The major religions of the world are a mystery to many high school teens. Now you can help them unlock the doors of these traditions with our new text, *World Religions: A Voyage of Discovery*. The book is an introductory survey that helps eleventh and twelfth graders understand the people, dimensions, and religious principles of the world's major religions. The textbook includes a chapter on each of eleven major world religions, including Christianity, Islam, Hinduism, Buddhism, Judaism, and others. The text offers the Catholic perspective on interreligious dialogue, an overview of basic questions that religions address, and Ninian Smart's seven dimensions of religion. A glossary and word pronunciations in each chapter help students learn unfamiliar terms. In addition, the second edition of this text incorporates the following new features: a new chapter on modern trends in religion; new, more detailed maps; a new section on the Aztec religion of Mesoamerica; a sidebar in each chapter offering examples of the seven dimensions of religion; and review questions at

## College Physics

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Putting physics first Based on his storied research and teaching, Eric Mazur's Principles & Practice of Physics builds an understanding of physics that is both thorough and accessible. Unique organization and pedagogy allow students to develop a true conceptual understanding of physics alongside the quantitative skills needed in the course. \* New learning architecture: The book is structured to help students learn physics in an organized way that encourages comprehension and reduces distraction. \* Physics on a contemporary foundation: Traditional texts delay the introduction of ideas that we now see as unifying and foundational. This text builds physics on those unifying foundations, helping students to develop an understanding that is stronger, deeper, and fundamentally simpler. \* Research-based instruction: This text uses a range of research-based instructional techniques to teach physics in the most effective manner possible. The result is a groundbreaking book that puts physics first, thereby making it more accessible to students and easier for instructors to teach. MasteringPhysics(R) works with the text to create a learning program that enables students to learn both in and out of the classroom. This program provides a better teaching and learning experience for you and your students. Here's how: \* Build an integrated, conceptual understanding of physics: Help students gain a deeper understanding of the unified laws that govern our physical world through the
