-driving cars, and Millennials who don't want (or can't afford) to own a car. Pollak believes that success will come to dealers who recognize that each customer engagement is a chance to make a positive impact and create a bond. He offers a collectively minded approach that will help build a better, more profitable, and prosperous retail automotive industry for tomorrow.

The Long-Hidden Truth About The New-Car BusinessIn the mid-1990s, in response to the sudden easy access to dealer invoice prices when the Internet arrived, the auto industry launched a secret program to "redesign" the automaker-dealer financial relationship from the ground up, a process that has continued ever since. This game-changing fact was deeply buried until 2012, when James Bragg, the country's leading automotive consumer advocate/activist, "cracked the code" and unearthed the truth. He describes that discovery process and shows how the total reconstruction of the invoice-retail price relationship

has (a) turned the long-held consumer perception of “dealer cost” into absolute fiction, (b) radically transformed the nature of dealer cash incentives and (c) outdated the core assumption behind all the “target price” negotiating advice on the Internet. He then tells you how to apply that knowledge when you're car shopping. Letting The Cat Out Of The Bag lets all the hot air out of the “boomfog” of information and advice you're finding elsewhere. It will change forever the way you approach the process of buying or leasing a new car.

Ever since their introduction in 1972, the S-Class saloons from Mercedes-Benz have been considered the pinnacle of automotive excellence. For most of that time, ownership of an S-Class - at least, of a reasonably recent one - has been symbolic of material success and of restrained yet impeccable good taste. Several other car makers have nibbled at the edges of the S-Class market, but none has produced a viable and lasting alternative to the big Benz. Mercedes-Benz S-Class 1972-2013 charts the evolution and success of the series, from the W116 model, the first to be designed from the ground up as a large luxury saloon, through to the C126 coupe, one of the all-time Mercedes-Benz classic designs. Topics covered include: development and production of the W126 saloons and classic W126 coupes; the W140 saloons in the 1990s; the 140 coupes, the W220 models and the elegant 215 coupes; the W221 models, introduced at the Frankfurt International Motor Show in 2005; the C216 coupes and the future of Mercedes-Benz S-Class. Superbly illustrated with 288 colour photographs.

Traces the tradition of consumer protest and examines the early history of Consumers Union, which started as a working-class-oriented movement and soon evolved into the guiding light of an educated consumer elite. Silber argues that in choosing scientific testing as a means of consumer reform, the Consumers Union changed itself and the consumer movement more than it did American society. He uses three case studies -- reform of automotive design, discouragement of smoking, and prevention of the contamination of food by radioactive fallout -- to demonstrate the use of scientific testing in social reform.

The Consumer's Guide to Better Buying

In the past few years, interest in plug-in electric vehicles (PEVs) has grown. Advances in battery and other technologies, new federal standards for carbon-dioxide emissions and fuel economy, state zero-emission-vehicle requirements, and the current administration's goal of putting millions of alternative-fuel vehicles on the road have all highlighted PEVs as a transportation alternative. Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles, such as lower operating costs, smoother operation, and better acceleration; the ability to fuel up at home; and zero tailpipe emissions when the vehicle operates solely on its battery. There are, however, barriers to PEV deployment, including the vehicle cost, the short all-electric driving range, the long battery charging time, uncertainties about battery life, the few choices of vehicle models, and the need for a charging infrastructure to support PEVs. What should industry do to improve the performance of PEVs and make them more attractive to consumers? At the request of Congress, *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers. This report examines the characteristics and capabilities of electric vehicle technologies, such as cost, performance, range, safety, and durability, and assesses how these factors might create barriers to widespread deployment. *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* provides an overview of the current status of

PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers. Through consideration of consumer behaviors, tax incentives, business models, incentive programs, and infrastructure needs, this book studies the state of the industry and makes recommendations to further its development and acceptance.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers

to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
