### Exploring Space, Exploring Earth

Activities, blackline masters and assessment pages providing action packed lesson plans for manipulating 2D space conceptions in fun, practical ways. Any additional resources required are easy-to-find classroom or household objects and the flexible activities range from the simple to challenging to help cater for different ability groups.

### Exploring the Limits of Preclassical Mechanics

Useful for the first three years of Secondary school, this is a three book series. It provides an introduction to the world of Science and is a helpful foundation for CXC separate sciences and CXC single award Integrated Science. Written in clear English, it is suitable for a range of abilities.

### Exploring Probability in School

I feel this book would be valuable to all childcarers. It is well worth the time you can spare for a first read, and would make a good "dip-in" reference book for the future. The study described is set in a school, but consideration of pre-school groups is also made. Childminders could easily adopt the ideas presented for play within their own homes and encourage them within those of the children also. The value of parental involvement is strongly emphasised' - "Who Minds " The book is highly recommended particularly for early years teachers and teachers in training where the findings and general

comments will give a good underpinning to classroom practice' - "Early Years " In this book, the authors present an interpretative account of a piece of collaborative action-research into children's blockplay during a three-year project. Children from three to seven years, early years teachers, nursery nurses, and two members of staff from the Froebel Institute College, Roehampton Institute, all acting as participant observers, shared in the discovery of the blockplay.

Exploring Sacred Landscapes offers mental health practitioners both a motivation and a rationale for taking into account the importance of spiritual struggle and religious experience in the lives of their patients. The six clinicians contributing to this volume provide an intimate look at the therapeutic process in which manifestations of the spiritual and the religious are used to understand and further that process. Drawing primarily on psychoanalytic theories but also including a Jungian perspective and a structural stage development view, these clinicians trace the developmental course of therapy, discuss their theoretical orientation, present their therapeutic interventions, and describe the nature of transference and countertransference reactions. Each detailed clinical case study includes a section that orients readers to the significance and impact of religion in the course of treatment. With its careful examination of the clinical process - how religious and spiritual strivings are manifested, the nuances of therapeutic intervention - this book builds an important bridge between clinical theory and practice.

### **Exploring the Scriptures**

The great diversity of contexts in which the term Postmodernism is currently encountered reflects the remarkable success of a coinage that has been in circulation for only about forty years. It has been used by philosophers, sociologists, art critics and literary historians to become, finally, a household word in the language of advertising and politics. Before letting it fade to a derelict cliché, an attempt is made in this volume of essays to use its potential as a cultural concept for the analysis and understanding of contemporary literature and thought.

### **Exploring Digital Design**

This volume does not offer a complex perspective of the L2 lexicon, but rather represents a sustained attempt to answer some very basic questions clustered around the relationship between the L2 mental lexicon and the L1 mental lexicon. It provides a review of L1 and L2 lexical research issues such as similarities and differences between the conditions of L1 and L2 acquisition, the respective roles of form and meaning in L1 and L2 processing, and the degree of separation/integration between L1 and L2 lexical operations.

### **Exploring Black Sexuality**

When one thinks of the explorers of space, one often considers the astronauts who piloted their craft to the moon in the 1960s and other astronauts and cosmonauts who followed to staff the space shuttles and space stations. However, the exploration of space did not begin in the 20th century, nor was it always conducted from spaceships. Exploring Space offers extensive coverage of human exploration into space—from ancient theory and Renaissance observations to 19th-century fantasy to 20th-century achievement to the future—while recognizing the important achievements of astronomers like Galileo in obtaining accurate data and increasing public awareness and excitement for the possibilities of space exploration. Highlights include: How astronomers began to realize that Earth was only one of several planets. Native American astronomy. The U.S.-Soviet "race to the moon" in the 1960s. The challenges NASA has faced such as the explosions of the Challenger and Columbia. Life on other planets: Astronomers' hints. An assessment of the future of space exploration, which will likely include more unmanned missions.

Exploring Management, Second Edition by John Schermerhorn, presents a new and exciting approach in teaching and learning the principles of management. This text is organized within a unique learning system tailored to students' reading and study styles. It offers a clean, engaging and innovative approach that motivates students and helps them understand and master management principles.

