The Oxford Book of English Short Stories

The special problems and opportunities presented by island tourism are major new areas of interest for both tourism academics and professionals, prompting much discussion and debate. This is the first book to focus on how management and organisational issues affect small islands and their tourism industries, and to examine the factors which affect tourism on small islands. International contributors, including practitioners and researchers examine this important topic and discuss a diversity of inter-related themes, including policy areas; public/private sector planning partnerships; product development; marketing; human resource management; and sustainability. These general issues are complemented with case studies which illustrate the application of island management principles. For undergraduates, graduates and professionals in the tourism field, this book is an essential guide to island tourism management.

In Time O' Strife

Love—good and bad—forces three teens' worlds to tilt in a riveting standalone novel from #1 New York Times bestselling author Ellen Hopkins. Three teens, three stories—all interconnected through their parents' family relationships. As the adults pull away, caught up in their own dilemmas, the worlds of the teens begin to tilt. Mikayla, almost eighteen, is over-the-top in love with Dylan, who loves her back jealously. But what happens to that love when Mikayla gets pregnant the summer before their senior year and decides to keep the baby? Shane turns sixteen that same summer and falls hard in love with his first boyfriend, Alex, who happens to be HIV positive. Shane has lived for four years with his little sister's impending death. Can he accept Alex's love, knowing his life, too, will be shortened? Harley is fourteen—a good girl

searching for new experiences, especially love from an older boy. She never expects to hurdle toward self-destructive extremes in order to define who she is and who she wants to be. Love, in all its forms, has crucial consequences in this wrenching story from Ellen Hopkins.

Palm Programming in Basic provides a foundation upon which programmers can develop applications for the Palm OS with very little knowledge of the OS itself. It is a comprehensive reference that gets professional programmers up to speed on AppForge, NS Basic, and CASL. The author, Jon Kilburn, shares his vast experience as a developer of dozens of applications for Palm OS in presenting the Palm programming strategies contained in this book. Kilburn clearly explains how to structure programs for Palm devices and how to develop conduits for passing information between PC desktops and Palm devices, and reviews the conduit tools available to developers. Palm Programming in Basic also includes a guide to developing Web Clipping applications, an overview of Palm utilities that all programmers can use, and an appendix on performing data compression.

Poland, Homer, and Other Poems

Master storyteller Sonya Hartnett crafts a magical and moving fable about war and redemption . . . and what it means to be free. When the Germans attack their Romany encampment during World War II, Andrej and his younger brother, Tomas,

flee through a ravaged countryside under cover of darkness, guarding a secret bundle. Their journey leads to a bombed-out town, where the boys discover a hidden wonder: a zoo filled with creatures in need of hope. Like Andrej and Tomas, the animals--wolf and eagle, monkey and bear, lioness and seal, kangaroo and llama-- have stories to share and a mission to reclaim their lives.

The demand for, and interest in, high-capacity, high-performance disk storage systems is soaring. In the 1980s, only banks, airlines, and the government needed to have their data online and available at all times. Today, businesses and organizations of every size require it for local area network servers, web servers, enterprise-wide networks, etc. Redundant Arrays of Independent Disks (RAID) is the disk storage technology that is revolutionizing the ways online computer data is stored. Originally developed for mainframes, RAID technology is now used for supercomputers, mainframes, minicomputers, servers, even high-end workstations - and soon personal computers. This text co-written by the RAID Advisory Board, is a technical handbook on RAID and other modern data storage technologies.

To make matters worse, the man with red eyes that haunted my dreams is appearing in real life and demonic creatures keep showing up in Salem. The question on both counts is why? Nineteenth Century Collections Online: European Literature, 1790-1840: The Corvey Collection includes the full-text of more than 9,500 English, French and German titles. The collection is sourced from the remarkable library of Victor Amadeus, whose Castle Corvey collection was one of the most spectacular discoveries of the late 1970s. The Corvey Collection comprises one of the most important collections of Romantic era writing in existence anywhere -- including fiction, short prose, dramatic works, poetry, and more -- with a focus on especially difficult-to-find works by lesser-known, historically neglected writers. The Corvey library was built during the last half of the 19th century by Victor and his wife Elise, both bibliophiles with varied interests. The collection thus contains everything from novels and short stories to belles lettres and more populist works, and includes many exceedingly rare works not available in any other collection from the period. These invaluable, sometimes previously unknown works are of particular interest to scholars and researchers. This is the first introductory book on the theory of prehomogeneous vector spaces, introduced in the 1970s by Mikio Sato. The author was an early and important developer of the theory and continues to be active in the field. This book explains the basic concepts of prehomogeneous vector spaces, the fundamental theorem, the zeta functions associated with prehomogeneous vector spaces and a classification theory of irreducible prehomogeneous vector spaces. This book is

written for students, and is appropriate for second-year graduate level and above. However, because it is self-contained, covering algebraic and analytic preliminaries in considerable detail, the content may in fact prove to be accessible to many advanced undergraduate and beginning graduate students. It also provides a useful introduction for working mathematicians who want to learn about prehomogeneous vector spaces.

Ashes of the Sun

There's nae power on earth can crush the men who can sing on a day like this. A powerful re-imagining of Joe Corrie's neglected classic about a Fife mining community during the General Strike. To raise funds for the soup kitchens feeding the miners and their starving families, Corrie wrote In Time O' Strife in 1926 whilst on strike himself, exposing the brutal lives of a family staring hunger and defeat in the face. Some 87 years later, Graham McLaren has adapted, designed and directed this rarely performed classic play. Created by Graham McLaren (Men Should Weep, A Christmas Carol), the production uses fragments of Corrie's other plays, poems and songs, celebrating his ability as a writer and his contribution to Scottish culture. This edition pairs Corrie's original text with the script created by McLaren's adaptation process.
