"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

Lessons for Multiplying and Dividing Fractions

Grades 5-6: In this book, Marilyn Burns tackles the topic of how to teach students to multiply and divide fractions -- and understand what they are doing. Through the lessons in this book, students build conceptual understanding of multiplying and dividing fractions as they develop proficiency. And teachers report that -- for the first time -- students really understand the underlying rationale for how we multiply and divide fractions and mixed numbers. - Publisher.
