### **Wiley Pathways Small Business Accounting**

Everybody's Business is a succinct analysis of the factors that led to the founding of American business schools and why they are the way they are. Mitroff, Alpaslan, and O'Connor consider why current business schools do not give students the knowledge and the tools they need to deal with today's complex, messy problems and systems.

Pastors are schooled in theology and ministry, but few receive training in the fine points of church administration. Learning how to handle a congregation's finances "on the job" can be a harrowing experience. Yet efficiently managing your church's business affairs is a key element in keeping current members satisfied with their pastoral leadership -- and in attracting the new members you need for your church to grow in size and influence. In Basic Business Principles For Growing Churches, Arnold Cirtin shares expertise gained from more than four decades of corporate and academic experience. He provides a clear and helpful primer for pastors with limited training in business administration on such practical topics as accounting, fiscal management, and marketing. This is an indispensable book for pastors of small- and medium-sized churches (who typically are also their congregations' principal financial officers), as well as for church treasurers, trustees, and other financial board members. When you follow the guidelines in Basic Business Principles For Growing Churches, your church will be fiscally responsible, managed efficiently, and able to maximize its growing stewardship of God's resources. Arnold Cirtin is professor emeritus of accounting at Ball State University, and is a certified public accountant (CPA) in the states of Indiana and California. Cirtin is the author of Principles of Accounting Study Guide, as well as numerous articles in professional journals.

## **Understanding Business Math & Budgets**

Master decision modeling and analytics through realistic examples, intuitive explanations, and tested Excel templates. Business Analytics with Management Science has been designed to help students, practitioners and managers use business analytics to improve decision-making systems. Unlike previous books, it emphasizes the application of practical

management science techniques in business analytics. Drawing on 20+ years of teaching and consulting experience, Dr. Arben Asllani introduces decision analytics through realistic examples and intuitive explanations – not complex formulae and theoretical definitions. Throughout, Asllani helps practitioners focus more on the crucial input-output aspects of decision making – and less upon internal model complexities that can usually be "delegated" to software.

MATH PRINCIPLES FOR FOOD SERVICE OCCUPATIONS, 6E stresses the direct relevance of math skills in the food service industry while teaching the basic math principles that affect everything from basic recipe preparation to managing food and labor costs in a restaurant operation. All the mathematical problems and concepts presented are explained in a simplified, logical, step-by-step manner. New to this edition, illustrations in full color add visual appeal to the text and help culinary students to master important concepts. Now in its 6th edition, this book demonstrates the importance of understanding and using math concepts to effectively make money in this demanding business. Part 1 trains your students to use the calculator. Part 2 reviews basic math fundamentals. Subsequent parts address math essentials and cost controls in food preparation and math essentials in food service record keeping, while the last part of the book concentrates on managerial math. New topics to this 6th edition include controlling beverage costs; clarifying and explaining the difference between fluid ounces and avoirdupois ounces; and an entire new section on yield testing and how to conduct these tests. There are new methods using helpful memory devices and acronyms to help the student remember procedures and formulas, such as BLT, NO, and the Big Ounce. New strategies and charts are also shown and explained on how to use purchases in order to control food and beverage costs and how transfers affect food and beverage costs. In addition, sections have been added on how to control costs using food (or liquor, or labor) cost percentage guidelines. The content in MATH PRINCIPLES FOR FOOD SERVICE OCCUPATIONS, 6E meets the required knowledge and competencies for business and math skills as required by the American Culinary Federation.
