Gravitational Lenses

Galaxy scrapbook paper by Crafty Prints is 8.5" x 11" designer craft paper. With 20 sheets single-sided 5 each of 4 designs Great for your next scrapbooking and paper craft project.

The Origins of the Universe for Dummies

Galaxy 5x5 Graph Paper Notebook for creating designs and plans! Makes an excellent gift idea for birthdays, Christmas, coworkers or any special occasion, great for all Astronauts! YOU WILL GET: 6x9 Inch.(15.24x22.86 cm) Size 5x5 Graph Paper 120 pages Beautiful Cover Softcover bookbinding Flexible Paperback Great gift idea

Celestial Galaxy Moon & Stars Scrapbook Paper

Galaxy Formation

This collection teaches you how to fold 37 original origami stars, each from a single square sheet of paper. Great care has

been taken to keep each folding sequence elegant. The models are amazing and striking, are enjoyable to fold, and can be used as awards and decorations, and on festive occasions. Several stars use both sides of the paper to highlight interesting color patterns. Duo origami paper, which has a different color on each side, is ideal for these models. Most of the stars are two-dimensional and a few are three-dimensional. Several sets of related stars are included. There are solid-color and two-toned models. The radiant stars each have an impressive alternating color pattern. The twelve-point star looks as if it was woven from strips of paper. The magic star resembles a model made from eight sheets, but is easily folded from a single square, like all the others in this book. Most of the designs are by John Montroll; several are by Russell Cashdollar. The models range from simple to complex, but not too complex. Clear step-by-step instructions show how to fold stars with varying number of points, shapes, and color patterns.

Lyman Alpha Emitting Galaxies at High Redshift

When her rooster is kidnapped by the fox, a hen builds a paper wagon, harnesses it with two mice, and heads into the forest to save him, gathering friends along the way.

Origami Galaxy for Kids Kit

Kids love origami—and what could be cooler than transforming a piece of paper into Boba Fett, Princess Leia, Yoda, or R2-D2? And not just any paper, but custom-designed paper illustrated with art from the movies. Star Wars® Origami marries the fun of paper folding with the obsession of Star Wars. Like *The Joy of Origami* and *Origami on the Go*, this book puts an original spin on an ancient art. And like *Star Wars® Scanimation®* and *Star Wars® Fandex®*, it's a fresh take on Star Wars mania. Chris Alexander is a master folder and founder of the popular website StarWarsOrigami.com, and here are 36 models, clearly explained, that range in difficulty from Youngling (easy) to Padawan (medium), Jedi Knight (difficult), and Jedi Master (tricky!). A front section introduces origami definitions and basic folds. Bound in the back is the book's unique folding paper, two sheets for each figure. Illustrated with original art, it makes each creation—the essential lightsabers, the Death Star, and much more—true to the movies. *Star Wars Origami* includes a foreword by Tom Angleberger, author of the New York Times bestsellers *The Strange Case of Origami Yoda* and *Darth Paper Strikes Back*, and is scheduled to be published at the same time as Angleberger's upcoming book, *The Secret of the Fortune Wookiee*.

From Galaxies to Turbines

Paper

Provides instructions for creating astronomy-themed paper projects, including different types of stars, a space station, and a martian.

ESO Workshop on the Virgo Cluster of Galaxies

The Road to Galaxy Formation

The Milky Way has captivated the mind of multitudes ever since the beginning of time. Particularly striking are its apparent dusty gaping voids. With the advent of near-infrared technology, astronomers have discovered an awesome new view of its structure, and of the structure of other galaxies around us. Galaxies are encased within Shrouds of the Night: shrouds or veils of cosmic dust, which have given us a totally incomplete picture of what our majestic Universe actually looks like. In this book, we feature some of the remarkable early photographic work of masters such as Isaac Roberts and Edward Barnard, before presenting to the reader the unmasked (dust penetrated) view of our cosmos, using some of the world's largest ground and space-based telescopes.

