At a time when globalization and technology are dramatically altering the world we live in, is education reform in the United States headed down the right path? Are schools emphasizing the knowledge and skills that students need in a global society--or are they actually undermining their strengths by overemphasizing high-stakes testing and standardization? Are education systems in China and other

countries really as superior as some people claim? These and other questions are at the heart of author Yong Zhao's thoughtful and informative book. Born and raised in China and now a distinguished professor at Michigan State University, Zhao bases many of his observations on firsthand experience as a student in China and as a parent of children attending school in the United States. His unique perspective leads him to conclude that "American education is at a crossroads" and "we need to change course" to maintain leadership in a rapidly changing world. To make his case, Zhao explains * What's right with American education; * Why much of the criticism of schools in the United States has been misleading and misinformed; * Why China and other nations in Asia are actually reforming their systems to be more like their American counterparts; * How globalization and the "death of distance" are affecting jobs and everyday life; and * How the virtual world is transforming the economic and social landscape in ways far more profound than many people realize. Educators, policymakers, parents, and others interested in preparing students to be productive global citizens will gain a clear understanding of what kinds of knowledge and skills constitute "digital competence" and "global competence," and what schools can--and must--do to meet the challenges and opportunities brought about by globalization and technology.

A comprehensive collection of the field's most provocative, influential new work Business Forecasting compiles some of the field's important and influential literature into a single, comprehensive reference for forecast modeling and process improvement. It is packed with provocative ideas from forecasting researchers and practitioners, on topics including accuracy metrics, benchmarking, modeling of problem data, and overcoming dysfunctional behaviors. Its coverage includes often-overlooked issues at the forefront of research, such as uncertainty, randomness, and forecastability, as well as emerging areas like data mining for forecasting. The articles present critical analysis of current practices and consideration of new ideas. With a mix of formal, rigorous pieces and brief introductory chapters, the book provides practitioners with a comprehensive examination of the current state of the business forecasting field. Forecasting performance is ultimately limited by the 'forecastability' of the data. Yet failing to recognize this, many organizations continue to squander resources pursuing unachievable levels of accuracy. This

Do Fish Feel Pain?

While there has been increasing interest in recent years in the welfare of farm animals, fish are frequently thought to be different. In many people's perception, fish, with their lack of facial expressions or recognisable communication, are not seen to count when it comes to welfare. Angling is a major sport, and fishing a big industry. Millions of fish are caught on barbed hooks, or left to die by suffocation on the decks of fishing boats. Here, biologist Victoria Braithwaite explores the question of fish pain and fish suffering, explaining what we now understand about fish behaviour, and examining the related ethical questions about how we should treat these animals. She asks why the question of pain in fish has not been raised earlier, indicating our prejudices and assumptions; and argues that the latest and

This report documents the generation of an outbound Earth to Moon transfer preliminary database consisting of four cases calculated twice a day for a 19 year period. The database was desired as the first step in order for NASA to rapidly generate Earth to Moon trajectories for the Constellation Program using the Mission Assessment Post Processor. The completed database was created running a flight trajectory and optimization program, called Copernicus, in batch mode with the use of newly created Matlab functions. The database is accurate and has high data resolution. The techniques and scripts developed to generate the trajectory information will also be directly used in generating a comprehensive database. While he depicts the various stages of Frost's colorful life, Parini also sensitively explores the poet's psyche, showing how he dealt with adversity, family tragedy, and depression. By taking the reader into the poetry itself, which he reads closely and brilliantly, Parini offers an insightful road map to Frost's remarkable world.

The Syntax Workbook

"Read a poem to yourself in the middle of the night. Turn on a single lamp and read it while you're alone in an otherwise dark room or while someone sleeps next to you. Say it over to yourself in a place where silence reigns and the din of culture—the constant buzzing noise that surrounds you—has momentarily stopped. This poem has come from a great distance to find you." So begins this astonishing book by one of our leading poets and critics. In an unprecedented exploration of the genre, Hirsch writes about what poetry is, why it matters, and how we can open up our imaginations so that its message—which is of vital importance in day-to-day life—can reach us and make a difference. For Hirsch, poetry is not just a part of life, it is life, and expresses like no other art our most sublime emotions. In a marvelous reading of world poetry, including verse by such poets as Wallace Stevens, Elizabeth Bishop, Pablo Neruda, William Wordsworth, Sylvia Plath, Charles Baudelaire, and many more, Hirsch discovers the meaning of their words and ideas

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.
