### **Handbook of Social Work in Health and Aging**

Accessible and instructive, *Handbook of Social Work in Health and Aging* guides and inspires health social workers to incorporate palliative care principles into their current clinical practice. Through the lenses of environmental theory and intersectionality, rich case narratives highlight opportunities for social workers to enhance their work, advancing whole-person care in the face of serious illness. Chapters include questions to concretize ideas and demonstrate real-world application, while case narratives cover a range of settings, diagnoses, and populations. This book is a useful tool for educators, learners, and practicing social workers working with individuals and families navigating complex health care systems.

### **Transforming Palliative Care in Nursing Homes**

To reduce the impact of COVID-19 outbreak conditions on businesses, workers, customers, and the public, it is important for all employers to plan now for COVID-19. The Occupational Safety and Health Administration (OSHA) developed this COVID-19 planning guidance based on traditional infection prevention and industrial hygiene practices. It focuses on the need for employers to implement engineering, administrative, and work practice controls and personal protective equipment (PPE), as well as considerations for doing so.

### **A Facility-Based Risk Management Program**

## **Handbook of Home Health Standards**

Maintaining dignity for patients approaching death is a core principle of palliative care. Dignity therapy, a psychological intervention developed by Dr. Harvey Max Chochinov and his internationally lauded research group, has been designed specifically to address many of the psychological, existential, and spiritual challenges that patients and their families face as they grapple with the reality of life drawing to a close. In the first book to lay out the blueprint for this unique and meaningful intervention, Chochinov addresses one of the most important dimensions of being human. Being alive means being vulnerable and mortal; he argues that dignity therapy offers a way to preserve meaning and hope for patients approaching death. With history and foundations of dignity in care, and step by step guidance for readers interested in implementing the program, this volume illuminates how dignity therapy can change end-of-life experience for those about to die - and for those who will grieve their passing.

## **Wound Care at End of Life**

The first text to explore the history, characteristics, and challenges of hospice social work, this volume weaves leading research into an underlying framework for practice and care. A longtime practitioner, Dona J. Reese describes the hospice social work role in assessment and intervention with individuals, families, groups, organizations, and the community, while honestly confronting the personal and professional difficulties of such life-changing work. She introduces a well-tested model of psychosocial and spiritual variables that predict hospice client outcomes, and she advances a social work assessment tool to document their occurrence. Operating at the center of national leaders' coordinated efforts to develop and advance professional organizations and guidelines for end-of-life care, Reese reaches out with support and practice information, helping social workers understand their significance in treating the whole person, contributing to the

cultural competence of hospice settings, and claiming a definitive place within the hospice team.

## **Hospice & Palliative Care Handbook, Third Edition**

Hospice & Palliative Care Handbook, Third Edition, offers concise, focused coverage of all aspects of hospice and palliative care for clinicians, managers, and other team members who provide important care while meeting difficult multilevel regulations. ## **Social Work in the Health Field**

## **Social Work**

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

## **The Changing Face of Health Care Social Work, Fourth Edition**

Covers key social problems and practice-related issues The last two decades in social work have seen tremendous strides in field research, from the development of improved research designs to more accurate methods of problem measurement and outcome analysis. Drawing upon these significant advances, the two-volume handbook of Empirical Social Work Practice brings together empirically validated interventions for many of the psychosocial problems most frequently encountered by social workers in their daily practice. Unlike other books in the field that employ a theory-based approach to treatment, this handbook focuses on the best-supported methods of helping clients with particular problems irrespective of theoretical biases, offering clinicians a valuable compendium of practice guidelines for treatment. Edited and authored by recognized experts in the field, the Handbook of Empirical Social Work Practice is clearly written and organized for easy reference. Volume Two covers key social problems and practice-related issues including: \* Crime, homelessness, and unemployment \* Domestic violence and sexual abuse \* Family conflict and preservation \* Practice approaches for older clients \* Empirically based supervision With information that is at once accessible

and up to date, the Handbook of Empirical Social Work Practice is a vital source of guidance for today's clinical social workers and other practicing mental health professionals, as well as students. "One of the best tools to promote the values of the [social work] profession is that of empirical social work practice. 'Telling the truth' is one of these values, and discovering the truth is something that empirical research is very good at. This book presents credible reviews of contemporary empirical literature pertaining to selected behavioral, affective, and intellectual disorders, and their psychosocial assessment and treatment. That such a book is now possible is a striking affirmation of the merits of the approach to social work called empirical clinical practice." ---- from the Handbook of Empirical Social Work Practice

#### **A Guide For Nursing Home Social Workers**

When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. *Approaching Death* reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical care strategies to the patient's values and circumstances. *Approaching Death* considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be done."

