The choices a woman makes now—from the quality of her

relationships to the quality of her diet—have the power to secure vibrant health and well-being for the rest of her life. Now completely revised, this groundbreaking classic draws on the current research and medical advances in women's health, and includes: • a new section on sex after 50—and how, if need be, you can rejuvenate your sex life; • updated mammogram guidelines—and how thermography improves breast health; • the latest on the glycemic index, optimal blood sugar levels, and ways to prevent diabetes; • dietary guidelines revealing that hidden sugar—not dietary fat—is the main culprit in heart disease, cancer, and obesity; • all you need to know about perimenopause and why it's critical to your well-being; • a vital program for ensuring pelvic health during and after menopause; • strategies to combat osteoporosis and strengthen bones for life. With this trusted resource, Dr. Christiane Northrup shows that women can make menopause a time of personal empowerment—emerging wiser, healthier, and stronger in both mind and body than ever before.

THE NEW YORK TIMES BESTSELLER! Though we talk about wanting to "age gracefully," the truth is that when it comes to getting older, we're programmed to dread an inevitable decline: in our health, our looks, our sexual relationships, even the pleasure we take in living life. But as Christiane Northrup, M.D., shows us in this profoundly empowering book, we have it in us to make growing older an entirely different experience, both for our bodies and for our souls. In chapters that blend personal stories and practical exercises with the latest research on health and aging, Dr. Northrup lays out the principles of ageless living, from rejecting processed foods to releasing stuck emotions, from embracing our sensuality to connecting deeply with our Divine Source. Explaining that the state of our health is dictated far more by our beliefs than by our biology, she works to shift our perceptions about getting older and show us what we are entitled to expect from our later years--no matter what our culture tries to teach us to the contrary--including: · Vibrant good health · A fulfilling sex life · The capacity to love without losing ourselves · The ability to move our bodies with ease and pleasure · Clarity and authenticity in all our

relationships--especially the one we have with ourselves "Taking all the right supplements and pills, or getting the right procedure done, isn't the prescription for anti-aging," Dr. Northrup explains. "Agelessness is all about vitality, the creative force that gives birth to new life." Goddesses Never Age is filled with tools and inspiration for bringing vitality and vibrancy into your own ageless years--and it all comes together in Dr. Northrup's 14-day Ageless Goddess Program, your personal prescription for creating a healthful, soulful, joyful new way of being at any stage of life.

Herbal Formularies for Health Professionals is a five-volume set that serves as a comprehensive, practical reference manual for herbalists, physicians, nurses, and allied health professionals. Dr. Jill Stansbury draws on her decades of clinical experience and her extensive research to provide an unparalleled range of herbal formulas. Organized by body system, each volume includes hundreds of formulas to treat common health conditions, as well as formulas that address specific energetic or symptomatic presentations. For each formula, Dr. Stansbury briefly explains how the selected herbs address the specific condition. Sidebars and user-friendly lists help readers quickly choose which herbs are best for specific presentations and detail traditional uses of both Western and traditional Asian formulas and herbs that are readily available in the United States. Volume 3 focuses on endocrine systems, offering formulas and supporting information for treating thyroid disease, adrenal disorders, diabetes, and metabolic syndrome. This volume also covers the female and male reproductive systems including conditions related to menstruation and PMS, fertility and pregnancy, and the prostate. Reproductive endocrinology is one of Dr. Stansbury's specialties, and she provides herbal formulas and therapies for pelvic inflammatory disease, genital herpes, ovarian cysts, endometriosis, PCOS, uterine fibroids, low libido, erectile dysfunction, and more. She also discusses the role of herbal medicine in prevention and treatment of reproductive cancers. Each chapter includes a materia medica section that describes individual herbs with tips on their properties, modes of action, and the specific symptoms each plant best addresses. These formularies are also a tutorial for budding herbalists on the sophisticated art of fine-tuning an herbal formula for the constitution and overall health condition of an individual patient, rather than prescribing a one-size-fits-all treatment for a basic diagnosis. The text aims to teach by example, helping clinicians develop their own intuition and ability to create effective herbal formulas. Volume 1 focuses on digestion and elimination and Volume 2 covers circulation and respiration. Volumes 4 (Neurology, Psychiatry, and Pain Management) and 5 (Immunology, Orthopedics, and Otolaryngology) will be published in 2020.

