The College Board College Handbook 2000

Even as the number of students attending college has more than doubled in the past forty years, it is still the case that nearly half of all college students in the United States will not complete their degree within six years. It is clear that much remains to be done toward improving student success. For more than twenty years, Vincent Tinto's pathbreaking book *Leaving College* has been recognized as the definitive resource on student retention in higher education. Now, with *Completing College*, Tinto offers administrators a coherent framework with which to develop and implement programs to promote completion. Deftly distilling an enormous amount of research, Tinto identifies the essential conditions enabling students to succeed and continue on within institutions. Especially during the early years, he shows that students thrive in settings that pair high expectations for success with structured academic, social, and financial support, provide frequent feedback and assessments of their performance, and promote their active involvement with other students and faculty. And while these conditions may be worked on and met at different institutional levels, Tinto points to the classroom as the center of student education and life, and therefore the primary target for institutional action. Improving retention rates continues to be among the most widely studied fields in higher education, and *Completing College* carefully synthesizes the latest research and, most importantly, translates it into practical steps that administrators can take to enhance student success.

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

HESI Comprehensive Review for the NCLEX-RN Examination

The thirty-five chapters in this book describe various judgmental heuristics and the biases they produce, not only in laboratory experiments but in important social, medical, and political situations as well. Individual chapters discuss the representativeness and availability heuristics, problems in judging covariation and control, overconfidence, multistage inference, social perception, medical diagnosis, risk perception, and methods for correcting and improving judgments under uncertainty. About half of the chapters are edited versions of classic articles; the remaining chapters are newly written for this book. Most review multiple studies or entire subareas of research and application rather than describing single experimental studies. This book will be useful to a wide range of students and researchers, as well as to decision makers seeking to gain insight into their judgments and to improve them.

First published in 1932, *The Experimental College* is the record of a radical experiment in university education. Established at the University of Wisconsin in Madison in 1927 by innovative educational theorist Alexander Meiklejohn, the "Experimental College" itself was to be a small, intensive, residence-based program within the larger university that provided a core curriculum of liberal education for the first two years of college. Aimed at finding a method of teaching whereby students would gain "intelligence in the conduct of their own lives," the Experimental College gave students unprecedented freedom. Discarding major requirements, exams, lectures, and mandatory attendance, the program reshaped the student-professor relationship, abolished conventional subject divisions, and attempted to find a new curriculum that moved away from training students in crafts, trades, professions, and traditional scholarship. Meiklejohn and his colleagues attempted instead to broadly connect the democratic ideals and thinking of classical Athens with the dilemmas of daily life in modern industrial America. The experiment became increasingly controversial within the university, perhaps for reasons related less to pedagogy than to personalities, money, and the bureaucratic realities of a large state university. Meiklejohn's program closed its doors after only five years, but this book, his final report on the experiment, examines both its failures and its triumphs. This edition brings back into print Meiklejohn's original, unabridged text,

supplemented with a new introduction by Roland L. Guyotte. In an age of increasing fragmentation and specialization of academic studies, *The Experimental College* remains a useful tool in any examination of the purposes of higher education. "Alexander Meiklejohn's significance in the history of American education stems largely from his willingness to put ideas into action. He tested abstract philosophical theories in concrete institutional practice. *The Experimental College* reveals the dreams as well as the defeats of a deeply idealistic reformer. By asking sharp questions about enduring purposes of liberal democratic education, Meiklejohn presents a message that is meaningful and useful in any age."--Adam Nelson author of *Education and Democracy: The Meaning of Alexander Meiklejohn* o A reprint of the unabridged, original 1932 edition o Published in partnership with the University of Wisconsin-Madison Libraries

