Practical Evidence-Based Physiotherapy - E-Book

Looking back to the last years of the nineteenth century, veteran producer-director Joseph L. Anderson draws upon a monumental body of research gleaned from libraries and archives in seven countries to introduce the Japanese theatrical impresario Kawakami Otojiro. In 1899, Kawakami, his wife -- the inspired dancer and actress Sadayakko -- and his troupe went on epochal performance tours of the U.S. and Europe, introducing audiences to new forms of dramatic art and dance previously unseen in the West. Possessed of boundless energy and limitless imagination, Kawakami was a pioneer who quite literally viewed the world as his stage. In the closing decade of an all-too-brief life, Kawakami introduced major reforms of Japanese performance and the theatre business. Scholarly, witty, and filled with fascinating insights into the culture and conventions of "fin de siecle" America, Europe, and Japan, "Enter a Samurai" opens a door into a little-known, yet vitally important era of modern theatrical history. About the Author Joseph L. Anderson has been enjoying Japanese and American plays and films for over seven decades. During the 1950s and 1960s he wrote for and was an editorial board member on many little film

magazines. Later, as professor of film in the Ohio University College of Fine Arts and adjunct in its Comparative Arts doctoral program in the early 1960s, he pioneered university-level studies of Japanese cinema. He has a BA in history from Antioch College and an MA from Ohio State University, and he was a language student at ICU, Tokyo. Anderson is the principal coauthor of "The Japanese Film: Art and Industry" (in print for fifty years). Anderson was chief advisor for the Tokyo Broadcasting System academic program in Japanese Broadcasting, Media, and Culture and taught at the Tisch School of the Arts, New York University. He has been an assistant director and dialogue coach on American feature films shot in Japan as well as a director of documentary films, a "Variety" stringer, and a writer of subtitles for Japanese films. In Hollywood and at WGBH Boston, he developed computer-generated subtitles for feature motion pictures (the technique in use today). During his career, he directed two independent American feature films, was an outside producer for ABC and CBS news specials, director of special projects at the American] Art Theatre Guild, Mid-West producer for the Candid Camera Company, a puppeteer, a neophyte comedian in burlesque, an actor in lesser touring companies, director of a children's theatre, and an English language "benshi" (live narrator of Japanese silent films). In his teens he was a professional scenic artist, stage carpenter, and minor actor with several Equity summer stock theatres. Anderson is now a retired vice president of WGBH Boston, the organization that for several decades has produced more than a fourth of the television programs seen nationwide on PBS. In 1989, he

received the Japan Prize (Nihonsho) for WGBH and was a Japan Foundation senior fellow in 1975.

Frederick Douglass was a man of his time and race, a leader and fighter against the irrational and inhuman treatment of the blacks. This narrative is one of the most influential among African-American books denouncing the Institution of Slavery. It was written in 1845, over fifty years after the narrative of the great son of Africa Olaudah Equiano (1797). Being a slave

himself, the accounts Douglass narrates are very important as a primary source describing the endurances and tribulations he had suffered under the slavery of the Southern territories, especially in Maryland. His life was full of bitterness, grief and sorrow; but certainly he became a great man indeedalso against all odds.

Miguel de Cervantes y Saavedra was born in Alcal of Henares in 1547. He was a novelist, playwright, and poet-criticized by himself-considered as one, if not the greatest Spanish language writer of all time, even though he never studied at a university. Don Quixote is his best known work which has transcended nations, cultures, languages, epochs and times. Cervantes has been read by children and adults, men and housewives, rich and poor. He described his own portrait by writing: 'of an aquiline face, brown hairwith a silver beard that twenty years early was a golden

one.'The hidalgo Don Quixote of La Mancha wishes to cleanse the world of scoundrels, talkative and goofy: Did he achieve it? Even today he is doing it because although it is utopian to think that human strength can reach such step, he learned to transcend the times and bring us that unequivocal victory while denouncing and trying to introduce some bravery inside our reasoning.We cannot look at the characters of Sancho and Don Quixote as a mere souls' contradiction of the one same people, in this case Spain. They actually complement each other in a kind of literary marriage: one wants justice, shared base of any society and reports it through his ideals, the other is practical as he wants to see them in reality; but two: the announcer and corroborator, are both active in their impeachment.

All areas of construction litigation are covered in this two-volume set, starting with case analysis, pretrial activities, and special forum issues. The authors continue with an in-depth discussion of the difficult presentation issues for delay and acceleration claims, lost productivity claims, and establishing damages. The final section of the text covers trial and other issues, including direct and cross-examination, appeals, and settlement and releases. Practical examples of, and checklists for, the drafting of many of the key documents used in construction litigation are also included.

