Writing is a challenging task for many children. To address this issue, many educational researchers advocate for schools to implement a multi-tiered systems of support (MTSS) model where struggling writers can be detected as early as kindergarten and provided with intervention programming to improve their skills and hopefully not need long-term placement in special education. Traditionally, schools have employed the wait-to-fail model where children were offered the opportunity to learn to read, write, and do math in the first few years of elementary school; if they still struggled at the end of third grade (age eight), then they would be assessed for special education. The problem with this was not only a delayed assessment timeline, but also the standardized tests not having an adequate set of questions to assess early-elementary grade skills, as well as the ethical problems and racial/ethnic biases of test questions. MTSS provides educators with a renewed emphasis on early intervention and progress-monitoring assessment once or twice a week to monitor each student's skills and make instructional changes to promote success. This book offers a description and case examples of how schools and teachers can apply MTSS concepts for writing.

While most children learn to read fairly well, there remain many young Americans whose futures are imperiled because they do not read well enough to meet the demands of our competitive, technology-driven society. This book explores the problem within the context of social, historical, cultural, and biological factors. Recommendations address the identification of groups of children at risk, effective instruction for the preschool and early grades, effective approaches to dialects and bilingualism, the importance of these findings for the professional development of teachers, and gaps that remain in our understanding of how children learn to read. Implications for parents, teachers, schools, communities, the media, and government at all levels are discussed. The book examines the epidemiology of reading problems and introduces the concepts used by experts in the field. In a clear and readable narrative, word identification, comprehension, and other processes in normal reading development are discussed. Against the background of normal progress, Preventing Reading Difficulties in Young Children examines factors that put children at risk of poor reading. It explores in detail how literacy can be fostered from birth through kindergarten and the primary grades, including evaluation of philosophies, systems, and materials commonly used to teach reading.

writing-with rubrics, graphic organizers, editing checklists, and more. Writers become better by writing. In this book, master teacher Marilyn Pryle offers plenty of standards-based activities to keep students constantly writing. She starts with eight "practices" that help students generate ideas and develop habits to improve their writing. They then apply these practices as they tackle any of the 42 assignments in narrative, expository, and persuasive writing. Includes rubrics, prewriting sheets, graphic organizers, writing models, editing checklists, and more.

Veteran teacher and author Dan Feigelson raises an important question about the larger goal of reading instruction: while it's our job as reading teachers to introduce students to new ideas and comprehension strategies, shouldn't we also teach them to come up with their own ideas - without teacher prompting? In *Reading Projects Reimagined*, Feigelson shows us how conference-based, individual reading projects help students learn how to think for themselves. He provides a concrete picture of what reading projects look and sound like in the classroom with: step-by-step guidelines on how to conduct a productive conference categories to help teachers narrow down possible directions a conference could go examples of student work and teacher-student dialogue. When readers go beyond simple comprehension questions to extend their own ideas, they're on their way to becoming independent, critical thinkers who can read any text with depth and thoughtfulness. Praise for *Reading Projects Reimagined*: "Dan Feigelson is one of our shrewdest and most versatile thinkers in the field of literacy, a guy who can draw from his experiences as classroom teacher, staff developer, principal, and superintendent. In this fascinating book, Dan gives a new vision for the reading conference in which teachers can help students name their own ideas, and use them as tools for deeper comprehension."-Ralph Fletcher "This book contains some of the best writing about conferring with children that I've read."-Carl Anderson If you have ever wondered how to bring more substance, more gravitas, to reading conferences, this book will provide you with an array of possibilities. Dan Feigelson is absolutely clear that he is not offering a set of scripts for conferences; instead he

shows us how to help each child develop a sense of the possible."-Ellin Keene "In Reading Projects Reimagined, Dan Feigelson reminds us of a radical and grounding premise, that a truly effective reading conference, one that can change a reading life, prioritizes the reader, not the standards or test prep. Dan shows us how to shine a light on children's words and intentions in ways that can increase their engagement with texts and inspire investment in their own text-based ideas."-Kathy Collins
