The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are

Global science education is a reality at the end of the 20th century - albeit an uneven reality - because of tremendous technological and economic pressures. Unfortunately, this reality is rarely examined in the light of what interests the everyday lives of ordinary people rather than the lives of political and economic elites. The purpose of this book is to offer insightful and thought-provoking commentary on both realities. The tacit question throughout the book is 'Whose interests are being served by current science education practices and policies?' The various chapters offer critical analysis from the perspectives of culture, economics, epistemology, equity, gender, language, and religion in an effort to promote a reflective science education that takes place within,

rather than taking over, the important cultural lives of people. The target audience for the book includes graduate students in education, science education and education policy professors, policy and government officials involved with education.

### **The Education Gazette of the Province of the Cape of Good Hope**

Build reference skills for students in grades 4 and up using *Research: Ready-to-Go Topics for Building Reference Skills*. This 64-page book is perfect for classroom centers, unit launches, small- and large-group activities, and take-home assignments. The activities can be used in any order and with the ongoing curriculum. Students write reports, prepare presentations, and delve into related topics from science, history, geography, math, geology, and everyday themes.

## **The Standardisation of African Languages**

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional

development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
