Qualitative Research Design: An Interactive Approach, Second Edition provides researchers and students with a user-friendly, step-by-step guide to planning qualitative research. A bestseller in its First Edition, this invaluable book presents an innovative approach to the components of design and how they interact with each other. The text presents a clear strategy for creating coherent and workable relationships among these design components and highlights key design issues. Based on a course the author taught for seven years at the Harvard Graduate School of Education, the work is written in an informal, jargon-free style and incorporates many examples and hands-on exercises.

Understanding and Evaluating Research: A Critical Guide aims to sensitize students to the necessity of learning how not to defer to the mysterious authority of the experts, but rather to learn how to be a critical consumer of others' research, and to gain confidence in their ability to be producers of research. Sue McGregor shows students how to be research literate, and how to find, critique and apply other people's scholarship. This textbook is grounded in a solid understanding of the prevailing research methodologies for creating new knowledge (philosophical underpinnings), which in turn dictate problem posing, theory selection, and research methods (tasks for sampling, collecting and analyzing data, and reporting results).

Conducting phenomenological research for dissertations can be an involved and challenging process, and writing it up is often the most challenging part. *How to Write a Phenomenological Dissertation* gives students practical, applied advice on how to structure and develop each chapter of the dissertation specifically for phenomenological research. Phenomenology is about personal experience and personal experience varies from researcher to researcher. However, this variation is a big source of confusion for new researchers in the social, behavioral, or health sciences. This brief text is written in a simple, step-by-step fashion to account for this flexibility and variation while also providing structure necessary for a successful dissertation. Broken up into chapters that follow each chapter of the dissertation, this text logically addresses the various parts of phenomenological research, starting with ensuring phenomenology is the right method for your research, writing the literature review, going through methods and results sections to analysis and discussion. The author, using experience gleaned

from supervising phenomenological dissertations for many years, gives time-tested advice on how structure the dissertation to fit into more common frameworks, using checklists and tables throughout. Each chapter includes a list of helpful resources for students to use alongside this book with specific information on methods and research. Unique to this text is a chapter on creating your own phenomenological method which allows students to expand their viewpoints and experiment in future studies after the dissertation.

Research Methods

This book provides introductory materials on research methods and report writing that aim at guiding students and researchers towards effective research and reporting of their findings. Unlike the many volumes on research that are mostly theoretical, this book originated in the classroom and grew out of the students' own needs to design and conduct satisfactory research in order to meet academic requirements. It is also designed to help experienced researchers in their research ventures. In fulfilling this purpose, the author uses simple, straightforward language. He also provides appropriate examples and illustrations to enable the reader to grasp the basic concepts of research. The book will prove a useful guide for students and researchers in social sciences and humanities who wish to transform research theory into real and feasible research projects.

meet the demands of our competitive, technology-driven society. This book explores the problem within the context of social, historical, cultural, and biological factors. Recommendations address the identification of groups of children at risk, effective instruction for the preschool and early grades, effective approaches to dialects and bilingualism, the importance of these findings for the professional development of teachers, and gaps that remain in our understanding of how children learn to read. Implications for parents, teachers, schools, communities, the media, and government at all levels are discussed. The book examines the epidemiology of reading problems and introduces the concepts used by experts in the field. In a clear and readable narrative, word identification, comprehension, and other processes in normal reading development are discussed. Against the background of normal progress, Preventing Reading Difficulties in Young Children examines factors that put children at risk of poor reading. It explores in detail how literacy can be fostered from birth through kindergarten and the primary grades, including evaluation of philosophies, systems, and materials commonly used to teach reading.

corporations in the energy sector need not only have a long-term vision of the developments necessary up to the year 2050. They also have to understand the impacts these developments will have on the firm's competitiveness in short- and medium-term. Does this cause a dilemma? At least this challenge is not addressed in classical strategic management literature. The book at hand shows that sustainable development is about to become a central element of strategic management and corporate decision-making. However, classical trend-based strategy approaches do not address the systemic challenges that arise from the need for sustainable development, especially major emission reductions in the energy sector appropriately. A sustainability-oriented business strategy has to be based on a different understanding of the corporate targets, the strategic decision-making process and the role of the firm within its natural and societal environment. The author shows how corporations can engage in such a target-oriented strategy discussion by using strategic backcasting as a tool to describe their long-term targets and derive necessary measures. These corporate "milestones" need to be prepared and proactively realised within a corridor that is formed by external "crossroad" decisions on the different levels of energy and climate policy. A case study clarifies the presented strategic backcasting approach for local utilities. It also highlights the strengths and weaknesses of the method. Nicolai Herrmann (1981) studied energy and environmental management at Flensburg University and Griffith University (Australia). "Comprising more than 500 entries, the Encyclopedia of Research Design explains how to make decisions about research design, undertake research projects in an ethical manner, interpret and draw valid inferences from data, and evaluate experiment design strategies and results. Two additional features carry this encyclopedia far above other works in the field: bibliographic entries devoted to significant articles in the history of research design and reviews of contemporary tools, such as software and statistical procedures, used to analyze results. It covers the spectrum of research design strategies, from material presented in introductory classes to topics necessary in graduate research; it addresses cross- and multidisciplinary research needs, with many examples drawn from the social and behavioral sciences, neurosciences, and biomedical and life sciences; it provides summaries of advantages and disadvantages of often-used strategies; and it uses hundreds of sample tables, figures, and equations based on real-life cases."--Publisher's description.

easy to come by. Divine inspiration aside, historically we have depended primarily on observation, brainstorming, and trial-and-error methods to develop the innovations that provide solutions. But these methods are neither efficient nor dependable enough for the high-quality, high-tech engineering solutions we need today. TRIZ is a unique and powerful, algorithmic approach to problem solving that demonstrated remarkable effectiveness in its native Russia, and whose popularity has now spread to organizations such as Ford, NASA, Motorola, Unisys, and Rockwell International. Until now, however, no comprehensive, comprehensible treatment, suitable for self-study or as a textbook, has been available in English. *Engineering of Creativity* provides a valuable opportunity to learn and apply the concepts and techniques of TRIZ to complex engineering problems. The author—a world-renowned TRIZ expert—covers every aspect of TRIZ, from the basic concepts to the latest research and developments. He provides step-by-step guidelines, case studies from a variety of engineering disciplines, and first-hand experience in using the methodology. Application of TRIZ can bring high-quality—even breakthrough—conceptual solutions and help remove technical obstacles. Mastering the contents of *Engineering of Creativity* will bring your career and your company a remarkable advantage: the ability to formulate the best possible solutions for technical systems problems and predict future developments.

Recommended intake levels for nutrients and other dietary components were designed initially to prevent nutrient deficiency diseases in a given population, and the original methodological approach used to derive intake values did not include consideration for other applications. However, with the increasing globalization of information and the identification of a variety of factors specific to different population subgroups (e.g., young children and women of reproductive age) that influence their nutritional needs, there has been increasing recognition of the need to consider methodological approaches to deriving nutrient reference values (NRVs) that are applicable across countries and that take into account the varying needs of different population subgroups. There is a need for guidance and recommendations about methodological approaches, as well as their potential for application to an international process for the development of NRVs, and particularly for young children and women of reproductive age.
