Corvette:1963 to 1967 reveals many events in the manufacture of the 1963 - 1967 Corvette that the author took from his personal files. The author presents his personal experience working in the Chevrolet St. Louis Assembly Plant and as liaison between Chevrolet St. Louis and A. O. Smith in Ionia, Michigan, where the Corvette bodies were outsourced. The 1963 Corvette launch in the fall of 1962 was a challenge. I was there as a Quality Analyst to witness and document the launch. My book presents an insight not documented elsewhere. I was trained as a mathematician, so the book is written in a no frills language keeping the text under control. With the armed forces of the People's Republic of China celebrating their 75th anniversary on August 1, 2002, it only seemed appropriate and timely to take stock of the world's largest military. The People's Liberation Army (PLA) has officially been in existence for three-quarters of a century, and its history is one filled with turmoil and warfare. One weekend in September 2002, a group of PLA specialists gathered at Carlisle Barracks, the home of the U.S. Army War College, to assess what lessons China's soldiers had drawn from the history of their own armed forces. This volume constitutes the final product of months of extensive research by the individual authors and hours of intense discussion at the 3-day conference

by approximately 50 participants. The conference was sponsored jointly by the American Enterprise Institute, the Heritage Foundation, and the U.S. Army War College. It is with great pleasure that I commend this book to anyone with a serious interest in the Chinese military.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

proper handling and care of your Ford car. Read it carefully—particularly the instructions on lubrication, the cooling system, care of battery, etc., which are absolutely necessary to economical and satisfactory operation. Your car is a splendid piece of machinery. If properly cared for, it will give you years of satisfactory service at little cost. When repairs are needed, we recommend having the work done by an authorized Ford dealer. They are provided with special service equipment. Furthermore they are interested, more than any one else, in your personal satisfaction with the car. Let experienced mechanics make repairs or adjustments. Your car is too valuable a piece of machinery to place in unskilled hands. Expert workmanship is just as essential in servicing your car as it is in building it.

The Mazda Miata is one of the most popular sports cars on the road today. In production for more than 20 years, the Miata's popularity has grown, and the number of aftermarket components available to the Miata enthusiast has grown, too. Author and Miata expert Keith Tanner has been modifying, repairing, building, and racing Miatas for years, and he will guide you through how to best modify your car to suit your needs, starting with an explanation on how everything works and how the various parts will interact. One of the challenges of collecting, restoring, and showing classic cars is keeping the paint blue ribbon condition. If your restoration involves stripping and repainting the entire car, you'll want to precisely match the original color. If the goal is to preserve the factory paint, you may be touching-up certain areas with the goal of matching those areas to the rest of the car's weathered panels. Covering these topics and more, Stefan Gesterkamp leads the reader through the concours painting process. Whether doing it themselves or hiring a professional, the car's owner gains a solid foundation of knowledge before investing significant time and money into a paint project.
