A stand-alone working document, *Stormwater Effects Handbook: A Toolbox for Watershed Managers, Scientists, and Engineers* assists scientists and regulators in determining when stormwater runoff causes adverse effects in receiving waters. This complicated task requires an integrated assessment approach that focuses on sampling before, during, and after storms. The Handbook supplies assessment strategies, sample testing and collection methods, and includes illustrative figures and tables. The authors introduce an innovative design that can be tailored to address a wide range of environmental concerns, such as: ecological and human health risk assessments, water quality or biological criteria exceedences, use impairment, source identification, trend analysis, determination of best management practices, stormwater quality monitoring for NPDES Phase I and II permits and applications, and total maximum daily load assessments. They provide case studies to illustrate the effectiveness of this approach and the data that can be compiled. Containing reviews of emerging technologies that hold promise for more effective receiving water evaluations, this book gives you detailed information on selecting methods and carrying out comprehensive evaluations. It includes guidance for the experimental design measurements, as well as standard and advanced statistical methods for data evaluations. Despite the complexity of stormwater management, successful and accurate assessments of their impact are possible by following the integrated approaches described in *Stormwater Effects Handbook: A Toolbox for Watershed Managers, Scientists, and Engineers*.

Leadership Roles and Management Functions in Nursing

Working People in Alberta traces the history of labour in Alberta from the period of First Nations occupation to the present. Drawing on over two hundred interviews with labour leaders, activists, and ordinary working people, as well as on archival records, the volume gives voice to the people who have toiled in Alberta over the centuries. In so doing, it seeks to counter the view of Alberta as a one-class, one-party, one-ideology province, in which distinctions between

those who work and those who own are irrelevant. Workers from across the generations tell another tale, of an ongoing collective struggle to improve their economic and social circumstances in the face of a dominant, exploitative elite. Their stories are set within a sequential analysis of provincial politics and economics, supplemented by chapters on women and the labour movement and on minority workers of colour and their quest for social justice. Published on the occasion of the 100th anniversary of the Alberta Federation of Labour, *Working People in Alberta* contrasts the stories of workers who were union members and those who were not. In its depictions of union organizing drives, strikes, and working-class life in cities and towns, this lavishly illustrated volume creates a composite portrait of the men and women who have worked to build and sustain the province of Alberta.

A Gift of Fire

Official U.S. edition with full color illustrations throughout. NEW YORK TIMES BESTSELLER Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon Sapiens, returns with an equally original, compelling, and provocative book, turning his focus toward humanity's future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been

transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from bingeing at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda? As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? Homo Deus explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is Homo Deus. With the same insight and clarity that made Sapiens an international hit and a New York Times bestseller, Harari maps out our future.

technological advances of future and the requisite pedagogical shifts to achieve efficiency and effectiveness. The demand of educational technology has been rising steadily, primarily due to the fact that e-learning is a huge and significantly expanding worldwide industry. Commercial e-learning companies, training departments in large companies and organizations, computer software companies and educational institutions the world over employ large numbers of educational technology specialists. There is a strong demand for technologists who understand educational theories and for instructional designers and teachers who understand technologies. This book is targeted towards those who are looking for career in educational technology, instructional design, or media and information systems, or may want to continue their studies in graduate programs in learning and instructional technology, and those who are interested in becoming teacher in K-12 setting but need background in educational technology. This book will also act as a valuable resource in teacher education programs where primary focus on mainstream education and requires an authentic resource in instructional design and educational technology. Keeping in mind the varied needs of the organizations, employees and potential students, this book adopts a competency approach to learning and assessment. The themes and topics take a multidisciplinary approach, and are aimed at preparing students for competent and innovative educational technology professionals.

"Storming Heaven" is a riveting history of LSD and its influence on American culture. Jay Stevens uses the "curious molecule" known as LSD as a kind of tracer bullet, illuminating one of postwar America's most improbable shadow-histories. His prodigiously researched narrative moves from Aldous Huxley's earnest attempts to "open the doors of perception" to Timothy Leary's surreal experiments at Millbrook; from the CIA's purchase of millions of doses to the thousands of flower children who turned on and burned out in Haight-Ashbury. Along the way, this brilliant novelistic work of cultural history unties such figures as Allen Ginsberg, Cary Grant, G. Gordon Liddy, and Charles Manson. Still Standing reveals how an unlikely governor is sparking a whole new kind of politics—and introduces the exciting possibilities that lie ahead. As the rookie Republican governor of deep-blue Maryland, Larry Hogan had already beaten some daunting odds. A common-sense businessman with a down-to-earth style, he had won a long-shot election the Washington Post called “a stunning upset.” He’d worked with cops and neighborhood leaders to quell Baltimore’s worst rioting in 47 years. He’d stared down entrenched political bosses to save his state from fiscal catastrophe, winning praise from Democrats, Republicans and independents. But none of that prepared him for the life-threatening challenge he would have to face next: a highly aggressive form of late-stage cancer. Could America’s most popular governor beat the odds again? The people of Maryland, with their “Hogan Strong” wristbands, were certainly pulling for him, sending him back to the governor’s office in a landslide. As Governor Hogan began his second term cancer-free, his next challenge went far beyond Maryland: bringing our divided

country together for a better future. And in 2020, as the COVID-19 pandemic changed that future forever, Hogan was once again called to rely upon his bold, open-minded approach to problem-solving to lead and serve in a time of unprecedented turmoil. In his own words and unique, plain-spoken style, Larry Hogan tells the feel-good story of a fresh American leader being touted as the “anti-Trump Republican.” A lifelong uniter at a time of sharp divisions. A politician with practical solutions that take the best from all sides. An open-hearted man who has learned important lessons from his own struggles in life. As we face a future full of questions, Hogan offers some surprising answers. Still Standing is a timely reminder that perseverance in the face of unexpected obstacles is at the heart of the American spirit.

In nine lively essays, bioethicist J. David Velleman challenges the prevailing consensus about assisted suicide and reproductive technology, articulating an original approach to the ethics of creating and ending human lives. He argues that assistance in dying is appropriate only at the point where talk of suicide is not, and he raises moral objections to anonymous donor conception. In their place, Velleman champions a morality of valuing personhood over happiness in

making end-of-life decisions, and respecting the personhood of future children in making decisions about procreation. These controversial views are defended with philosophical rigor while remaining accessible to the general reader. Written over Velleman's 30 years of undergraduate teaching in bioethics, the essays have never before been collected and made available to a non-academic audience. They will open new lines of debate on issues of intense public interest.

The Construction of Mental Representations During Reading

Gerald Graff argues that our schools and colleges make the intellectual life seem more opaque, narrowly specialized, and beyond normal learning capacities than it is or needs to be. Left clueless in the academic world, many students view the life of the mind as a secret society for which only an elite few qualify. In a refreshing departure from standard diatribes against academia, Graff shows how academic unintelligibility is unwittingly reinforced not only by academic jargon and obscure writing, but by the disconnection of the curriculum and the failure to exploit the many connections between academia and popular culture. Finally, Graff offers a wealth of practical suggestions for making the culture of ideas and arguments more accessible to students, showing how students can enter the public debates that permeate their lives.