### **Exploring Galatians**

### **Exploring Corpora for ESP Learning**

This book investigates the effects of corpus work on the process of foreign language learning in ESP settings. It suggests that observing learners at work with corpus data can stimulate discussion and re-thinking of the pedagogical implications of both the theoretical and empirical aspects of corpus linguistics. The ideas presented here are developed from the Data-Driven Learning approach introduced by Tim Johns in the early nineties. The experience of watching students perform corpus analysis provides the basis for the two main observations in the book: a) corpus work provides students with a useful source of information about ESP language features, b) the process of "search-and-discovery" implied in the method of corpus analysis may facilitate language learning and promote autonomy in learning language use. The discussion is carried out on the basis of a series of corpus-based "explorations" by students and provides suggestions for developing new tasks and tools for language learners.

### **Exploring Feelings**

Describes how the Europeans and Native Americans developed separate cultures, and discusses the consequences when the two cultures collided.

### **Exploring Ecological Hermeneutics**

For every woman who has ever been called outdoorsy comes a collection of stories that inspires unforgettable adventure. Beautiful, empowering, and exhilarating, *She Explores* is a spirited celebration of female bravery and courage, and an inspirational companion for any woman who wants to travel the world on her own terms. Combining breathtaking travel photography with compelling personal narratives, *She Explores* shares the stories of 40 diverse women on unforgettable journeys in nature: women who live out of vans, trucks, and vintage trailers, hiking the wild, cooking meals over campfires, and sleeping under the stars. Women biking through the countryside, embarking on an unknown road trip, or backpacking through the outdoors with their young children in tow. Complementing the narratives are practical tips and advice for women planning their own trips, including:

- Preparing for a solo hike
- Must-haves for a road-trip kitchen
- Planning ahead for unknown territory
- Telling your own story

A visually stunning and emotionally satisfying collection for any woman craving new landscapes and adventure.

### **Exploring Romans**

What has hermeneutics to do with ecology? What texts, if any, come to mind when you consider what the scriptures might say about environmental ethics? To help readers think critically and clearly about the Bible's relation to modern environmental issues, this volume expands the horizons of biblical interpretation to introduce ecological hermeneutics,

moving beyond a simple discussion about Earth and its constituents as topics to a reading of the text from the perspective of Earth. In these groundbreaking essays, sixteen scholars seek ways to identify with Earth as they read and retrieve the role or voice of Earth, a voice previously unnoticed or suppressed within the biblical text and its interpretation. This study enriches eco-theology with eco-exegesis, a radical and timely dialogue between ecology and hermeneutics. The contributors are Vicky Balabanski, Laurie Braaten, Norman Habel, Theodore Hiebert, Cameron Howard, Melissa Tubbs Loya, Hilary Marlow, Susan Miller, Raymond Person, Alice Sinnott, Kristin Swenson, Sigve Tonstad, Peter Trudinger, Marie Turner, Elaine Wainwright, and Arthur Walker-Jones.

### **Exploring People of the Old Testament**

An account of the impact of space exploration on our understanding of the geology and geophysics of Earth.

### **TAKS Reading in the Content Areas: Exploring Nonfiction Supplement Grade 3 Teacher's Guide**

Exploring Black Sexuality provides an overview of the myths and stereotypes that surround Black sexuality and an analysis of how Euro-Americans developed these myths as part of a strategy to enslave and exploit Afro-Americans in the new world. It explores various dimensions of Black sexuality, ranging from its roots in the popular culture fashioned out of slavery in the form of music, literature and films, same-sex behavior, sexual assault, interracial sex, dating styles, prostitution, pornography and how fame and money make a difference in sexual behavior. Based on current trends, the author predicts future sexual styles.

### **Exploring Postmodernism**

### **Exploring the Thalamus**

Offers 249 articles on ancient civilizations, covering such topics as legendary figures and deities, places, philosophy, religion, mythology, and writings, art, education, and technology.