External Galaxies and Quasi-Stellar Objects

As adventurers of the grand cosmos, Mr. Jason Space and Captain Helena Galaxy seek to discover new worlds and new adventures and to have fun while doing it. They will never do paid mercenary work, no matter how good the offer, for they are explorers and not mercenaries. They will complete every mission they undertake, no matter how much trouble it gets them into. And they will never give up, regardless of whatever menacing aliens or dangerous obstacles they run into. The complete season one collection includes: Episode One: Lights, Camera, Impact! Episode Two: Rocky Episode Three: Mother Episode Four: Never Work with Old Bosses Episode Five: The Phantom of the Jungle PLUS all five Spacetastic Interviews! KEYWORDS: science fiction action adventure series, science fiction action adventure humor, science fiction serial, science fiction humorous, science fiction humor serial, science fiction comedy, science fiction comedy adventure, science fiction collection, humorous science fiction short stories

Galaxy Scrapbook Paper

Star Wars Origami

As late as 1995, the anticipated widespread population of primeval galaxies remained at large, lurking undetected at unknown redshifts, with undiscovered properties. We present results from our efforts to detect and characterize primeval galaxies by their signature high-redshift Lyman-alpha emission lines utilizing two observational techniques: serendipitous slit spectroscopy and narrowband imaging. By pushing these techniques to their utmost limits, we probe the Lyman-alpha-emitting galaxy population out to redshifts as high as $z = 6.5$. Galaxies at this epoch reside in a universe which is just 800 million years old, a mere 6% of its current age. As such, this work provides one account of the manner by which observational cosmology has recently shifted from merely marveling at the incredible lookback times implied by the first few high-redshift detections, to the routine assembly of high-redshift datasets designed to address specific astrophysical issues.

The Best Geographer in the Galaxy: Isometric Dot Paper Notebook Book 120 Pages 6"x9"

Proceedings of IAU Symposium No. 44 held in Uppsala, Sweden, August 10-14, 1970

Galaxy

The Youth's Galaxy

Readers with any kind of an interest in astronomy will find this work fascinating, detailing as it does the proceedings of the symposium of the same name held in Japan in 2006. The symposium focused on mapping the interstellar media and other components in galactic disks, bulges, halos, and central regions of galaxies. Thanks to recent progress in observations using radio interferometers and optical/infrared telescopes in ground and space, our knowledge on structures of our Galaxy and nearby galaxies has been growing for the last decade.

Shrouds of the Night

This volume contains the edited texts of the lectures presented at the Workshop on Nonlinear Optimization held in Erice, Sicily, at the "G. Stampacchia" School of Mathematics of the "E. Majorana" Centre for Scientific Culture, June 23 -July 2, 1998. In the tradition of these meetings, the main purpose was to review and discuss recent advances and promising research trends concerning theory, algorithms and innovative applications in the field of Nonlinear Optimization, and of related topics such as Convex Optimization, Nonsmooth Optimization, Variational Inequalities and Complementarity Problems. The meeting was attended by 83 people from 21 countries. Besides the lectures, several formal and informal

discussions took place. The result was a wide and deep knowledge of the present research tendencies in the field. We wish to express our appreciation for the active contribution of all the participants in the meeting. Our gratitude is due to the Ettore Majorana Centre in Erice, which offered its facilities and rewarding environment: its staff was certainly instrumental for the success of the meeting. Our gratitude is also due to Francisco Facchinei and Massimo Roma for the effort and time devoted as members of the Organising Committee. We are indebted to the Italian National Research Council, and in particular to the Group on Functional Analysis and its Applications and to the Committees on Engineering Sciences and on Information Sciences and Technologies for their financial support. Finally, we address our thanks to Kluwer Academic Publishers for having offered to publish this volume.

The Galaxy

From Galaxies to Turbines: Science, Technology and the Parsons Family looks at the way science and industry relate to each other, and at the way social attitudes affect this relationship. An expert on the Parsons Family, the author beautifully illustrates this by tracing the story of the remarkable endeavors of the Parsons family during the 125 years that embraced their lives in Ireland and Great Britain during the developing Industrial Revolution. The father of the family, William Parsons, Earl of Rosse, discovered the Spiral Nebulae at his observatory in Ireland and displayed an unusual familiarity with engineering principles in the building of his two giant telescopes. His son, Charles, was at the forefront of the new age of technology among shipbuilders and engineers in the northeast coast of England. Lavishly illustrated throughout, with a handy family tree and map of the River Tyne pin-pointing key historic events, this is a highly accessible and fascinating account for the general reader interested in the way scientific knowledge and industrial application have slowly emerged in recent history.

