With sensitivity to the Christian tradition and a rich understanding of postmodern thought, Peter Rollins argues that the movement known as the “emerging church” offers a singular, unprecedented message of transformation that has the potential to revolutionize the theological and moral architecture of Western Christianity. *How (not) to Speak of God* sets out to explore the theory and praxis of this contemporary expression of faith. Rollins offers a clear exploration of this embryonic movement and provides key resources for those involved in communities that are conversant with, and seeking to minister effectively to, the needs of a postmodern world. “Here in pregnant bud is the rose, the emerging new configuration, of a Christianity that is neither Roman nor Protestant, neither Eastern nor monastic; but rather is the re-formation of all of them. Here, in pregnant bud, is third-millennium Christendom.” —Phyllis Tickle “I am a raving fan of the book you are holding. I loved reading it. I have already begun widely recommending it. Reading it did good for my mind and for my soul. It helped me understand my own spiritual journey more clearly, and it gave me a sense of context for the work I’m involved in. In fact, I would say this is one of the two or three most rewarding books of theology I have read in ten years.” —Brian McLaren, from the Foreword

Siloxanes belong to a group of substances used in a number of industrial applications and in consumer products such as additives in fuel, car polish, cleaners, anti foamers and car waxes. Besides this, they are widely used in e.g. personal care and biomedical products. As a result of their wide use, siloxanes are presumably spread into the environment both via point sources and via diffuse sources and may be found in the environment. Recent studies have suggested that siloxanes may have direct or indirect toxic effects on various biological processes. The aim of this screening study was to

obtain a snapshot of the occurrence of siloxanes in the Nordic environment. The here presented screening study involved six countries: Denmark, Faroe Islands, Finland, Iceland, Norway and Sweden. Sampled media types were air, biota, sediment, sludge, soil and water. Siloxanes were found in all the analysed samples types except soils. The results indicate that there is a general pollution of siloxanes in the Nordic environment, close to dense population and major sources. There was, however, a great variation in concentrations. The cyclic siloxanes occurred in all media in significantly higher concentrations than the linear siloxanes. At present, the observed concentrations are not alarmingly high, and many background sites seem to be non-contaminated. However, the use of siloxanes is extensive and it is possible that continued use will lead to increased environmental levels, eventually reaching effect concentrations.

Critical Qualitative Health Research seeks to deepen understandings of the philosophies, politics and practices shaping contemporary qualitative health related research. This accessible, lively, controversial introduction draws on current empirical examples and critical discussion to show how qualitative research undertaken in neoliberal healthcare contexts emerges and the complex issues qualitative researchers confront. This book provides readers with a critical, interrogative discussion of the histories and the legacies of qualitative research, as well as of the more recent calls for renewed criticality in research to respond to global health concerns. Contributions further showcase a range of contemporary work engaging with these issues and the complex encounters with philosophies, politics and practices

this involves; from seeking explicit engagements with posthuman ideas or detailed explorations of deeply engaged humanist approaches, to critical discussions of the politics and practices of emerging novel, digital and creative methods. This book offers postgraduate researchers, health researchers and students alike opportunities to engage more deeply with the emergent, complex and messy terrain of qualitative health related research.
