Gerald Durrell's *My Family and Other Animals* is a charming and comic autobiographical novel. Fleeing the gloomy British climate, the Durrell clan move to Corfu carrying the bare essentials of life- acne cures for Margo; revolvers for Leslie; books for Larry and a jam jar full of caterpillars for Gerry. Recounted with warmth and humour, it is a heart-warming portrait of an eccentric family surrounded by a wonderful cast of friends and fauna.

The International Baccalaureate

Cambridge International AS and A Level Biology meets the requirements of the Cambridge syllabuses for Cambridge International AS level and A level Biology, and is endorsed by Cambridge for use with these examinations. In one volume, this textbook covers the complete AS level syllabus, the core A Level syllabus and the new Applications of Biology section. Each chapter starts with a list of learning objectives. Questions throughout the text reinforce students understanding, and

the past examinations questions help with revision. The accessible language means that the material is suitable for all students, including those for whom English is not their first language.

Astronomy is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope Astronomy was written, updated, and reviewed by a broad range of astronomers and astronomy educators in a strong community effort. It is designed to meet scope and sequence requirements of

Economics: AS and A Level

For much of the past century, the conflict between Israelis and Palestinians has been a defining feature of the Middle East. Despite billions of dollars expended to support, oppose, or seek to resolve it, the conflict has endured for decades, with periodic violent eruptions, of which the Israel-Gaza confrontation in the summer of 2014 is only the most recent. This executive summary highlights findings from a study by a team of RAND researchers that estimates the net costs and benefits over the next ten years of five alternative trajectories a two-state solution, coordinated unilateral withdrawal, uncoordinated unilateral withdrawal, nonviolent resistance, and violent uprising compared with the costs and benefits of a continuing impasse that evolves in accordance with present trends. The analysis focuses on economic costs related to the conflict, including the economic costs of security. In addition, intangible costs are briefly examined, and the costs of each scenario to the international community have been calculated. The study's focus emerged from an extensive scoping exercise designed to identify how RAND's objective, fact-based approach might promote fruitful policy discussion. The overarching goal is to give all parties comprehensive, reliable information about available choices and their expected costs and consequences. Seven key findings

were identified: A two-state solution provides by far the best economic outcomes for both Israelis and Palestinians. Israelis would gain over two times more than the Palestinians in absolute terms \$123 billion versus \$50 billion over ten years. But the Palestinians would gain more proportionately, with average per capita income increasing by approximately 36 percent over what it would have been in 2024, versus 5 percent for the average Israeli. A return to violence would have profoundly negative economic consequences for both Palestinians and Israelis; per capita gross domestic product would fall by 46 percent in the West Bank and Gaza and by 10 percent in Israel by 2024. In most scenarios, the value of economic opportunities gained or lost by both parties is much larger than expected changes in direct costs. Unilateral withdrawal by Israel from the West Bank would impose large economic costs on Israelis unless the international community shoulders a substantial portion of the costs of relocating settlers. Intangible factors, such as each party's security and sovereignty aspirations, are critical considerations in understanding and resolving the impasse. Taking advantage of the economic opportunities of a two-state solution would require substantial investments from the public and private sectors of the international community and from both parties.--

A Richard and Judy Summer 2013 Book Club pick. The Sea Change by Joanna Rossiter is a haunting and moving novel about a mother and a daughter, caught

between a tsunami and a war. Yesterday was Alice's wedding day. She is thousands of miles away from the home she is so desperate to leave, on the southernmost tip of India, when she wakes in the morning to see a wave on the horizon, taller than the height of her guest house on Kanyakumari beach. Her husband is nowhere to be seen. On the other side of the world, unhappily estranged from her daughter, is Alice's mother, Violet. Forced to leave the idyllic Wiltshire village, Imber, in which she grew up after it was requisitioned by the army during World War Two, Violet is haunted by the shadow of the man she loved and the wilderness of a home that lies in ruins. Amid the debris of the wave, Alice recollects the events of the hippie trail that led to her hasty marriage as she struggles to piece together the fate of the husband she barely knows. Meanwhile, Violet must return to Imber in order to let go of the life that is no longer hers - and begin the search for her daughter. Joanna Rossiter grew up in Dorset and studied English at Cambridge University before working as a researcher in the House of Commons and as a copy writer. In 2011 she completed an MA in Writing at Warwick University. *The Sea Change* is her first novel. She lives and writes in London.

The report gives a state-of-the-art overview of policies, regulations and incentives for the sustainable use of solar-powered irrigation technologies (SPIS) around the world. SPIS offer a viable, low-tech energy solution for irrigated agriculture, providing a reliable source of energy in remote areas, contributing to rural electrification, reducing energy costs for irrigation and enabling low emission agriculture. Nevertheless, SPIS have a significant initial investment cost and require innovative financing models to overcome this barrier to adoption, especially for small-scale farmers. Technical knowledge and service infrastructure is needed to ensure that the systems run effectively. Moreover, SPIS – if not adequately managed – bear the risk of fostering unsustainable water use as lower energy costs may lead to over-abstraction of groundwater. This report looks at how different countries work to create an enabling environment for SPIS technologies, while managing the risks that come with it.
