"The purpose of this book is to use the analysis of practical cases to educate healthcare leaders about managing the health of populations and communities. Historically, healthcare executives have been taught how to lead and manage within their organizations, with minimal attention to external relationships. However, in today's health landscape--with evolving payment models and growing recognition of the importance of social determinants--this kind of internal orientation is no longer sufficient. The ability to manage "beyond the walls" of the institution has become essential to the success of any healthcare leader. The cases in this book emphasize the application of healthcare management principles and skills across institutional boundaries to effectively manage the health status of a population or community"--