### **Exploring Science**

### **Exploring Energy**

The aim of this volume is to discuss recent research into self-experience and its disorders, and to contribute to a better integration of the different empirical and conceptual perspectives. Among the topics discussed are questions like 'What is a self?', 'What is the relation between the self-givenness of consciousness and the givenness of the conscious self?', 'How should we understand the self-disorders encountered in schizophrenia?' and 'What general insights into the nature of the self can pathological phenomena provide us with?' Most of the contributions are characterized by a distinct phenomenological approach. The chapters by Butterworth, Strawson, Zahavi, and Marbach are general in nature and address different psychological and philosophical aspects of what it means to be a self. Next Eilan, Parnas, and Sass turn to schizophrenia and ask both how we should approach and understand this disorder, and, more specifically, what we can learn about the nature of selfhood and existence from psychopathology. The chapters by Blakemore and Gallagher present a defense and a criticism of the so-called model of self-monitoring, respectively. The final three chapters by Cutting, Stanghellini, Schwartz and Wiggins represent anthropologically oriented attempts to situate pathologies of self-experience. (Series B)

### **Exploring Sacred Landscapes**

Covers over 100 teacher-led activities that encourage young children to think mathematically by exploring, experimenting and being creative. Assessment is built into tasks, and each book includes a bank of photocopiable resource sheets linked to activities.

### **Exploring the French Language**

This is a daily inspirational study book, based on a pattern to read your Bible through in one year. Rev. Rodney Whittle, along with his congregation, used this plan for many years to read their Bible through; it was such a blessing to him personally. He decided to follow that same format, as he wrote this book. There are two passages to read a day, a morning Old Testament passage and an evening New Testament passage. He would take an inspirational thought he received from that passage and write a study. As he wrote the monthly booklets, he didn't necessarily do them in sequential order and he only lacked eight days of his last month (January), before he passed away. His wife, Grace, worked and completed the eight days that remained, with other materials he had written in times past. Rodney E. Whittle was born in Cereal, Alberta, Canada, on October 29, 1928, and died on September 8, 2007. At his home, two missionaries from the Canadian Sunday School Mission arrived on bicycles to do missionary work. Through the ministry of these men, Rodney was wonderfully converted and called to preach the gospel. He spent the years 1944-1950 at Prairie Bible Institute, where the missionary boys were attending. He met his wife, Grace at Prairie and they married on August 28, 1950 and celebrated 57 happy years together. He had four daughters, ten grandchildren, and six great grandchildren at the time of his passing. He pastored and

helped many churches; Houston Texas, Dallas Texas, St. Louis Missouri, Minneapolis Minnesota, Nassau Bahamas, and Kingston Jamaica. He was pastoring in White Bear Lake, Minnesota, at the time of his death.

### **Exploring the Self**

This inaugural volume in the John Phillips Bible Characters series provides a rich exposition of the lives of twenty-seven significant--and sometimes overlooked--people in the Old Testament. An excellent resource for pastors and teachers.

### **Exploring North America, 1800-1900**

Describes what energy is, where it can be found, and how it is used in everyday life.

Museum theatre can be one of the most effective and rewarding programs your institution ever undertakes, and it can be one of the most challenging! Some institutions shy away from theatre because it seems too foreign to their mission, while others take it on enthusiastically but with little understanding of its demands. In Exploring Museum Theatre Tessa Bridal, one of the leading experts in the field, helps bridge these gaps and leads you along the path to a successful museum theatre program. She covers the philosophical and historical background including how to find your style, developing your first program, costs and funding, working with actors, directors, and other professionals, technical issues, evaluations, promotion, presenting difficult issues, collaborations, and historic interpretation. Appendixes and a bibliography round out this excellent reference.

### **Exploring Language Structure**

Adopting a unique approach among introductions to Christian ethics, Kyle Fedler's Exploring Christian Ethics guides students through the moral decision-making process by providing foundational material in both ethical theory and biblical ethics. First, Fedler introduces the reader to the discipline of ethics, then he explores the ways Scripture can be used responsibly in Christian ethics, and finally, he presents and analyzes the sections of Scripture that have been most influential in Christian morality and ethics.

### **Exploring Management**

Exploring Probability in School provides a new perspective into research on the teaching and learning of probability. It creates this perspective by recognizing and analysing the special challenges faced by teachers and learners in contemporary classrooms where probability has recently become a mainstream part of the curriculum from early childhood through high school. The authors of the book discuss the nature of probability, look at the meaning of probabilistic literacy, and examine student access to powerful ideas in probability during the elementary, middle, and high school years. Moreover, they assemble and analyse research-based pedagogical knowledge for teachers that can enhance the learning of probability throughout these school years. With the book's rich application of probability research to classroom practice, it will not only be essential reading for researchers and graduate students involved in probability education; it will also capture the interest of educational policy makers, curriculum personnel, teacher educators, and teachers.

