A Better Planet

Bringing groups together is a central and unrelenting task of leadership. CEOs must nudge their executives to rise above divisional turf battles, mayors try to cope with gangs in conflict, and leaders of many countries face the realities of sectarian violence. Crossing the Divide introduces cutting-edge research and insight into these age-old problems. Edited by Todd Pittinsky of Harvard's Kennedy School of Government, this collection of essays brings together two powerful scholarly disciplines: intergroup relations and leadership. What emerges is a new mandate for leaders to reassess what have been regarded as some very successful tactics for building group cohesion. Leaders can no longer just "rally the troops." Instead they must employ more positive means to span boundaries, affirm identity, cultivate trust, and collaborate productively. In this multidisciplinary volume, highly regarded business scholars, social psychologists, policy experts, and interfaith activists provide not only theoretical frameworks around these ideas, but practical tools and specific case studies as well. Examples from around the world and from every sector - corporate, political, and social - bring to life the art and practice of intergroup leadership in the twenty-first century.

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk.

Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Discover how human beings react to danger—and what makes the difference between life and death “Fascinating and useful . . . [shows that] the most important variable in an emergency is your own behavior.”—The New York Times Today, nine out of ten Americans live in places at significant risk of earthquakes, hurricanes, tornadoes, terrorism, or other disasters. Tomorrow, some of us will have to make split-second choices to save ourselves and our families. How will we react? What will it feel like? Will we be heroes or victims? In her quest to answer these questions, award-winning journalist Amanda Ripley traces human responses to some of recent history's epic disasters, from the explosion of the Mont Blanc munitions ship in 1917—one of the biggest explosions before the invention of the atomic bomb—to the journeys of the 15,000 people who found their way out of the World Trade Center on September 11, 2001. To understand the science behind the stories, Ripley turns to leading brain scientists, trauma psychologists, and other disaster experts. She even has her own brain examined by military researchers and experiences, through realistic simulations, what it might be like to survive a plane crash into the ocean or to escape a raging fire. Ripley comes back with precious wisdom about the surprising humanity of crowds, the elegance of the brain's fear circuits, and the stunning inadequacy of many of our evolutionary responses. Most unexpectedly, she discovers the brain's ability to do much, much

Negotiating Rationally

Explains cataclysmic events—including earthquakes, tsunamis, volcanic eruptions, hurricanes, and financial crashes—and details the mathematical modeling that researchers use to predict when the next big disaster will strike.

The Ostrich Paradox

By the world-renowned seismologist, a riveting history of natural disasters, their impact on our culture, and new ways of thinking about the ones to come Earthquakes, floods, tsunamis, hurricanes, volcanoes—they stem from the same forces that give our planet life. Earthquakes give us natural springs; volcanoes produce fertile soil. It is only when these forces exceed our ability to withstand them that they become disasters. Together they have shaped our cities and their architecture; elevated leaders and toppled governments; influenced the way we think, feel, fight, unite, and pray. The history of natural disasters is a history of ourselves. In *The Big Ones*, leading seismologist Dr. Lucy Jones offers a bracing look at some of the world's greatest natural disasters, whose reverberations we continue to feel today. At Pompeii, Jones explores how a volcanic eruption in the first century AD challenged prevailing views of religion. She examines the California floods of 1862 and the limits of human memory. And she probes more recent events—such as the Indian Ocean tsunami of 2004 and the American hurricanes of 2017—to illustrate the potential for globalization to humanize and heal. With population in hazardous regions growing and temperatures around the world rising, the impacts of natural disasters are greater than ever before. *The Big Ones* is more than just a work of history or science; it is a call to action. Natural hazards are inevitable; human catastrophes are not. With this energizing and exhaustively researched book, Dr. Jones offers a look at our past, readying us to face down the Big Ones in our future.

