Leaders want to see changes in behavior as a result of what people have learned and may expect these new behaviors to deliver results for the business. With the third edition of this book, readers have an opportunity to update their understanding of this classic evaluation framework and to learn from the case studies about how to effectively apply the framework to a variety of learning programs. Readers are presented with the tools and the know-how to tell their own story of value creation.---Foreword by Merrill C. Anderson, Ph.D, Chief Executive Officer, MetrixGlobal, LLC

Cockpit Resource Management (CRM) has gained increased attention from the airline industry in recent years due to the growing number of accidents and near misses in airline traffic. This book, authored by the first generation of CRM experts, is the first comprehensive work on CRM. Cockpit Resource Management is a far-reaching discussion of crew coordination, communication, and resources from both within and without the cockpit. A valuable resource for commercialand military airline training curriculum, the book is also a valuable reference for business professionals who are interested in effective communication among interactive personnel. Key Features * Discusses international and cultural aspects of CRM * Examines the design and implementation of Line-Oriented Flight Training (LOFT) * Explains CRM, LOFT, and cockpit automation * Provides a case history of CRM training which improved flight safety for a major airline

Two student books cover 18 units from the BTEC National course, and an accompanying Tutor's Resource File with CD-ROM provides essential support for tutors with the preparation and delivery of lessons. Activities clearly match the assessment requirements of the course, so your students build up plenty of confidence as they go along.Your students need a good depth of theory at this level, but we've related it clearly to actual business practice. They'll be motivated by seeing how they could apply the theories they are learning to real business.Motivating case studies and examples are taken from a wide range of large and small organisations, to give students plenty of exposure to the types of businesses they might end up working in.The supporting Tutor Resource File gives you plenty of extra help in running the course.

A complete toolkit for implementation of Earned Value Management Performance-Based Earned Value uniquely shows project managers how to effectively integrate technical, schedule, and cost objectives by improving earned value management (EVM) practices. Providing innovative guidelines, methods, examples, and templates consistent with capability models and standards, this book approaches EVM from a practical level with understandable techniques that are applicable to the management of any project. Clear and unambiguous instructions explain how to incorporate EVM with key systems engineering, software engineering, and project management processes such as establishing the technical or quality baseline, requirements management, using product metrics, and meeting success criteria for technical reviews. Detailed information is included on linking product requirements, project work products, the project plan, and the Performance Measurement Baseline (PMB), as well as correlating technical performance measures (TPM) with EVM. With straightforward instructions on how to use EVM on a simple project, such as building a house, and on complex projects, such as high-risk IT and engineering development projects, it is the only book that includes excerpts from the PMI®'s Project Management Body of Knowledge (PMBOK®), CMMI, the EVM System standard, systems engineering standards,

federal acquisition regulations, and Department of Defense guides. Performance-Based Earned Value allows both novices and experienced project managers, including project manager of suppliers and customers in the commercial and government sectors; software and systems engineering process improvement leaders; CMMI appraisers; PMI members; and IEEE Computer Society members to: Incorporate product requirements and planned quality into the PMB Conduct an Integrated Baseline Review Analyze performance reports Perform independent assessments and predictive analysis Ensure that key TPMs are selected, monitored, and reported Identify the right success criteria for technical reviews Develop techniques for monitoring and controlling supplier performance Integrate risk management with EVM Comply with government acquisition policies and regulations Written by Paul Solomon and Ralph Young, internationally recognized industry experts, Performance-Based Earned Value is constructed from guidance in standards and capability models for EVM, systems engineering, software engineering, and project management. It is the complete guide to EVM, invaluable in helping students prepare for the PMI®-PMP® exam with practical examples and templates to facilitate understanding, and in guiding project professionals in the private and public sectors to use EVM on complex projects. (PMI, PMBOK, PMP, and Project Management Professional are registered marks of the Project Management Institute, Inc.)

This valuable resource provides instructional designers with the guidance they need to meet the challenge of creating effective and efficient instruction. Maintaining a careful balance between theory and application, the Fourth Edition presents a practical, easy-to-follow approach to instructional design that can be applied to K-12 classrooms, higher education, distance education, and business programs. The authors incorporate behavioral and cognitive approaches into their model, so that readers can reap the benefits of both.

Canadian Mining Journal

Reaching for the Stars has fully captured, within the framework of one of America's greatest scientific achievements, the sucesses and failures of the space program. This fascinating book is the definitive account of the development and management of the astronaut training program, via a review of the significant written material and also through interviews

with those who were major contributors to the program--including the astronauts themselves.

This paper traces the evolution of World Bank support to agricultural services, particularly agricultural extension and research in Sub-Saharan Africa. It describes the Bank's experience with the implementation of national programs in agricultural extension and research and how these are evolving to face the problems of the future. The paper concludes that participation of the beneficiaries in the design and implementation of programs is critical and will ensure the programs' convergence towards rural development.

REDUCE THE TERROR OF PILOT ERROR The most effective aviation safety tools ever, Controlling Pilot Error guides give you expert protection against the causes of up to 80% of aviation accidents—pilot mistakes. Each title provides: • Real-life pilot stories • Valuable "save-yourself" techniques and safety tips • Clear and concise analysis of error sets Controlling Pilot ErrorCULTURE, ENVIRONMENT, AND CRM Pilot decision making is impacted by many influences. A knowledge of recent discoveries on aviators' decisions and crew cockpit interactions during crisis is important to all pilots. Tony Kern's Culture, Environment, and CRM confronts the human factors behind most aviation mishaps. Applying scientific explanations to allow you to: • Recognize the psychological booby traps that imperil lives • Put firewalls between you and the human factors that doom flights • Improve priceless pilot judgement skills with proven techniques • Adopt a simple four-step backup plan for flight-critical decisions • Apply the lifesaving CRM loop process and specific tested CRM tools and techniques for safer flying • Learn why followership is as essential to good decision making as leadership • Discover why, though human failing is inevitable, it need not be fatal BEST FOR PILOTS • Build your knowledge base • Increase your confidence • Sharpen your skills • Learn lifesaving tips Tony Kern is Editor of the Controlling Pilot Error Series and a former lieutenant colonel who created the United States Air Force's human-factors training program. He also wrote three best-selling books on aviation for McGraw-Hill.
