Praise forEnvisioning the Survey Interview of the Future "This book is an excellent introduction to some brave new technologies . . . and their possible impacts on the way surveys might be conducted. Anyone interested in the future of survey methodology should read this book." Norman M. Bradburn, PhD, National Opinion Research Center, University of Chicago "Envisioning the Survey Interview of the Future gathers some of the brightest minds in alternative methods of gathering self-report data, with an eye toward the future self-report sample survey. Conrad and Schober, by assembling a group of talented survey researchers and creative inventors of new software-based tools to gather information from human subjects, have created a volume of importance to all interested in imagining future ways of interviewing." Robert M. Groves, PhD, Survey Research Center, University of Michigan This collaboration provides extensive insight into the impact of communication technology on survey research As previously unimaginable

communication technologies rapidly become commonplace, survey researchers are presented with both opportunities and obstacles when collecting and interpreting data based on human response. Envisioning the Survey Interview of the Future explores the increasing influence of emerging technologies on the data collection process and, in particular, self-report data collection in interviews, providing the key principles for using these new modes of communication. With contributions written by leading researchers in the fields of survey methodology and communication technology, this compilation integrates the use of modern technological developments with established social science theory. The book familiarizes readers with these new modes of communication by discussing the challenges to accuracy, legitimacy, and confidentiality that researchers must anticipate while collecting data, and it also provides tools for adopting new technologies in order to obtain high-quality results with minimal error or bias. Envisioning the Survey Interview of the Future addresses questions that researchers in survey methodology and communication technology must consider, such as: How and when should new communication technology be adopted in the interview process? What are the principles that extend beyond particular technologies? Why do respondents answer questions from a computer differently than questions from a human interviewer? How can systems adapt to respondents' thinking and feeling? What new ethical concerns about privacy and confidentiality are raised from using new communication technologies? With its multidisciplinary approach, extensive discussion of existing and future technologies, and practical

guidelines for adopting new technology, Envisioning the Survey Interview of the Future is an essential resource for survey methodologists, questionnaire designers, and communication technologists in any field that conducts survey research. It also serves as an excellent supplement for courses in research methods at the upper-undergraduate or graduate level.

Teaching Autoethnography: Personal Writing in the Classroom is dedicated to the

practice of immersive ethnographic and autoethonographic writing that encourages authors to participate in the communities about which they write. This book draws not only on critical qualitative inquiry methods such as interview and observation, but also on theories and sensibilities from creative writing and performance studies, which encourage self-reflection and narrative composition. Concepts from qualitative inquiry studies, which examine everyday life, are combined with approaches to the creation of character and scene to help writers develop engaging narratives that examine chosen subcultures and the author's position in relation to her research subjects. The book brings together a brief history of first-person qualitative research and writing from the past forty years, examining the evolution of nonfiction and qualitative approaches in relation to the personal essay. A selection of recent student writing in the genre as well as reflective student essays on the experience of conducting research in the classroom is presented in the context of exercises for coursework and beyond. Also explored in detail are guidelines for interviewing and identifying subjects and techniques for creating informed sketches and images that engage the reader. This book provides approaches anyone can use to explore their communities and write about them first-hand. The methods presented can be used for a single assignment in a larger course or to guide an entire semester through many levels and varieties of informed personal writing.

"Part chronicle, part analysis and part advice manual, Social Scientists Meets the Media combines the thoughts of academics and media people to produce a vivid and valuable series of accounts that will prove of service to all academics seeking a wider audience but wary of the terra incognita they face in finding one" Ellis Cashmore, Staffordshire University Social Scientists know they are in a dilemma: their work may fall prey to sensationalism, but at the same time they don't want to be overlooked. Social Scientists Meet the Media collects the experiences of academics who have sought to publicize their research. It contains personal accounts from social scientists with extensive media contact and representatives from radio, television and the press. Based on these often humorous and sometimes chastening accounts, the editors suggest ways to achieve a more fruitful relationship between social scientists and the media.