The Wedding Date Disaster

Al Qaeda detonates a nuclear weapon in Times Square during rush hour, wiping out half of Manhattan and killing 500,000 people. A virulent strain of bird flu jumps to humans in Thailand, sweeps across Asia, and claims more than fifty million lives. A single freight car of chlorine derails on the outskirts of Los Angeles, spilling its contents and killing seven million. An asteroid ten kilometers wide slams into the Atlantic Ocean, unleashing a tsunami that renders life on the planet as we know it extinct. We consider the few who live in fear of such scenarios to be alarmist or even paranoid. But *Worst Cases* shows that such individuals—like Cassandra foreseeing the fall of Troy—are more reasonable and prescient than you might think. In this book, Lee Clarke surveys the full range of possible catastrophes that animate and dominate the popular imagination, from toxic spills and terrorism to plane crashes and pandemics. Along the way, he explores how the ubiquity of worst cases in everyday life has rendered them ordinary and mundane: very real threats like a killer flu or an American Hiroshima have become so common that they have lost their ability to shock us. Fear and dread, Clarke argues, have

actually become too rare: only when the public has more substantial information and more credible warnings will it take worst cases as seriously as it should. A timely and necessary look into how we think about the unthinkable, Worst Cases will be must reading for anyone attuned to our current climate of threat and fear.

The Four Stages of Highly Effective Crisis Management

Christianity is a surprising religion. It has changed the world in remarkable ways throughout history simply through Christians living out their faith. More recently, we've become afraid of a habituated Christianity, thinking that routines will rob our faith of its vitality. The net effect is that we've replaced the habits that surprise the world with habits that mimic the world—and both we and the world suffer for it. Integrating the five habits in the BELLS model—Bless others, Eat together, Listen to the Spirit, Learn Christ, and understand yourself as Sent by God into others' lives—will help you spread the gospel organically, graciously, and surprisingly. Michael Frost, a world-renowned expert on evangelism and discipleship, makes evangelism a lifestyle that is fulfilling, exciting, effective, and easy to live out!

The Bright Side Of Disaster

"The Ostrich Paradox boldly addresses a key question of our time: Why are we humans so poor at dealing with disastrous risks, and what can we humans do about it? It is a must-read for everyone who cares about risk." —Daniel Kahneman, winner of the Nobel Prize in Economics and author of *Thinking, Fast and Slow*

We fail to evacuate when advised. We rebuild in flood zones. We don't wear helmets. We fail to purchase insurance. We would rather avoid the risk of "crying wolf" than sound an alarm. Our ability to foresee and protect against natural catastrophes has never been greater; yet, we consistently fail to heed the warnings and protect ourselves and our communities, with devastating consequences. What explains this contradiction? In *The Ostrich Paradox*, Wharton professors Robert Meyer and Howard Kunreuther draw on years of teaching and research to explain why disaster preparedness efforts consistently fall short. Filled with heartbreaking stories of loss and resilience, the book addresses:

- How people make decisions when confronted with high-consequence, low-probability events—and how these decisions can go awry
- The 6 biases that lead individuals, communities, and institutions to make grave errors that cost lives
- The Behavioral Risk Audit, a systematic approach for improving preparedness by recognizing these biases and designing strategies that

Could the terrorist attacks on the Twin Towers have been avoided? What about the control failures in the recent global financial crisis? Behind these apparently very different events, it is possible to identify a common element of organizational myopia - a syndrome that severely limits the capacity of organizations to foresee the effects of their own decisions and to recognize signs of danger or opportunity. Organizational Myopia explores the barriers that impede organizations from identifying an effective response to the problems that they have to confront. Using real-world cases, the author investigates the mechanisms that generate myopia in organizations at the individual, organizational, and interorganizational level in contexts that are complex, uncertain, ambiguous, and changeable. This book will help readers understand how to limit the origins of myopia and therefore increase the capacity of organizations to anticipate and contain unexpected events.

