John Fitzgerald Kennedy led his nation for little more than a thousand days, yet his presidency is intensely remembered, not merely as a byproduct of his tragic fate. Kennedy steered the nation away from the brink of nuclear war, initiated the first nuclear test ban treaty, created the Peace Corps, and launched American on its mission to the moon and beyond. JFK inspired a nation, particularly the massive generation of baby boomers, injecting hope and revitalizing faith in the American project. 2013 will mark the fiftieth anniversary of Kennedy's untimely death, a milestone to be marked by an avalanche of new books on his life and importance. Martin Sandler's *The Letters of John F. Kennedy* will stand out among them, as the only book that draws on letters from and to Kennedy, as collected at the Kennedy Presidential Library and Museum. Drawn from more than two million letters on file at the library--many never before published--this project presents readers with a portrait of both Kennedy the politician and Kennedy the man, as well as the times he lived in. Letters to and from the likes of Martin Luther King Jr, Clare Booth Luce, Pearl Buck, John Wayne, Albert Schweitzer, Linus Pauling, Willy

Early Childhood Assessment

Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs—who account for more than 9 percent of enrollment in grades K-12 in U.S. schools—are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research

As budgets tighten for school districts, a sound understanding of just how teaching and administration translate into student learning becomes increasingly important. Rebecca Barr, a researcher of classroom instruction and reading skill development, and Robert Dreeben, a sociologist of education who analyzes the structure of organizations, combine their expertise to explore the social organization of schools and classrooms, the division of labor, and the allocation of key resources. Viewing schools as part of a social organization with a hierarchy of levels—district, school, classroom, instructional group, and students—avoids the common pitfalls of lumping together any and all possible influences on student learning without regard to the actual processes of the classroom. Barr and Dreeben systematically explain how instructional groups originate, form, and change over time. Focusing on first grade reading instruction, their study shows that individual reading aptitude actually has little direct relation to group reading achievement and virtually none to the coverage of reading materials once the mean aptitude of groups is taken into consideration. Individual aptitude, they argue, is rather the basis on which teachers form reading

groups that are given different instructional treatment. It is these differences in group treatment, they contend, that explain substantial differences in learning curricular material.

Nowadays, heavy industrial robots placed in workcells are being replaced by new age robots called cobots, which don't need workcells. They are used in manufacturing, retail, banks, energy, and healthcare, among other domains. One of the major reasons for this rapid growth in the robotics market is the introduction of an open source robotics framework called the Robot Operating System (ROS). This book covers projects in the latest ROS distribution, ROS Melodic Morenia with Ubuntu Bionic (18.04). Starting with the fundamentals, this updated edition of ROS Robotics Projects introduces you to ROS-2 and helps you understand how it is different from ROS-1. You'll be able to model and build an industrial mobile manipulator in ROS and simulate it in Gazebo 9. You'll then gain insights into handling complex robot applications using state machines and working with multiple robots at a time. This ROS book also

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.
