AQA Economics Student Guide 1: The operation of markets and market failure

Through a series of examples from physics, engineering, biology and economics, this book illustrates the enormous potential for application of ideas and concepts from nonlinear dynamics and chaos theory. The overlap with examples published in other books is virtually equal to zero. The book takes the reader from detailed studies of bifurcation structures of relatively simple models to pattern formation in spatially extended systems. The book also discusses the different perspectives that nonlinear dynamics brings to different fields of science. Contents: Deterministic Approach to Die Tossing Bifurcation Analysis of Simple Nonlinear Systems Coupled Period-Doubling Systems Chaos in Technical Control Systems Ecological and Microbiological Population Dynamics Physiological Control Systems Chaos and

Research in Economic History

This journal attempts to fill a gap between the general-interest press and other academic economics journals. Its articles relate to active lines of economics research, economic analysis of public policy issues, state-of-the-art economic thinking, and directions for future research. It also aims to provide material for classroom use, and to address issues relating to the economics profession.

21st Century Economics: A Reference Handbook

Peet Strydom celebrated his 75th birthday on 20 January 2012. Within the spirit of the Ruitersbosch Conferences over the past 14 years, the editors suggested a book to commemorate this event and to celebrate the stimulating and fruitful discussions we had in the past. The invitation to all participants was that they should write a chapter on their particular field of interest. The end result is this book with a wide range of very interesting national and international economic perspectives, all in honour of Peet Strydom.

Problems of Economic and Political Transformation in the Balkans

Landmark Papers in Economic Fluctuations, Economic Policy, and Related Subjects

Forty papers from 1907 to 1990 address topics like stabilization policies, unemployment and wage rates, business cycles, debt, economic expansion, dynamic theory, home investment, capital accumulation and the allocation of resources, forecasts and economic policy, uncertainty, stochastic models, economic equilibrium, trade cycles, rationing and the cost of living, interest rates and prices, productivity, income distribution, interest theory, and Neumann models. External Evaluation of IMF Economic Research Activities

Economic Policies, Governance and the New Economics

Econometric Analysis of Financial and Economic Time Series

The aim of the Ebook series of Research Topics in Agricultural & Applied Economics (RTAAE) is to publish high quality economic researches applied to both the agricultural and non-agricultural sectors of the economy. The subject areas of this E-book series include, among others, supply and demand analysis, technical change and productivity, industrial organization, labor economics, growth and development, environmental economics, marketing, business economics and finance. By covering a broad variety of economic research topics, this Ebook series should prove to be of considerable interest to a.

Economic Perspectives

Essays on a Mature Economy: Britain After 1840

Provides an assessment of the problems of transformation in the Balkan countries, covering topics on both politics and economics. The book gives an overview of the

Tax Policy and The Economy

Brookings Papers on Economic Activity: Spring 2008

This report evaluates the IMF's economic research activities and whether they contribute successfully to the objectives of the organisation. It considers five basic issues central to the research process which relate to: organisational structure, culture, incentives and accountability, resource allocation and dissemination. The report concludes that there is room for improvement, and makes a number of recommendations which include setting priorities for research activities, and

improving incentives and accountability in the research process.

Economic Policy in EMU

Based on a National Bureau of Economic Research conference, *Tax Policy and the Economy* is a timely review of issues in the current tax debate. Focusing on the economic effects of tax policies, written in a nontechnical style accessible to policymakers, corporate managers, lawyers and economists, each article demonstrates how economic research can make an important contribution to tax policy debates.

Topics in Nonlinear Dynamics

This manuscript consists of 16 research papers that were completed between the years 1982 and 2005, the analyses of which range from the purely theoretical, to the empirical, and extending to the more ideological and philosophical. In any case, the emphasis of each paper is upon creativity, with inventiveness and innovation being the essential elements. Part two of this manuscript consists of a purely theoretical paper. This paper presents a fresh approach to macroeconomic theory and policy. Part Three, consisting of empirically oriented projects, employs unique variable and model specifications in order to verify existing theories in

Download Free Economic Paper Topics

economics. The first three papers, in this part, verifies the theories of bilateral monopoly and the employment effects of minimum wage legislation under conditions of competition, monopsony, and monopoly. The next paper examines Caribbean economic integration and verifies the principle of comparative advantage. The fifth paper, in this part, examines the relationship between market structure and rates of return. The sixth paper, in this part, deals with the gaming industry. The fourth part of this manuscript deals with the more ideological and philosophical aspects of economics and social science. The first two papers, in this part, tend to emphasize laissez faire capitalism. The third, and last, paper of this part, begins to break with this tendency, and, thus, serves as somewhat of an introduction to the fifth part of this manuscript. The fifth part of this manuscript is much more interdisciplinary in nature compared to the earlier parts and deals with class conflict and extends to conflict in general. The first paper presents the primary class conflict model and five additional papers follow. The fifth paper, while an empirical undertaking, is included here because it is consistent with the general topic of this part of the manuscript.

history of Britain at Harvard in 1970, and each is accompanied by a summary of the discussion that followed it. The participants of the conference represented a broad range of scholars from both sides of the Atlantic. The first eleven papers deal with a variety of topics covering a period from 1840 to the 1920s. They focus on the performance of the British economy, and especially its businessmen, during the time of Britain's industrial maturity and relative decline. The papers and discussions reached a novel conclusion that, contrary to commonly held opinion, the British economy performed well and that British businessmen were not lacking in entrepreneurial vigour compared with their German or American counterparts. But even more important for British historiography than this finding was the demonstration that economic and statistical methods can be applied successfully to the study of economic history. The papers in the concluding section discuss the origins and development of the new economic history and show that, as a substantial supplement to work along more traditional lines, its methods and application are both desirable and possible. This collection serves as an interesting report of research into a key period in British history, and also as a useful introductory account of the new economic history in the United Kingdom. This book was first published in 1971.

