This book demonstrates pioneering work on user-based service innovation using an analytical framework. This approach involves understanding the needs of users, the service firms collaborating with them, and recognising the fact that users are innovators and, as such, services develop whilst in use. As well as presenting case studies, the book discusses theoretically what user-based innovation means in the context of services. Three main fields are analysed: user-based innovation in knowledge-intensive business service, user-based innovation in public services, and models and methods for structuring user-based innovation. Incorporating both an academic and analytical approach, this insightful book will be a source of inspiration for researchers in innovation and services. Graduate and postgraduate students in business administration and innovation, as well as administrators in public administrations and executive managers in service firms will also find plenty of important information in this invaluable resource.

The increasing availability of botanicals on the market, intended to be used as dietary supplements for health, has been fueled by the public's demand for a more natural approach to healthcare. Unfortunately, much of the information fed to the public on alternatives is based on anecdotal evidence (case stories), the advice of friends, or media features that often do not stand up to standards for scientific evidence. In this book Al-Achi explains current research and science that exists - or remains lacking - for the various botanicals as healthcare products. He also details the potential misuse and the dangers of some herbal formulas. Photographs of 62 medicinal plants are included. The history leading to the use of botanicals in healthcare is described, as are botanicals used in the treatment of cancer, cardiovascular disease, endocrine system disorders such as diabetes, gastrointestinal problems, men's and women's specific disorders, infections, chronic pain, psychological disorders such as anxiety and depression, and other health issues.