### **Exploring the Texture of Texts**

Winner of a 2008 Teachers' Choice Award! Anxiety can be debilitating for anyone, but it can be especially confusing for a child. Learning about emotions helps children recognize connections between thinking and feeling, and helps them identify the physiological effects of anxiety on the body (sweating, increased heart rate, crying, etc.). This book provides a guide for caregivers and then the workbook section allows children to identify situations that make them anxious and learn how to perceive the situation differently. Helpful topics include: Overview of the Exploring Feelings Program Introduction to Cognitive Behaviour Therapy Modifications to Conventional Cognitive Behaviour Therapy Affective Education Cognitive Restructuring Comic Strip Conversations The Emotional Toolbox Additional Tools for the Toolbox Social Stories Research Evidence on the Effectiveness of Exploring Feelings

### **Exploring Classroom Discourse**

The relationship between science and the public is one of the great contemporary debates. Understanding between scientists and non-scientists is a key figure in the dialogue and here the interpretation of science in museums has a vital part to play.

### **Exploring the Second Language Mental Lexicon**

Routledge Introductions to Applied Linguistics consists of introductory level textbooks covering the core topics in Applied Linguistics, designed for those entering postgraduate studies and language professionals returning to academic study. The books take an innovative "practice to theory" approach, with a 'back to front' structure which takes the reader from real life problems and issues in the field, then enters into a discussion of intervention and how to engage with these concerns. The

final section concludes by tying the practical issues to theoretical foundations. Additional features include tasks with commentaries, a glossary of key terms, and an annotated further reading section. This book looks particularly at the relationship between language, interaction and learning. Providing a comprehensive account of current perspectives on classroom discourse, the book aims to promote a fuller understanding of interaction, regarded as being central to effective teaching and introduces the concept of classroom interactional competence (CIC). The case is made in this book for a need not only to describe classroom discourse, but to ensure that teachers and learners develop the kind of interactional competence which will result in more engaged, dynamic classrooms where learners are actively involved in the learning process. This approach makes an invaluable resource for language teachers, as well as students of language and education, and language acquisition within the field of applied linguistics.

### **Exploring American History Answer Key**

The question of when and how the basic concepts that characterize modern science arose in Western Europe has long been central to the history of science. This book examines the transition from Renaissance engineering and philosophy of nature to classical mechanics oriented on the central concept of velocity. Descartes, Galileo, and other protagonists of what the authors call "preclassical mechanics" struggled with fundamental concepts and contributed crucial insights to classical mechanics, but it is not clear that they actually realized these insights themselves. This book argues that the emergence of classical mechanics was neither a cumulative change nor an abrupt revolution, but rather that the transformation was the result of exploring the limits and exhausting the possibilities of the existing, largely Aristotelian conceptual system. In the dozen years that have passed since the appearance of the first edition, significant research has been done on Descartes and Galileo and the origins of modern science. There have also been important advances in the accessibility of sources and in technology for analyzing them. For this new edition, the authors take account of the most important new results. They include a new discussion of the doctrine of proportions, an analysis of the role of traditional statics in the construction of Descartes' impact rules, and go deeper into the debate between Descartes and Hobbes on the explanation of refraction. They also provide significant new material on the early development of Galileo's work on mechanics and the law of fall. All translations have been reviewed and revised for consistency of terminology and several new documents have been added. The bibliography has been updated to take account of new literature.

### **Exploring Science in Museums**

Romans is one of the few books in the New Testament that was not composed as a pastoral response to specific, localized problems. Instead this letter was written primarily to challenge and ultimately correct widespread misunderstandings about Christianity held by mid-first-century believers. Some of these beliefs are embraced even now, and the careful study of this

letter to believers whom Paul had not yet met is vital to every sincere Christian. Paul's central focus in Romans is the means of obtaining salvation. Point by point, he systematically builds his case by articulating who needs salvation and why, the role of the law, God's response to the sin problem, resolution of the legal issues presented by sin, and the effect each has on the Christian's life. This devotional commentary divides the entire text into short passages that are followed by a detailed, user-friendly exegetical explanation and practical application to everyday life.