#### **Handbook of Home Health Standards E-Book**

Reports of mistreated children, domestic violence, and abuse of elderly persons continue to strain the capacity of police, courts, social services agencies, and medical centers. At the same time, myriad treatment and prevention programs are providing services to victims and offenders. Although limited research knowledge exists regarding the effectiveness of these programs, such information is often scattered, inaccessible, and difficult to obtain. *Violence in Families* takes the first hard look at the successes and failures of family violence interventions. It offers recommendations to guide services, programs, policy, and research on victim support and assistance, treatments and penalties for offenders, and law enforcement. Included is an analysis of more than 100 evaluation studies on the outcomes of different kinds of programs and services. *Violence in Families* provides the most comprehensive review on the topic to date. It explores the scope and complexity of family violence, including identification of the multiple types of victims and offenders, who require different approaches to intervention. The book

outlines new strategies that offer promising approaches for service providers and researchers and for improving the evaluation of prevention and treatment services. Violence in Families discusses issues that underlie all types of family violence, such as the tension between family support and the protection of children, risk factors that contribute to violent behavior in families, and the balance between family privacy and community interventions. The core of the book is a research-based review of interventions used in three institutional sectors--social services, health, and law enforcement settings--and how to measure their effectiveness in combating maltreatment of children, domestic violence, and abuse of the elderly. Among the questions explored by the committee: Does the child protective services system work? Does the threat of arrest deter batterers? The volume discusses the strength of the evidence and highlights emerging links among interventions in different institutional settings. Thorough, readable, and well organized, Violence in Families synthesizes what is known and outlines what needs to be discovered. This volume will be of great interest to policymakers, social services providers, health care professionals, police and court officials, victim advocates, researchers, and concerned individuals.

## **Palliative Care**

Anti-Oppressive Social Work Practice is the first text to fully integrate concepts of anti-oppressive practice with generalist practice course content. This comprehensive approach introduces concepts of social justice and offers detailed insight into how those principles intersect with the practice of social work at the micro, mezzo, and macro levels. The book covers ethics, values, and social work theory, and discusses the fundamentals of working with individuals, families, groups, organizations, and communities. The book also highlights policy and social movement activism and practice within a global context. Maintaining an integrative approach throughout, authors Karen Morgaine and Moshoula Capous-Desyllas effectively bridge the gap between anti-oppressive principles and practice, and offer a practical, comprehensive solution to schools approaching reaccreditation under the mandated CSWE Standards. ? “Provides an important step in the ongoing evolution of generalist practice in social work. It continues a rich tradition [that] challenges the profession to become more and more explicit about the revolutionary aspect of practice.” —Christian Itin, Metropolitan State University of Denver “Offers a fresh perspective of social work practice interventions.” —Terrence Allen, North Carolina Central University

### **The Social Work Ethics Audit**

### **Oxford Textbook of Palliative Social Work**

This volume outlines the belief that nursing homes can and should support the physical, psychological, and social needs of residents, and that residents can thrive in nursing homes when these needs are met. The book's contributors explore the role that palliative or comfort care plays in enhancing the quality of life of nursing home residents as well as the medical, familial, psychological, cultural, and financial issues that influence decision-making about end-of-life care. The book is designed to be a tool to prepare social workers to advocate for a greater incorporation of palliative care and psychosocial care into the culture of nursing home care. The book includes discussions of the psychosocial needs of nursing home residents and families, the financing of long-term care and end-of-life care, ethical issues in chronic care and end of life, trends and characteristics in nursing home care, rituals and grief at end-of-life, and considerations for the future. Each chapter includes case examples to further illustrate points made.