From a doctor living with MS: how to radically improve your quality of life with diet, hormones, supplements, exercise, and other lifestyle adjustments Most of us take for granted the little things in life—like walking out to the mailbox, socializing with friends, or enjoying a mug of hot coffee. But what if each daily activity required intensive planning and effort? That's what living with multiple sclerosis is like, and author Michaël Friedman knows this from first-hand experience. Since his diagnosis of multiple sclerosis a decade ago, Dr. Friedman has been searching for a cure for the disease. After years of research, he realized that he had some of the answers right in his naturopathic medicine toolbox, and others, surprisingly, lay in the realm of conventional medicine. *There's No Pill for This* tells his story and offers treatment advice and hope to those who suffer from MS. He does not promise a miracle cure but instead provides the personal prescriptions he follows that are delaying the disease process and radically improving his quality of life, including dietary measures and supplements to support a healthy microbiome and hormone therapies that can reduce neuroinflammation and possibly promote neurorestoration. Dr. Friedman presents a daily protocol for MS patients, including diet, supplement, detoxification, and hormone strategies; mindfulness therapy; physical therapy; and a wide range of beneficial lifestyle adjustments related to exercise, sleep routines, time management, stress management, and more. He also offers special advice for supporting healthy bladder and bowel function and improving oxygen supply. In the book's conclusion, Dr. Friedman reflects on what this complicated chronic disease has taught him, and continues to teach him, about the value of humility and about what is truly important in life.

### **Advances in Environmental Technologies III**

In the last decade an increased concern has been voiced against various environmental hazards, particularly chemicals that may cause harm to humans or animals. Numerous studies which have dealt with this subject invariably have focused on chemical contaminants of some component of a food chain. In contrast, much less attention has been paid to the potentially harmful substances that may occur in foodstuffs naturally. The purpose of this Handbook is to sensitize the reader to this problem and to provide a systematic overview of the most important naturally occurring food toxicants. The Handbook should be of interest to anybody who is concerned with nutritive and health aspects of food. Inasmuch as many of the discussed toxicants can be removed or destroyed by a suitable method of food rprocessing it should be of special value to food technologists.

Aflatoxins are a naturally occurring carcinogenic byproduct of common fungi on grains and other crops, particularly maize and groundnuts. They pose a significant public health risk in many tropical developing countries and are also a barrier to the growth of domestic and international commercial markets for food and feed. In recent years the aflatoxin problem has garnered greatly increased attention from both policy and donor communities around the globe. What can be done to reduce the detrimental impacts of aflatoxins? Because growth of the molds that produce aflatoxins is caused by multiple factors, and because they must be controlled along the entire value chain from production to consumption, only a robust multifaceted approach to controlling aflatoxins is likely to be effective. The nineteen briefs in this set thus provide different perspectives on aflatoxin risks and solutions. The analyses fall under four broad themes: (1) what is known about the health risks from aflatoxins; (2) how to overcome market constraints to improved aflatoxin control by building new market channels and incentives; (3) what is the international policy context for taking action in developing countries; and (4) what is the state of research on new aflatoxin control technologies, including new methods for aflatoxin detection, crop breeding,

biological control, food storage and handling, and postharvest mitigation. These briefs collectively provide a much clearer picture of the state of current efforts at combatting aflatoxins. They also identify what gaps loom particularly large—including the need for contry-specific risk analysis and for testing integrated solutions for the entire supply chain—in our global efforts to effectively reduce human exposure to aflatoxins and increase the economic returns to smallholders in agriculture.

The book “Salicylic acid: A Plant Hormone” was first published in 1997 and was praised for its excellent balance of traditional and modern topics. This time, we're building on the success of the prior edition to provide an even more effective second edition. The present book is comprised of 16 chapters highlighting the updated mechanisms of its biosynthesis, physiological role, its action in response to water deficit, relationship of SA with signal transduction, transport of SA and related compounds. Further, the interplay between environmental signals and SA, its impact on transport and distribution of sugars, salicylic acid mediated stress-induced flowering and some aspects of interplay of SA with JA during the establishment of plant resistance to pathogens with different types of nutrition and participation of peroxidases have also been discussed at length. Potential use of SA in food production and its efficiency on post-harvest of perishable crops as well as practical use of SA are also covered.

From the winner of the National Book Award and the National Books Critics' Circle Award—and one of the most original thinkers of our time—“Andrew Solomon’s magisterial *Far and Away* collects a quarter-century of soul-shaking essays” (*Vanity Fair*). *Far and Away* chronicles Andrew Solomon’s writings about places undergoing seismic shifts—political, cultural, and spiritual. From his stint on the barricades in Moscow in 1991, when he joined artists in resisting the coup whose failure ended the Soviet Union, his 2002 account of the rebirth of culture in Afghanistan following the fall of the Taliban, his insightful appraisal of a Myanmar seeped in contradictions as it slowly, fitfully pushes toward freedom, and many other stories of profound upheaval, this book provides a unique window onto the very idea of social change. With his signature brilliance and compassion, Solomon demonstrates both how history is altered by individuals, and how personal identities are altered when governments alter. A journalist and essayist of remarkable perception and prescience, Solomon captures the essence of these cultures. Ranging across seven continents and twenty-five years, these “meaty dispatches...are