(including sociological studies), Pareto's law of income distribution and miscellaneous matters, and give a general overview of the man and his contributions.

A.I.D. Research and Development Abstracts

Testing, Rationality, and Progress

Since the publication of Theory of Games and Economic Behavior by von Neumann and Morgenstern, the concept of games has played an increasing role in economics. It also plays a role of growing importance in other sciences, including biology, political science, and psychology. Many scientists have made seminal advances and continue to be leaders in the field, including Harsanyi, Shapley, Shubik, and Selten. Professor Robert Aumann, in addition to his important contributions to game theory and economics, made a number of significant contributions to mathematics. This volume provides a collection of essays in mathematical economics and game theory, including cutting-edge research on noncooperative game theory and its foundations, bargaining theory, and general equilibrium theory. Also included is a reprint of Aumann's classic paper, "Acceptable Points in General Cooperative n -Person Games" and of the oft-

Development Economics

Interest in economics is at an all-time high. Among the challenges facing the nation is an economy with rapidly rising unemployment, failures of major businesses and industries, and continued dependence on oil with its wildly fluctuating price. Americans are debating the proper role of the government in company bailouts, the effectiveness of tax cuts versus increased government spending to stimulate the economy, and potential effects of deflation. Economists have dealt with such questions for generations, but they have taken on new meaning and significance. Tackling these questions and encompassing analysis of traditional economic theory

and topics as well as those that economists have only more recently addressed, 21st Century Economics: A Reference Handbook is intended to meet the needs of several types of readers. Undergraduate students preparing for exams will find summaries of theory and models in key areas of micro and macroeconomics. Readers interested in learning about economic analysis of an issue as well students embarking on research projects will find introductions to relevant theory and empirical evidence. And economists seeking to learn about extensions of analysis into new areas or about new approaches will benefit from chapters that introduce cutting-edge topics. To make the book accessible to undergraduate students, models have been presented only in graphical format (minimal calculus) and empirical evidence has been summarized in ways that do not require much background in statistics or econometrics. It is thereby hoped that chapters will provide both crucial information and inspiration in a non-threatening, highly readable format.

Papers and Proceedings of the Annual Meeting of the American Economic Association

Catalogue of Works on Political Economy . . . Classified by Subjects

The original essays and commentary in this volume—the third in a series reporting the results of the NBER Economics of Aging Program—address issues that are of particular importance to the well-being of individuals as they age and to a society at large that is composed increasingly of older persons. The contributors examine social security reform, including an analysis of the Japanese system; present the startling finding that the vast majority of people choose the wrong accumulation strategies for their pension plans; explore the continuing consequences of the decline in support of parents by children in the postwar period; investigate the relation between nursing home stays and the source of payment for the care; and offer initial findings on the implications of differences between developed and developing countries for understanding aging issues and determining appropriate

directions for research.

Léon Walras: Specialized topics

Applied Economic Papers

Talks about the time varying betas of the capital asset pricing model, analysis of predictive densities of nonlinear models of stock returns, modelling multivariate dynamic correlations, flexible seasonal time series models, estimation of long-memory time series models, application of the technique of boosting in volatility forecasting, and more.

research of current issues in macroeconomics and economic policy, emphasizing real-world events and institutions. The journal will uphold its tradition of excellence in areas such as fiscal and monetary policy, labor markets, wages and prices, the distribution of income and wealth, international capital flows, and international trade and development.

Topics in the Economics of Aging

Part of a series which aims to reflect the changing face of the economic climate and business world. The books contain the latest information and thinking in their areas and are specifically focused to the needs of AS, A level and first year undergraduate students.

Fifty Years of Economic Measurement

This volume contains papers presented at a conference in May 1988 in Washington, D.C., commemorating the fiftieth anniversary of the founding of the Conference on Research in Income and Wealth (CRIW). The call for papers emphasized assessments of broad topics in economic measurement, both conceptual and pragmatic. The organizers desired (and succeeded in obtaining) a mix of papers that, first, illustrate the range of measurement issues that

Download Free Economic Paper Topics

economics as a science must confront and, second, mark major milestones of CRIW accomplishment. The papers concern prices and output (Griliches, Pieper, Triplett) and also the major productive inputs, capital (Hulten) and labor (Hamermesh). Measures of saving, the source of capital accumulation, are covered in one paper (Boskin); measuring productivity, the source of much of the growth in per capita income, is reviewed in another (Jorgenson). The use of economic data in economic policy analysis and in regulation are illustrated in a review of measures of tax burden (Atrostic and Nunns) and in an analysis of the data needed for environmental regulation (Russell and Smith); the adequacy of data for policy analysis is evaluated in a roundtable discussion (chapter 12) involving four distinguished policy analysts with extensive government experience in Washington and Ottawa.
