The Hot Shoe Diaries

THE FIRST BOOK WITH ONE FOOT ON THE COFFEE TABLE, AND ONE FOOT IN THE CLASSROOM Joe McNally, one of the world's top pro digital photographers, whose celebrated work has graced the pages of Sports Illustrated, Time, and National Geographic (to name a few), breaks new ground by doing something no photography book has ever done—blending the rich, stunning images and elegant layout of a coffee-table book with the invaluable training, no-nonsense insights, and photography secrets usually found only in those rare, best-of-breed educational books. When Joe's not on assignment for the biggest-name magazines and Fortune 500 clients, he's in the classroom teaching location lighting, environmental portraiture, and how to “get the shot” at workshops around the world. These on-location workshops are usually reserved for a handful of photographers each year, but now you can learn the same techniques that Joe shares in his seminars and lectures in a book that brings Joe's sessions to life. What makes the book so unique is the “triangle of learning” where (1) Joe distills the concept down to one brief sentence. It usually starts with something like, “An editor at National Geographic once told me...” and then he shares one of those hard-earned tricks of the trade that you only get from spending a lifetime behind the lens. Then, (2) on the facing page is one of Joe's brilliant images that perfectly illustrates the technique (you'll recognize many of his photos from magazine covers). And (3) you get the inside story of how that shot was taken, including which equipment he used (lens, f/stop, lighting, accessories, etc.), along with the challenges that type of project brings, and how to set up a shot like that of your own.

This book also gives you something more. It inspires. It challenges. It informs. But perhaps most importantly, it will help you understand photography and the art of making great photos at a level you never thought possible. This book is packed with those “Ah ha!” moments—those clever insights that make it all come together for you. It brings you that wonderful moment when it suddenly all makes sense—that “moment it clicks.”

When it comes to photography, it's all about the light. After spending more than thirty years behind the lens—working for National Geographic, Time, Life, and Sports Illustrated—Joe McNally knows about light. He knows how to talk about it, shape it, color it, control it, and direct it. Most importantly, he knows how to create it using small hot shoe flashes. In *The Hot Shoe Diaries*, Joe brings you behind the scenes to candidly share his lighting solutions for a ton of great images. Using Nikon Speedlights, Joe lets you in on his uncensored thought process—often funny, sometimes serious, always fascinating—to demonstrate how he makes his pictures with these small flashes. Whether he's photographing a gymnast on the Great Wall, an alligator in a swamp, or a fire truck careening through Times Square, Joe uses these flashes to create great light that makes his pictures sing.

The story of this groundbreaking summer dance program is told through the voices of staff, faculty, and students. Administrative director Mary Josephine Shelly's previously unpublished writings form a key summary of eight of the nine summer sessions. The Bennington School of the Dance held classes from 1934 through 1942 at Bennington College in Vermont, with one summer spent at Mills College in California. Its effects were far-reaching in the development and dissemination of modern dance as an original American art form. The school produced unique

choreographic works by teachers in residence: Martha Graham, Hanya Holm, Doris Humphrey, and Charles Weidman. Leading choreographers of the later 20th century such as Merce Cunningham, Anna Halprin, Jose Limon, Alwin Nikolais and Anna Sokolow participated at the school. The largest portion of students were high school and college level teachers who would spread modern dance across the country and abroad.

Gene Wolfe's *BOOK OF THE NEW SUN* has been hailed by both critics and readers as quite possibly the best science fiction novel ever written. And yet at the same time, like another masterpiece of fiction, James Joyce's *Ulysses*, it's been deemed endlessly complex and filled with impenetrable mysteries. Now, however, in the first book-length investigation of Wolfe's literary puzzlebox, Robert Borski takes you inside the twisting corridors of the tetralogy and along the way reveals his solutions to many of the novel's conundrums and riddles, such as who really is Severian's lost twin sister (almost certainly not who you think) and why he believes the novel's main character may not even be the torturer Severian. Furthermore, and in essay after essay, Borski demonstrates how a single master key will unlock many of the book's secret relationships—all in the attempt to guide you through the labyrinth that

is Gene Wolfe's BOOK OF THE NEW SUN.

In our view, the First International Penicillium and Aspergillus Workshop held in Baarn and Amsterdam in May, 1985, was a great success. The assembly in one place of so many specialists in these two genera produced both interesting viewpoints and lively discussions. But more particularly, a remarkable cohesion of ideas emerged, borne primarily of the realisation that taxonomy has passed from the hands of the solitary morphologist. The future of taxonomy lay in collaborative and multidisciplinary studies embracing morphology, physiology and newer methodologies. Penicillium and Aspergillus Workshop was borne logically The Second International from the first, and was held in Baarn on May 8-12, 1989. It was attended by 38 scientists from 16 countries. At this Workshop we have attempted to move further into new methods, especially by bringing together molecular biologists, medical and food mycologists and biochemists as well as more traditional taxonomists. We feel that the meeting contributed greatly to dialogue between taxonomists, and also fundamental and applied mycologists. At the meeting, we became aware that the approach to taxonomy of these genera is now becoming more pragmatic, with an increasing emphasis on consensus, and on stability of names. This is a noteworthy development, which we, as editors, welcome. So many species in Penicillium and Aspergillus are economically important in biotechnology, foods and medicine, and

practical, stable taxonomy is of vital importance. These Proceedings comprise 40 papers divided into 9 chapters.

This book reveals the strain of a moment in American cultural history that led several remarkable writers -- including Emerson, Warner, and Melville -- to render the stark rupture of loss in innovative ways. Pushing Protestant culture's sense of loss into secular terrain, these three key writers rejected Calvinist and sentimental models of bereavement, creating instead the compensations of a mature American literature whose 'originality' stemmed from its capacity to mourn the loss of a common culture and, through such mourning, to assent to new social and cultural realities. Balaam locates this appeal to 'reality' in the analogies antebellum writers drew between their experience of bereavement, and the experiences of

uncertainty and disillusionment, that followed the revolutions in science, the winding down of creedal systems and the economic instability typifying the pre-Civil War era.
