In *Marx at the Margins*, Kevin Anderson uncovers a variety of extensive but neglected texts by Marx that cast what we thought we knew about his work in a startlingly different light. Analyzing a variety of Marx's writings, including journalistic work written for the *New York Tribune*, Anderson presents us with a Marx quite at odds with conventional interpretations. Rather than providing us with an account of Marx as an exclusively class-based thinker, Anderson here offers a portrait of Marx for the twenty-first century: a global theorist whose social critique was sensitive to the varieties of human social and historical development, including not just class, but nationalism, race, and ethnicity, as well. Through highly informed readings of work ranging from Marx's unpublished 1879-82 notebooks to his passionate writings about the antislavery cause in the United States, this volume delivers a groundbreaking and canon-changing vision of Karl Marx that is sure to provoke lively debate in Marxist scholarship and beyond. For this expanded edition, Anderson has written a new preface that discusses the additional 1879-82 notebook material, as well as the influence of the Russian-American philosopher Raya Dunayevskaya on his thinking.

Today's Developmental Math students enter college needing more than just the math, and this has directly impacted the instructor's role in the classroom. Instructors have to teach to different learning styles, within multiple teaching environments, and to a student population that is mostly unfamiliar with how to be a successful college student. Authors Andrea Hendricks and Pauline Chow have noticed this growing trend in their combined 30+ years of teaching at their respective community colleges, both in their face-to-face and online courses. As a result, they set out to create course materials that help today's students not only learn the mathematical concepts but also build life skills for future success. Understanding the time constraints for instructors, these authors have worked to integrate success strategies into both the print and digital materials, so that there is no sacrifice of time spent on the math. Furthermore, Andrea and Pauline have taken the time to write purposeful examples and exercises that are student-centered, relevant to today's students, and guide students to practice critical thinking skills. Intermediate Algebra and its supplemental materials, coupled with ALEKS or Connect Math Hosted by ALEKS, allow for both full-time and part-time instructors to teach more than just the math in any teaching environment without an overwhelming amount of preparation time or even classroom time.