Structure and Interpretation of Computer Programs - 2nd Edition

This book is the preliminary part of a great work titled «THE BOOK OF THE EGYPTIAN: The beginning of the basic Egyptology or a key to the understanding of history, philosophy and world religion». Usually, the introduction is made in the form of a brief preface or foreword, but I got a whole book as the first step in a multi-volume publication of the study. The purpose of this specific introduction as the beginning of serious research – is right at the level of the opening to inspire a reader, showing him in a clear visual and comprehensible form, the whole true mechanism of the hieroglyphic writing. To achieve this, I will completely dispel the myth created by the modern science that hieroglyphs do not convey any meaning (of words, the whole idea), but only individual sounds (letters), or their combination (syllables). This scientific myth will be finally deprived of the status of scientific knowledge, and the translation of the Phaistos disc, on the contrary, will be clearly shown, what is called «broken apart», and will be read in the ancient hieroglyphic language united by the principle of construction – in the language of the ancient Egyptians. I can say that it will not be two simultaneously existing systems of hieroglyphs translation, as well as two Egyptologies, one will be false, and the other – true! To prove the validity of the system of translation I wanted to give you immediately not only a complete translation of the text of the Phaistos disc, where the number of occurrences of each hieroglyph is not big (1 to 19

times), but the translation of the whole ancient Egyptian writing, because the number of times it is used in there is thousands, if not even millions. And each such use of each hieroglyph is translating in the same way, so it creates the full reading of the hieroglyphic texts – writing, which will be easily read by everyone with the dictionary of hieroglyphs in the future. The main reason why I wanted to do it – is because, at first, I read the ancient Egyptian texts and only then, by chance, came across with the hieroglyphs of the Phaistos disc. But then, I decided to set a different aim – to teach the reader to think, and not just to read hieroglyphs. Since we have no ancient Egyptian temple, and you're not its novice, the method of achieving the aims will be different than in the antiquity. First of all, I would suggest not a translation of ancient Egyptian hieroglyphs, but a complete translation of the Phaistos disc, and at the same time to give them a sort of test of common sense to modern science in the face of particular academies and universities of the world. Let them answer me the question, not knowing the translations of ancient Egyptian texts, – whether they think this translation of the Phaistos disc is correct? So when I completely publish «The Book of Egyptian», it will become clear who they are and where do they lead all of you. As they always test the students, it's a time to test them as well. Will they pass the test, I do not know, but any way, you, my reader, will get to know about it, (in the main manuscript) and will be able to draw your own conclusions about their intellectual level. Therefore, I recommend you to take this message of the book, at least with the attention, because not every day the science gets a ready

revelation, designed in the form of scientific study. And here the attention and common sense will help the reader to re-look the original, pure, uncomplicated meaning of the Hieroglyphs, which through the veil of delusion will finally begin to appear in their true, original and vibrant colors – and finally, get from the nether world – into the realm of the living!

Nowadays, textual databases are among the most rapidly growing collections of data. Some of these collections contain a new type of data that differs from classical numerical or textual data. These are long sequences of symbols, not divided into well-separated small tokens (words). The most prominent among such collections are databases of biological sequences, which are experiencing today an unprecedented growth rate. Starting in 2008, the "1000 Genomes Project" has been launched with the

ultimate goal of collecting sequences of additional 1,500 Human genomes, 500 each of European, African, and East Asian origin. This will produce an extensive catalog of Human genetic variations. The size of just the raw sequences in this catalog would be about 5 terabytes. Querying strings without well-separated tokens poses a different set of challenges, typically addressed by building full-text indexes, which provide effective structures to index all the substrings of the given strings. Since full-text indexes occupy more space than the raw data, it is often necessary to use disk space for their construction. However, until recently, the construction of full-text indexes in secondary storage was considered impractical due to excessive I/O costs. Despite this, algorithms developed in the last decade demonstrated that efficient external construction of full-text indexes is indeed possible. This book is about large-scale construction and usage of full-text indexes. We focus mainly on suffix trees, and show efficient algorithms that can convert suffix trees to other kinds of full-text indexes and vice versa. There are four parts in this book. They are a mix of string searching theory with the reality of external memory constraints. The first part introduces general concepts of full-text indexes and shows the relationships between them. The second part presents the first series of external-memory construction algorithms that can handle the construction of full-text indexes for moderately large strings in the order of few gigabytes. The third part presents algorithms that scale for very large strings. The final part examines queries that can be facilitated by disk-resident full-text indexes. Table of Contents: Structures for
