Endoscopy in patients on antiplatelet or anticoagulant

Learn about the impressive career and achievements
of Kenneth Wang, ISDE President from 2014-2016, in
the July issue of Diseases of the Esophagus. Factors

influencing development of non-cardiac chest pain after endoscopic submucosal dissection for esophageal neoplasms: a retrospective case-control study of 309 patients from a single center

Endoscopic Recognition and Management Strategies for

Diseases of the Colon & Rectum is the world's leading publication in colorectal surgery, ranking in the top 14% of all peer-reviewed surgery journals. DC&R is the recognized authority on conditions affecting the colon, rectum, and anus, publishing original articles, case reports, reviews, short communications, book reviews and society news. For more than fifty years, DC&R has been the journal

The American Journal of Surgery is a peer-reviewed journal designed for the general surgeon who performs abdominal, cancer, vascular, head and neck, breast, colorectal, and other forms of surgery. AJS is the official journal of seven major surgical societies and publishes their official papers as well as independently submitted clinical studies, editorials, reviews, brief reports

Current Issue : Diseases of the Colon & Rectum

Endoscopic injection of botulinum toxin is a well-

studied treatment option and results in good symptomatic benefit in patients with diffuse esophageal spasm. Surgical treatment was reported in patients with very severe symptoms refractory to pharmacologic treatment. (The Cochrane Library 2009, issue 3) and MEDLINE, EMBASE, and CINAHL to

The major clinical significance of a Type I hernia is its association with reflux disease. In patients with proven gastroesophageal reflux disease, with or without a sliding hiatal hernia, antireflux surgery is an option for the management of their condition 33, 34. The indication for repair of a sliding (Type I) hiatal hernia is gastroesophageal reflux disease.

Endoscopic Submucosal Dissection An Issue

The risk of endoscopy in patients on antithrombotics depends on the risks of procedural haemorrhage versus thrombosis due to discontinuation of therapy. P2Y12 receptor antagonists (clopidogrel, prasugrel, ticagrelor) For low-risk endoscopic procedures we recommend continuing P2Y12 receptor antagonists as single or dual antiplatelet therapy (low quality evidence, strong recommendation); For

If en bloc endoscopic resection is beyond the skillset of the endoscopist, these patients should be referred to a dedicated center with appropriate endoscopic expertise. Endoscopic submucosal dissection has been shown to be associated with the highest rates of en bloc resection and is available in some centers in the United States.
