A Critical Review of the Role of the Laboratory in Science Teaching

Institutional Abuse brings together a number of different research studies and accounts of institutional abuse from leading academics and researchers. Public enquiries and court cases concerning institutional abuse in a range of settings have generated considerable media interest and have highlighted the need for preventative strategies and appropriate responses. Four areas of abuse are covered: *the abuse of children *the abuse of adults with mental health problems *the abuse of adults with learning difficulties *the abuse of older people. Each section includes a chapter which reports on users' experiences of abuse and their views as to how institutional abuse can be prevented and survivors' needs met.

Keeping Women in Science

Scientific Papers of the Institute of Physical and Chemical Research

This book addresses new technologies being considered by the Federal Aviation

Administration (FAA) for screening airport passengers for concealed weapons and explosives. The FAA is supporting the development of promising new technologies that can reveal the presence not only of metal-based weapons as with current screening technologies, but also detect plastic explosives and other non-metallic threat materials and objects, and is concerned that these new technologies may not be appropriate for use in airports for other than technical reasons. This book presents discussion of the health, legal, and public acceptance issues that are likely to be raised regarding implementation of improvements in the current electromagnetic screening technologies, implementation of screening systems that detect traces of explosive materials on passengers, and implementation of systems that generate images of passengers beneath their clothes for analysis by human screeners.

The Spectator

Physical Processes

With a never-before published paper by Lord Henry Cavendish, as well as a biography on him, this book offers a fascinating discourse on the rise of scientific attitudes and ways of knowing. A pioneering British physicist in the late 18th and early 19th centuries, Cavendish was widely considered to be the first full-time scientist in the modern sense. Through the lens of this unique thinker and writer, this book is about the birth of modern science.

Engineering Education

The Scientist

Proceedings of the Royal Society. Section A, Mathematical and Physical Science

Dictionary of Scientific Biography

Traditionally, engineering education books describe and reinforce unchanging principles that are basic to the field. However, the dramatic changes in the engineering environment during the last decade demand a paradigm shift from the engineering education community. This revolutionary volume addresses the development of long-term strategies for an engineering education system that will reflect the needs and realities of the United States and the world in the 21st century. The authors discuss the critical challenges facing U.S. engineering education and present a plan addressing these challenges in the context of rapidly changing circumstances, technologies, and demands.

Nature

Keeping Women in Science examines the careers of women and men at a large Australian research institute and the challenges that women with or without children experience, often resulting from direct and indirect discrimination and being positioned as outsiders. The research found a huge generational change between the Baby Boomers—the current science leaders—and Gen X and Gen Ys. Younger women and men reject the traditional model of a successful scientist—a single male for whom science is like a religious vocation. Instead, they seek new models for doing science that support dual careers, work flexibility and work-life balance.

National Needs for Critically Evaluated Physical and Chemical Data

This brand new set of resources, focuses on raising levels of interest and achievement in Foundation GCSE candidates. This is the only Foundation Level course that is written to cover all major specifications, preparing students for Single and Double Award Sciences.
