Life-span Development

This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of

developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

Discovering the Lifespan

Development Through the Lifespan , Books a la Carte Edition

Psychology's contribution to education has produced a persuasive and burgeoning literature willing to measure (e.g. intelligence quotients), categorise (e.g. learning and/or behavioural difficulties) and pathologise (e.g. psychiatric disorders) students across learning contexts. Practices like these pervade relationships existing between psychology and education because they share in common certain views of people and the worlds in which they learn. There is however increased acknowledgement that contemporary practice demands alternate ways of working. As learning communities and educators endeavour to make a difference in peoples' lives, they

are critically questioning how their use of psychology in education constitutes future possibilities for personhood and psychosocial action. In this book, a group of respected international scholars examine controversies presently facing the enduring relationship between psychology and education. The book will appeal to readers who are interested in the innovative development and application of psychological theories and practices in/to education. The book will be of interest to transnational audiences and is accessible to scholars and students in disciplines including psychology, education, sociology, social work, youth studies, public and allied health. The volume includes contributions from: Tom Billington, Christopher Boyle, Lise Bird Claiborne, Tim Corcoran, Greg Goodman, Jack Martin, Athanasios Marvakis and Ioanna Petritsi, Jace Pillay, Isaac Prilleltensky, Anna Stetsenko, Jeff Sugarman and Stephen Vassallo with a Foreword by Ben Bradley. Tim Corcoran is Senior Research Fellow and Senior Lecturer in Critical Psychology at The Victoria Institute, Victoria University, Melbourne, Australia. He has extensive experience in educational psychology both as a school psychologist and researcher/academic. His work has involved teaching, research and professional practice in Australia, the UK, Singapore and Iraq.

Personality Development Across the Lifespan

Parents and teachers today face a swirl of conflicting theories about child rearing and educational practice. Indeed, current guides are contradictory, oversimplified, and at odds with current scientific knowledge. Now, in *Awakening Children's Minds*, Laura Berk cuts through the confusion of competing theories, offering a new way of thinking about the roles of parents and teachers and how they can make a difference in children's lives. This is the first book to bring to a general audience, in lucid prose richly laced with examples, truly state-of-the-art thinking about child rearing and early education. Berk's central message is that parents and teachers contribute profoundly to the development of competent, caring, well-adjusted children. In particular, she argues that adult-child communication in shared activities is the wellspring of psychological development. These dialogues enhance language skills, reasoning ability, problem-solving strategies, the capacity to bring action under the control of thought, and the child's cultural and moral values. Berk explains how children weave the voices of more expert cultural members into dialogues with themselves. When puzzling, difficult, or stressful circumstances arise, children call on this private speech to guide and control their thinking and behavior. In addition to providing clear roles for parents and teachers, Berk also offers concrete suggestions for creating and evaluating quality educational environments--at home, in child

care, in preschool, and in primary school--and addresses the unique challenges of helping children with special needs. Parents, Berk writes, need a consistent way of thinking about their role in children's lives, one that can guide them in making effective child-rearing decisions. *Awakening Children's Minds* gives us the basic guidance we need to raise caring, thoughtful, intelligent children.

Newman and Newman use a life-stage approach to present development across the life span, drawing on the psychosocial theory of Erik Erikson to provide a conceptual framework for the text. The authors address physical, intellectual, social, and emotional growth in 11 life stages, from the prenatal period through elderhood, focusing on the idea that development results from the interdependence of these areas at every stage, and placing special emphasis on how optimal development may be fostered throughout life.