Formation and Evolution of Black Holes in the Galaxy

Each night, we are able to gaze up at the night sky and look at the thousands of stars that stretch to the end of our individual horizons. But the stars we see are only those that make up our own Milky Way galaxy—but one of hundreds of billions in the whole of the universe, each separated by inconceivably huge tracts of empty space. In this book, astronomer James Geach tells the rich stories of both the evolution of galaxies and our ability to observe them, offering a fascinating history of how we've come to realize humanity's tiny place in the vast universe. Taking us on a compelling tour of the state-of-the-art science involved in mapping the infinite, Geach offers a first-hand account of both the science itself and how it is done, describing what we currently know as well as that which we still do not. He goes back one hundred years to when scientists first proved the existence of other galaxies, tracking our continued improvement in the ability to collect and interpret the light that stars in faraway galaxies have emitted through space and time. He discusses examples of this

rapidly accelerating research, from the initial discovery that the faint “spiral nebulae” were actually separate star systems located far beyond the Milky Way to the latest observations of the nature of galaxies and how they have evolved. He also delves into the theoretical framework and simulations that describe our current “world model” of the universe. With one hundred superb color illustrations, Galaxy is an illuminating guide to the choreography of the cosmos and how we came to know our place within it that will appeal to any stargazer who has wondered what was beyond their sight.

Graph Paper Notebook

The Harlow-Shapley Symposium on Globular Cluster Systems in Galaxies

Isometric DOT Paper Portrait Notebook featuring 120 pages 6"x9"

The Western Galaxy

In the centennial year, 1985-86, of Harlow Shapley's birth, the study of globular clusters was no less important to the development of astronomy than in 1915, when Shapley first noted their concentration on the sky. By 1917 Shapley had used the properties of the system of globular clusters to complete the Copernican revolution and locate the solar system, and its Earth-bound observers, far from the center of the Galaxy and the globular cluster distribution. Seven decades later, in the year of these proceedings, globular cluster research and the study of the system of globular clusters in our own and distant galaxies is undergoing a renaissance of activity. The introduction of new observational tools, particularly CCD imagers and digital spectrographs, as well as powerful theoretical methods have transformed the study of globular clusters into one of the main line areas of modern astrophysics. Thus it seemed particularly appropriate to one of us, when considering how the Harvard College Observatory might mark the Shapley centennial, to propose and plan for an IAU Symposium on Globular Cluster Systems in Galaxies. Planning for the Shapley Symposium, as it came to be called, was even more drawn out than the preparation of this volume. The Symposium was originally proposed to the IAU Secretariat in time for it to be held in August, 1985, so that it might occur in the centennial (calendar) year.

The Paper Wagon

This monograph describes comprehensively and in sufficient detail both the theory and observation of gravitational lensing, an effect that is of growing importance for astronomical observations and cosmological modelling. This book is the first monograph (outside the USSR) on this topic.

Galaxy of Origami Stars

The enormously powerful phenomena of starbursts are examined in this book. These spectacular star-forming events are seen on large scales in some galaxies, often triggered by galactic interactions. An intriguing implication of starburst research is that active galactic nuclei (AGN) may not be powered by accreting black holes. Instead theories are presented where compact powerhouses of dust-enshrouded star formation lie at the core of AGN, with supernovae exploding roughly once per year within massive nuclear concentrations of gas. This book collects articles from a timely international conference in Elba, Italy, in 1992; these comprise a thorough review of the most important developments in galactic-scale star formation since the starburst revolution of the late 1980s. This text will introduce graduate students to this exciting area and keep experts abreast with rapid developments in it.

Galaxy Science Fiction

A Stylized Notebook that Reflects your Interest This fun galaxy composition notebook is a great change to the standard composition notebook for those who love the cosmos, while still providing a great writing book for all school, business and professional activities. Features, /b> - Wide Ruled Lined Paper - Crisp White Writing Paper - Sheet Size 8.5 x 11 - Soft Flexible & Glossy Cover

Star Formation, Galaxies and the Interstellar Medium

Includes The Claverings, by Anthony Trollope interspersed through vols. 1-3, 1866-67.

Galaxy Notebook

The Best Botanist in the Galaxy: Isometric Dot Paper Notebook Book 120 Pages 6"x9"

Do you want to learn about the physical origin of the Universe, but don't have the rest of eternity to read up on it? Do you want to know what scientists know about where you and your planet came from, but without the science blinding you? 'Course you do - and who better than For Dummies to tackle the biggest, strangest and most wonderful question there is! The Origins of the Universe For Dummies covers: Early ideas about our universe Modern cosmology Big Bang theory Dark matter and gravity Galaxies and solar systems Life on earth Finding life elsewhere The Universe's forecast

The Spacetastic Adventures of Mr. Space and Captain Galaxy

Papers submitted for presentation to American Rocket Society national convention.

