## **Scientific Evidence for Musculoskeletal, Bariatric, and Sports Nutrition**

Thinking as a Nurse is a point-of-view work gleaned from 37 years of direct patient care and 25 years of teaching nursing. The book emphasizes the non-technical components of nursing practice--the cognitive and cerebral aspects. The primary role of nurses is to identify and solve patient problems and Thinking as a Nurse looks at influences of clinical problem solving such as empathy, what the patient says to the nurse, pathophysiology, nurse-physician relationships, teamwork, and setting priorities. Memorization and an overemphasis on technical skills are discussed as possible pitfalls in the education of nurses. The book helps students study for nursing examinations and be more adroit in their clinical practices. There are chapters addressing studying techniques and how to deal with NCLEX-type questions.

Abnormal behaviour patterns, from the jumping and somersaulting of caged laboratory mice to the pacing of enclosed 'big cats', are displayed by many millions of farm, zoo, research and companion animals. Including new chapters and over 30 contributors, this book focuses on the causation and treatment of these environment-induced stereotypic behaviours, and their implications for animal welfare and normalcy of brain functioning. The book begins by taking an ethological perspective, focusing on the constraints captivity places on animals' normal behavioural repertoires, and the effects these have on specific motivational systems. It then addresses the role of dysfunction, particularly the impact of chronic stress and impoverished environments on brain functioning. The book then moves on to explore how stereotypic behaviours can be tackled, once they have emerged, using diverse techniques from environmental enrichment to pharmaceutical intervention. It concludes by giving a new definition for 'stereotypic behaviour', and a discussion of future research directions.
