### Going for It!

From Motorbooks, the leader in automotive publishing for over 4 decades, comes the most practical car care guide ever produced to help the average car owner maintain and repair his or her vehicle - How to Repair Your Car. In this easy-to-follow guide, author Paul Brand, a nationally known automotive expert, takes you through the steps of auto maintenance and repair—simple steps that could add years to a car's life and save a driver thousands of dollars in repairs. This is also the only car maintenance and repair guide on the market to contain 50 do-it-yourself projects in full-color, step-by-step instructions that are easy to follow and understand. Focusing on post-1985 cars (with occasional explanations about earlier models), Brand introduces readers to the rudiments of automotive systems—from electrical, fuel, and cooling to drivetrain, suspension, tires, brakes, and exhaust—and discusses problems that arise in each system. The book includes practical advice for readers with only a passing knowledge of cars, as well as the basics of caring for a car's exterior and interior. How to Repair Your Car is a must-have for any car owner who wants to extend the life of his or her car, learn how to perform car maintenance or repair instead of paying a mechanic, diagnose simple noises and knocks, as well as learn tips for knowing exactly what they're paying for when their car goes to the shop.

### Apes of the World

On 20 July 1969, US astronauts Neil Armstrong and Buzz Aldrin became the first men to walk on the moon. NASA Mission AS-506 Apollo 11 Owners' Workshop Manual is the story of the Apollo 11 mission and the 'space hardware' that made it all possible. This manual looks at the evolution and design of the mighty Saturn V rocket, the Command and Service Modules, and the Lunar Module. It describes the space suits worn by the crew and their special life support and communications systems. We learn about how the Apollo 11 mission was flown - from launch procedures to 'flying' the Saturn V and the 'LEM', and from moon walking to the earth re-entry procedure. This new edition of the book celebrates the 50th Anniversary of the Apollo 11 moon landing.

The ethics and aesthetics of ruins are a crucial element in the history of civilisations: it symbolises the presence of the past, but at the same time embodies the potential for future developments. In fact, a ruin is never neutral: caught between nature and culture, suspended between catastrophe and reconstruction, it is immersed in the flow of time while suggesting eternity. In order to give an idea of the historical complexity of the concept, the book which was created and edited by Dimitri Ozerkov will range thematically over centuries, focusing on salient points: from the first mythologies of destruction, the effect of divine wrath (Deucalion and Pyrrha, Tower of Babel, Sodom and Gomorra, etc.) to the "iconoclastic terrorism" of Palmyra, while also including ancient Egypt, Greco-Roman antiquity, the "instauratio Romae", the "ruine du Louvre", and twentieth-century destructions by war and the ruins of the Twin Towers. How perceptual technologies have shaped the history of war from the Renaissance to the present From ubiquitous surveillance to drone strikes that put "warheads onto foreheads," we live in a world of globalized, individualized targeting. The perils are great. In *The Eye of War*, Antoine Bousquet provides both a sweeping historical overview of military perception technologies and a disquieting lens on a world that is, increasingly, one in which anything or anyone that can be perceived can be destroyed—in which to see is to destroy. Arguing that modern-day global targeting is dissolving the conventionally bounded spaces of armed conflict, Bousquet shows that over several centuries, a logistical order of militarized perception has come into ascendancy, bringing perception and annihilation into

ever-closer alignment. The efforts deployed to evade this deadly visibility have correspondingly intensified, yielding practices of radical concealment that presage a wholesale disappearance of the customary space of the battlefield. Beginning with the Renaissance's fateful discovery of linear perspective, *The Eye of War* discloses the entanglement of the sciences and techniques of perception, representation, and localization in the modern era amid the perpetual quest for military superiority. In a survey that ranges from the telescope, aerial photograph, and gridded map to radar, digital imaging, and the geographic information system, Bousquet shows how successive technological systems have profoundly shaped the history of warfare and the experience of soldiering. A work of grand historical sweep and remarkable analytical power, *The Eye of War* explores the implications of militarized perception for the character of war in the twenty-first century and the place of human subjects within its increasingly technical armature.

Corrosion due to water is one of the most significant and complex causes of damage to metallic products. Written from the viewpoint of physical chemistry, this authoritative and established text deals with the aqueous corrosion of metals. Available for the first time in English, *Corrosion of Metal* addressing engineers, metallurgists, physicists and chemists. This self-contained, valuable reference comprehensively organizes and makes readily accessible the accumulated wealth of fundamental and applied knowledge. The concentration is on the underlying essentials of corrosion and failure, and the material is consistently presented in relation to practical applications to corrosion protection. The first chapters introducing the physicochemical principles are ideal for students. The following chapters provide an overview of the state of research for those familiar with the fundamentals. An exhaustive bibliography and appendices conclude the volume.

This book presents an energetic approach to the performance analysis of internal combustion engines, seen as attractive applications of the principles of thermodynamics, fluid mechanics and energy transfer. Paying particular attention to the presentation of theory and practice in a balanced ratio, the book is an important aid both for students and for technicians, who want to widen their knowledge of basic principles required for design and development of internal combustion engines. New engine technologies are covered, together with recent developments in terms of: intake and exhaust flow optimization, design and

development of supercharging systems, fuel metering and spray characteristic control, fluid turbulence motions, traditional and advanced combustion process analysis, formation and control of pollutant emissions and noise, heat transfer and cooling, fossil and renewable fuels, mono- and multi-dimensional models of thermo-fluid-dynamic processes.

For more than 120 years (1714–1837) Great Britain was linked to the German Electorate, later Kingdom, of Hanover through Personal Union. This made Britain a continental European state in many respects, and diluted her sense of insular apartness. The geopolitical focus of Britain was now as much on Germany, on the Elbe and the Weser as it was on the Channel or overseas. At the same time, the Hanoverian connection was a major and highly controversial factor in British high politics and popular political debate. This volume was the first systematically to explore the subject by a team of experts drawn from the UK, US and Germany. They integrate the burgeoning specialist literature on aspects of the Personal Union into the broader history of eighteenth- and early nineteenth-century Britain. Never before had the impact of the Hanoverian connection on British politics, monarchy and the public sphere, been so thoroughly investigated.
