Air Power and National Security

This document serves as the third revision of the USAF Parachute Handbook which was first published in 1951. The data and information represent the current state of the art relative to recovery system design and development. The initial chapters describe representative recovery applications, components, subsystems, material, manufacture and testing. The final chapters provide empirical data and analytical methods useful for predicting performance and presenting a definitive design of selected components into a reliable recovery system.

Hepato-gastroenterology

This title provides a global survey of the rapidly growing field of image-guided therapy. You find detailed coverage of a wide range of key topics, from MRI-guided surgery, robotic cardiac surgery, and brachytherapy and hyperthermia for cancer treatment . to modern procedures in neurosurgery, laser cosmetic therapy, and ultrasound-guided high intensity focused ultrasound therapy for non-invasive tumor treatment. You learn the fundamentals of imaging and therapeutic modalities and their capabilities and constraints in implementation of image-guided therapy systems.

The Practical Mechanic's Journal

Includes, beginning Sept. 15, 1954 (and on the 15th of each month, Sept.-May) a special section: School library journal, ISSN 0000-0035, (called Junior libraries, 1954-May 1961). Also issued separately.

Facial Plastic Surgery

Interventional radiology is an indispensable and still expanding area of modern medicine that encompasses numerous diagnostic and therapeutic procedures. The revised and extended second edition of this volume covers a broad range of non-vascular interventions guided by CT or MR imaging. Indications, materials, techniques, and results are all carefully discussed. A particularly comprehensive section is devoted to interventional oncology as the most rapidly growing branch of interventional radiology. In addition, detailed information is provided that will assist in establishing and developing an interventional service. This richly illustrated book will be a most valuable source of information and guidance for all radiologists who deal with non-vascular procedures.