The Galaxy of Wit, Or, Laughing Philosopher

Delineating the huge strides taken in cosmology in the past ten years, this much-anticipated second edition of Malcolm Longair's highly appreciated textbook has been extensively and thoroughly updated. It tells the story of modern astrophysical cosmology from the perspective of one of its most important and fundamental problems - how did the galaxies come about? Longair uses this approach to introduce the whole of what may be called "classical cosmology". What's more, he describes how the study of the origin of galaxies and larger-scale structures in the Universe has provided us with direct information about the physics of the very early Universe.

The Best Vet in the Galaxy: Isometric Dot Paper Notebook Book 120 Pages 6"x9"

The Galaxy

Make fantastic paper craft creations and decorative art using this stunning array of scrapbook papers. 8.5'x 11' Dimensions Double-sided 16 Designs across 32 pages Indulge now in your crafting hobby - You deserve it!

Occasional Paper

The Galaxy

Isometric DOT Paper Portrait Notebook featuring 120 pages 6"x9"

Mapping the Galaxy and Nearby Galaxies

Isometric DOT Paper Portrait Notebook featuring 120 pages 6"x9"

The Galaxy

In published papers H A Bethe and G E Brown worked out the collapse of large stars and supernova explosions. They went on to evolve binaries of compact stars, finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution. C-H Lee joined them in the study of black hole binaries and gamma ray bursts. They found the black holes to be the fossils of the gamma ray bursts. From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions. This invaluable book contains 23 papers on astrophysics, chiefly on compact objects, written over 23 years. The papers are accompanied by illuminating commentary. In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars, and to explain why black holes are formed at relatively low masses.

Paper Galaxy

This cosmic kit is bursting with exciting models inspired by stars, planets, and space exploration. These easy origami projects will transform young folders into intergalactic travelers as they pilot their starship through the Solar System and beyond! Celebrate the 50th anniversary of Apollo 11's lunar landing in a hands-on way with this kit. Kids can learn about the moon and what it takes to get there, as each model comes with information on astronomy and cosmology. Blend an interest in our Universe with the fun of origami paper folding! The breathtaking night sky fascinates children everywhere, inspiring an appreciation of science and astronomy, as well as science fiction stories, comics, cartoons and films. Many kids even dream of becoming an astronomer or astronaut when they grow up, which makes this unique kit a perfect gift. The included large wall poster is packed with colorful graphics that relate interesting information about the Solar System, the Milky Way galaxy, and the Universe--the perfect way for kids to decorate their room or classroom while they deepen their knowledge of the cosmos. This origami kit includes everything you need: A full-color instruction book containing easy, step-by-step instructions for 12 models 48 sheets of folding paper A 21" x 24" fun and educational wall poster Online video tutorials Kids will have a blast folding the unique models, including: A Rocket--with its classic red fin styling, the model is ready to soar into the unknown on a voyage of discovery. A Dwarf Star--one of 4 types of star models in the kit, this one has 4 points and can be folded up in just 10 steps! A Flying Saucer--a ring-like enigma from another galaxy. Do they come in peace? Planet One--a crater-pocked rocky planet, ripe for imaginary exploration A Space Hero Picture Frame--intrepid explorers are eligible for induction into the "Hall of Heroes" gallery by way of this cleverly folded frame And many more!

Nonlinear Optimization and Related Topics

In July 1992, over 300 astronomers attended the Third Tetons Summer School on the subject of `The Environment and

Evolution of Galaxies'. This book presents 28 papers based on invited review talks and a panel discussion on 'The Nature of High Redshift Objects'. The major themes include: the Interstellar and Intergalactic Medium, Galaxy Formation and Evolution, Cooling Flows, Quasars and Radiation Backgrounds, and Interactions between Galaxies/AGNs and their Environment. Recent advances with the ROSAT, COBE and Hubble Space Telescope are discussed, together with current theoretical developments. The tutorial nature of the papers make this book a valuable supplement for professional astronomers, graduate students, and senior undergraduates. As with previous Tetons conferences, this book provides both the current state of observational and theoretical research and material complementary to courses in extragalactic and interstellar astrophysics.

The Environment and Evolution of Galaxies

The formation of galaxies is one of the greatest puzzles in astronomy, the solution is shrouded in the depths of space and time, but has profound implications for the universe we observe today. This book discusses the beginnings of the process from cosmological observations and calculations. It examines the different theories of galaxy formation and shows where each theory either succeeds or fails in explaining what we actually observe. In addition, the book looks ahead to what we may expect to uncover about the epoch of galaxy formation from the new and upcoming generations of telescopes and technology.
