IPECS USER GUIDES

The 10.0.0.1 IP Address. The 10.0.0.1 IP address is special because it can be used more than once. It belongs to the 24-bit block of private IP address, which are used for local area networks (LANs). Unlike public IP addresses, it's not possible to route private IP addresses through the internet, but that doesn't make them useless.

Business telephone system - Wikipedia

A Session Border Controller or SBC is a special-purpose device that protects and regulates IP communications flows. As the name implies, session border controllers are deployed at network borders to control IP communications sessions. Originally conceived to protect and control VoIP networks, SBCs are now used to regulate all forms of real-time communications including VoIP, IP video, text

Ribbon Ecosystem | Network Communication Services

This default IP address of most Linksys routers is one of 65,536 IP addresses in the 16-bit block of the private IPv4 address space, which includes addresses from 192.168.0.0 to 192.168.255.255. Private IP addresses are used for local area networks (LANs), and they were defined in an effort to delay IPv4 address exhaustion.