better decisions, noticing important information in the world around you, and improving leadership skills. Imagine your advantage in negotiations, decision-making, and leadership if you could teach yourself to see and evaluate information that others overlook. The Power of Noticing provides the blueprint for accomplishing precisely that. Max Bazerman, an expert in the field of applied behavioral psychology, draws on three decades of research and his experience instructing Harvard Business School MBAs and corporate executives to teach you how to notice and act on information that may not be immediately obvious. Drawing on a wealth of real-world examples and using many of the same case studies and thought experiments designed in his executive MBA classes, Bazerman challenges you to explore your cognitive blind spots, identify any salient details you are programmed to miss, and then take steps to ensure it won't happen again. His book provides a step-by-step guide to breaking bad habits and spotting the hidden details that will change your decision-making and leadership skills for the better, teaching you to pay attention to what didn't happen, acknowledge self-interest, invent the third choice, and realize that what you see is not all there is. While many bestselling business books have explained how susceptible to manipulation our irrational cognitive blind spots make us, Bazerman helps you avoid the habits that lead to poor decisions and ineffective leadership in the first place. With The Power of Noticing at your side, you can learn how to notice what others miss, make wiser decisions, and lead more successfully.

First 90 Days

When hurricanes, earthquakes, wildfires, and other disasters strike, we count our losses, search for causes, commiserate with victims, and initiate relief efforts. Amply illustrated and expansively researched, *Inventing Disaster* explains the origins and development of this predictable, even ritualized, culture of calamity over three centuries, exploring its roots in the revolutions in science, information, and emotion that were part of the Age of Enlightenment in Europe and America. Beginning with the collapse of the early seventeenth-century Jamestown colony, ending with the deadly Johnstown flood of 1889, and highlighting fires, epidemics, earthquakes, and exploding steamboats along the way, Cynthia A. Kierner tells horrific stories of culturally significant calamities and their victims and charts efforts to explain, prevent, and relieve disaster-related losses. Although how we interpret and respond to disasters has changed in some ways since the nineteenth century, Kierner demonstrates that, for better or worse, the intellectual, economic, and political environments of earlier eras forged our own twenty-first-century approach to disaster, shaping the stories we tell, the precautions we ponder, and the remedies we prescribe for disaster-ravaged communities.

"A "gray rhino" is a highly probable, imminent threat; we can see the dust cloud on the horizon long before the charging animal comes into view. Gray rhinos are not random, but occur after a series of warnings and visible events. The Lehman Brothers crash of 2008, the devastating aftermath of Hurricane Sandy and other natural disasters, the file-sharing that presaged the collapse of the traditional music business model, the rising chaos in the Middle East all were evident well in advance of the consequences. Gray rhinos are much easier to spot and guard against than "black swans"-- the rare, truly unforeseen catastrophes. Why then, when faced with solvable problems, do we continually fail to address them before they spiral out of control? Drawing on her extensive background in policy formation and crisis management, as well as in-depth interviews with leaders from around the world, Michele Wucker explains in *The Gray Rhino* how significant crises can be recognized and countered strategically. When Jon Krakauer reached the summit of Mt. Everest in the early afternoon of May 10, 1996, he hadn't slept in fifty-seven hours and was reeling from the brain-altering effects of oxygen depletion. As he turned to begin the perilous descent from 29,028 feet (roughly the cruising altitude of an Airbus jetliner), twenty other climbers were still pushing doggedly to the top, unaware that the sky had begun to roil with clouds. *Into Thin Air* is the definitive account of the deadliest season in the history of Everest by the acclaimed Outside journalist and author of the bestselling *Into the Wild*. Taking the reader step by step from Katmandu to the mountain's deadly pinnacle, Krakauer has his readers shaking on the edge of their seat. Beyond the terrors of this account, however, he also peers deeply into the myth of the world's tallest mountain. What is it about Everest that has compelled so many people—including himself—to throw caution to the wind, ignore the concerns of loved ones, and willingly subject themselves to such risk, hardship, and expense? Written with emotional clarity and supported by his unimpeachable reporting, Krakauer's eyewitness account of what happened on the roof of the world is a singular achievement. From the Paperback edition.

