Handle Your Hardware: Check for Mountain Lion compatibility, clear extra files and software off your disk, and test your Mac to be sure all the hardware and disks are running properly--better to discover and correct a problem now than on upgrade day. Deal with duplication: Learn why having a duplicate of your hard disk is essential before installing Mountain Lion, and how to make one. Consider a few geeky details: If you secure your data and documents with disk encryption now, or would like to under Mountain Lion, get advice on what to do before you upgrade and learn why Joe likes Apple's FileVault 2. Also, read what Joe thinks of partitioning and what you might want to do about it before installing. Do the upgrade: Run the Mountain Lion installer, choosing all the optimal settings and options for your computer and tastes, and make sure all your personal data is still in place afterward. Perform post-installation tasks: You're not done when the installer is - be sure to run Software Update, set up necessary user accounts, and (perhaps) turn on FileVault and Time Machine. You'll find help with troubleshooting any problems that may have occurred with your upgrade. Go beyond the basics: Joe even covers topics such as the basics of installing Mountain Lion Server; moving from an older Mac to a newer one that already has Mountain Lion installed; and using Recovery mode to fix disk problems, reinstall Mountain Lion, and perform other maintenance tasks.