### **Exploring Ancient Civilizations**

In this book Vernon K. Robbins provides an accessible introduction to socio-rhetorical criticism, illustrating the method by guiding the reader through the study of specific New Testament texts and stories. An opening chapter outlines this new approach and its focus on values, convictions, and beliefs both in the text we read and in the world in which we live. Then follow studies and exercises dealing with specific textural features: inner texture, intertexture, social and cultural texture, ideological texture, and sacred texture.

### **Exploring the Americas**

Exploring Digital Design takes a multi-disciplinary look at digital design research where digital design is embedded in a larger socio-cultural context. Working from socio-technical research areas such as Participatory Design (PD), Computer Supported Cooperative Work (CSCW) and Human-Computer Interaction (HCI), the book explores how humanities offer new insights into digital design, and discusses a variety of digital design research practices, methods, and theoretical approaches spanning established disciplinary borders. The aim of the book is to explore the diversity of contemporary digital design practices in which commonly shared aspects are interpreted and integrated into different disciplinary and interdisciplinary conversations. It is the conversations and explorations with humanities that further distinguish this book within digital design research. Illustrated with real examples from digital design research practices from a variety of research projects and from a broad range of contexts Exploring Digital Design offers a basis for understanding the disciplinary roots as well as the interdisciplinary dialogues in digital design research, providing theoretical, empirical, and methodological sources for understanding digital design research. The first half of the book Exploring Digital Design is authored as a multi-disciplinary approach to digital design research, and represents novel perspectives and analyses in this research. The contributors are Gunnar Liestøl, Andrew Morrison and Christina Mörtberg in addition to the editors. Although primarily written for researchers and graduate students, digital design practitioners will also find the book useful. Overall, Exploring Digital Design provides an excellent introduction to, and resource for, research into digital design.

### **Exploring Learning**

Designed to introduce new technologies to students, instructors, manufacturing engineers, supervisors and managers, this ready reference includes many new manufacturing technologies for those who do not have time to undertake the necessary research. Each topic addresses the following points: a brief description of the technology and where it is used the underlying theory and principles and how the technology works where the technology can be used and what conventional process it may replace the requirements necessary to make it work and some possible pitfalls advantages and disadvantages successful application areas. This state-of-the-art book is sure to be an effective resource for anyone wanting to stay up to date with the very latest technologies in manufacturing.

### **Exploring Museum Theatre**

Designed for those beginning to study linguistics, this is a lively introduction to two key aspects of the structure of language: syntax (the structure of sentences) and morphology (the structure of words). It shows students in a step-by-step fashion how to analyze the syntax and morphology of any language, by clearly describing the basic methods and techniques, and providing almost 100 practical exercises based on data from a rich variety of the world's languages. Written in an engaging style and complete with a comprehensive glossary, Exploring Language Structure explains linguistic concepts by using clear analogies from everyday life. It introduces a range of essential topics in syntax and morphology, such as rules, categories, word classes, grammatical relations, multi-clause constructions and typology. Providing a solid foundation in morphology and syntax, this is the perfect introductory text for beginning students, and will fully prepare them for more advanced courses in linguistic analysis.

### **Exploring the Word**

The thalamus is a group of cells placed centrally in the brain that serve a critical role in controlling how both sensory and motor signals are passed from one part of the cerebral cortex to another. Essentially, all information reaching the cerebral cortex and thus consciousness is relayed through the thalamus. The role of the thalamus in controlling the flow of information (such as visual, auditory, and motor) to the cortex has only recently begun to be understood. This book provides an in-depth look at the function of the thalamus and its role as relay of information to the cerebral cortex. The authors explore how the thalamus controls messages that are passed to the cortex and they introduce the novel suggestion

that the thalamus serves a critical role in controlling how messages pass from one part of the cortex to another. Exploring the Thalamus is a comprehensive, up-to-date reference for researchers. It discusses problems concerning the function and structure of the thalamus and concludes each chapter with thought-provoking questions regarding future research. Focuses on thalamocortical interrelationships Discusses important problems concerning the function and structure of the thalamus Concludes each chapter with thought-provoking questions requiring future research