Things That Surprise You

In the early 1990s, the First National Bank of Keystone in West Virginia began buying and securitizing subprime mortgages from all over the country, and quickly grew from a tiny bank with just \$100 million in assets to over \$1.1 billion. For three years, it was listed as the most profitable large community bank in the country. It was all a fraud. All of the securitization deals the bank entered into lost money. To hide that fact, bank insiders started cooking the books, and concealing that they were also embezzling millions of dollars from the bank. This was all hidden from the bank's attorneys and auditors, federal bank examiners, and even the board of directors of the bank. To keep the examiners at bay, the bank insiders did everything possible to avoid giving them access to documents they were entitled to see, documents they knew would sink their scheme. The head of the bank even went so far as to bury four large truckloads of documents in a ditch on her ranch. Robert S. Pasley explores the failure of the First National Bank of Keystone, the intrigue involved, and the lessons that could have been learned—and still can be learned—about how banks operate, how federal banking regulators supervise financial institutions, how agencies interact with one another, and how such failures can be avoided in the future.

Organizational Myopia

Negotiation and decision-making expert Max Bazerman explores how we can make more ethical choices by aspiring to be better, not perfect. Every day, you make hundreds of decisions. They're largely personal, but these choices have an ethical tinge as well; they value certain principles and ends over others. Bazerman argues that we can better balance both dimensions—and we needn't seek perfection to make a real difference for ourselves and the world. *Better, Not Perfect* provides a deeply researched, prescriptive roadmap for how to maximize our pleasure and minimize pain. Bazerman shares a framework to be smarter and more efficient, honest and aware—to attain your "maximum sustainable goodness." In Part Two, he identifies four training grounds to practice these newfound skills for outsized impact: how you think about equality and your tribe(s);

But things are changing. At home, Emily and her mom are learning to move on after her parents' divorce. Hardest of all, her beloved sister Mina has been in a treatment facility to deal with her anorexia. Emily is eager to have her back, but anxious about her sister getting sick again. The Big Ones

In *Negotiating Rationally*, Max Bazerman and Margaret Neale explain how to avoid the pitfalls of irrationality and gain the upper hand in negotiations. For example, managers tend to be overconfident, to recklessly escalate previous commitments, and fail to consider the tactics of the other party. Drawing on their research, the authors show how we are prisoners of our own assumptions. They identify strategies to avoid these pitfalls in negotiating by concentrating on opponents' behavior and developing the ability to recognize individual limitations and biases. They explain how to think rationally about the choice of reaching an agreement versus reaching an impasse. A must read for business professionals.

Watkins' book definitely has the research and insight to equip you for the better of the two paths."

Heads Up

A practical, bipartisan call to action from the world's leading thinkers on the environment and sustainability Sustainability has emerged as a global priority over the past several years. The 2015 Paris Agreement on climate change and the adoption of the seventeen Sustainable Development Goals through the United Nations have highlighted the need to address critical challenges such as the buildup of greenhouse gases in the atmosphere, water shortages, and air pollution. But in the United States, partisan divides, regional disputes, and deep disagreements over core principles have made it nearly impossible to chart a course toward a sustainable future. This timely new book, edited by celebrated scholar Daniel C. Esty, offers fresh thinking and forward-looking solutions from environmental thought leaders across the political spectrum. The book's forty essays cover such subjects as ecology, environmental justice, Big Data, public health, and climate change, all with an emphasis on sustainability. The book

The Unthinkable

I can't believe I have to go home to Nebraska for my sister's wedding. I'm gonna need a wingman and a whole lot of vodka for this level of family interaction. At least my bestie agreed he'd man up and help. Too bad he had to catch a different flight than me. Then his plane got delayed. And finally—because bad things always happen in threes—instead of my best friend, his evil twin strolls out of the airport. If you looked up *doesn't-deserve-to-be-that-confident, way-too-hot-for-his-own-good* billionaire in the dictionary, you'd find a picture of Will Holt. He's awful. Horrible. The worst—even if his butt looks phenomenal in those jeans. Ten times worse? My buffer was supposed to be there to keep me away from the million and one family events. But Satan's spawn just grins and signs us up for every. Single. Thing. Fine. "Cutthroat" Scrabble? I'm in. I can't wait to take this guy down a notch. But somewhere between Pictionary and the teasing glint in his eyes, our bickering starts to feel like more than just a game