The Complete Book of Colleges

This book is for instructors who think that most calculus textbooks are too long. In writing the book, James Stewart asked himself: What is essential for a three-semester calculus course for scientists and engineers? *ESSENTIAL CALCULUS: EARLY TRANSCENDENTALS*, Second Edition, offers a concise approach to teaching calculus that focuses on major concepts, and supports those concepts with precise definitions, patient explanations, and carefully graded problems. The book is only 900 pages--two-thirds the size of Stewart's other calculus texts, and yet it contains almost all of the same topics. The author achieved this relative brevity primarily by condensing the exposition and by putting some of the features on the book's website, www.StewartCalculus.com. Despite the more compact size, the book has a modern flavor, covering technology and incorporating material to promote conceptual understanding, though not as prominently as in Stewart's other books. *ESSENTIAL CALCULUS: EARLY TRANSCENDENTALS* features the same attention to detail, eye for innovation, and meticulous accuracy that have made Stewart's textbooks the best-selling calculus texts in the world. Radical Constructivism in Action

Over the last twenty-five years Ernst von Glasersfeld has had a tremendous impact on mathematics and science education through his fundamental insights into the nature of knowledge and knowing. *Radical Constructivism in Action* is a new volume of papers honouring his work by building on his model of knowing. The contributions by leading researchers present constructivism in action, tying the authors' actions regarding practical problems of mathematics and science education, philosophy, and sociology to their philosophical constraints, giving meaning to constructivism operationally. The book begins with a retrospective analogy between radical constructivism's emergence and changes in what is thought of as "certain" scientific knowledge. It aims to increase understanding of constructivism and Glasersfeld's achievement, and is vibrant evidence of the continued vitality of research in the constructivism tradition.

Condition of Education 2011

The College Board College Handbook

Discussing race and racism often conjures up emotions of guilt, shame, anger, defensiveness, denial, sadness, dissonance, and discomfort. Instead of suppressing those feelings, coined emotionalities of whiteness, they are, nonetheless, important to identify, understand, and deconstruct if one ever hopes to fully commit to racial equity. *Feeling White: Whiteness, Emotionality, and Education* delves deeper into these white emotionalities and other latent ones by providing theoretical and psychoanalytic analyses to determine where these emotions stem, how they operate, and how they perpetuate racial inequities in education and society. The author beautifully weaves in creative writing with theoretical work to artistically illustrate how these emotions operate while also engaging the reader in an emotional experience in and of itself, claiming one must feel to understand. This book does not rehash former race concepts; rather, it applies them in novel ways that get at the heart of humanity, thus revealing how feeling white ultimately impacts race relations. Without a proper investigation on these underlying emotions, that can both stifle or enhance one's commitment to racial justice in education and society, the field of education denies itself a proper emotional preparation so needed to engage in prolonged educative projects of racial and social justice. By digging deep to what impacts humanity most—our hearts—this book dares to expose one's daily experiences with race, thus individually challenging us all to self-investigate our own racialized emotionalities. "Drawing on her deep wisdom about how race works, Cheryl Matias directly interrogates the emotional arsenal white people use as shields from the pain of confronting racism, peeling back its layers to unearth a core of love that can open us up. In *Feeling White: Whiteness, Emotionality, and Education*, Matias deftly names and deconstructs distancing emotions,

prodding us to stay in the conversation in order to become teachers who can reach children marginalized by racism.” – Christine Sleeter, Ph.D., Professor Emeritus, California State University, Monterey Bay “In *Feeling White*, Cheryl E. Matias blends astute observations, analyses and insights about the emotions embedded in white identity and their impact on the racialized politics of affect in teacher education. Drawing deftly on her own classroom experiences as well as her mastery of the methodologies and theories of critical whiteness studies, Matias challenges us to develop what Dr. King called ‘the strength to love’ by confronting and conquering the affective structures that promote white innocence and preclude white accountability.” – George Lipsitz, Ph.D., Professor, University of California, Santa Barbara, and author of *The Possessive Investment in Whiteness* Cheryl E. Matias, Ph.D., is an assistant professor in the School of Education and Human Development at the University of Colorado Denver. She is a motherscholar of three children, including boy-girl twins."
