Rational Medical Decision Making: A Case-Based Approach

2011 National Book Award Finalist As a fourteen-year-old who just moved to a new town, with no friends and a louse for an older brother, Doug Swieteck has all the stats stacked against him. So begins a coming-of-age masterwork full of equal parts comedy and tragedy from Newbery Honor winner Gary D. Schmidt. As Doug struggles to be more than the “skinny thug” that his teachers and the police think him to be, he finds an unlikely ally in Lil Spicer—a fiery young lady who “smelled like daisies would smell if they were growing in a big field under a clearing sky after a rain.” In Lil, Doug finds the strength to endure an abusive father, the suspicions of a whole town, and the return of his oldest brother, forever scarred, from Vietnam. Together, they find a safe haven in the local library, inspiration in learning about the plates of John James Audubon’s birds, and a hilarious adventure on a Broadway stage. In this stunning novel, Schmidt expertly weaves multiple themes of loss and recovery in a story teeming with distinctive, unusual characters and invaluable lessons about love, creativity, and survival.

Sinking of the Titanic

This volume--the first to bring together research on sociocultural aspects of mathematics education--presents contemporary and international perspectives on social justice and equity issues that impact mathematics education. In particular, it highlights the importance of three interacting and powerful factors--gender, social, and cultural dimensions. Sociocultural Research on Mathematics Education: An International Perspective is distinguished in several ways: * It is research based. Chapters report on significant research projects; present a comprehensive and critical summary of the research findings; and offer a critical discussion of research

methods and theoretical perspectives undertaken in the area. * It is future oriented, presenting recommendations for practice and policy and identifying areas for further research. * It deals with all aspects of formal and informal mathematics education and applications and all levels of formal schooling. As the context of mathematics education rapidly changes-- with an increased demand for mathematically literate citizenship; an increased awareness of issues of equity, inclusivity, and accountability; and increased efforts for globalization of curriculum development and research-- questions are being raised more than ever before about the problems of teaching and learning mathematics from a non-cognitive science perspective. This book contributes significantly to addressing such issues and answering such questions. It is especially relevant for researchers, graduate students, and policymakers in the field of mathematics education.

Social Sciences Research

This book introduces community college faculty and faculty developers to the use of faculty learning communities (FLCs) as a means for faculty themselves to investigate and surmount student learning problems they encounter in their classrooms, and as an effective and low-cost strategy for faculty developers working with few resources to stimulate innovative teaching that leads to student persistence and improved learning outcomes. Two-year college instructors face the unique challenge of teaching a mix of learners, from the developmental to high-achievers, that requires using a variety of instructional strategies and techniques. Even the most experienced teachers can find this diversity demanding. Faculty developers at many two-year colleges still rely solely on the one-day workshop model that, while useful, rarely results in sustained student-centered changes in pedagogy or the curriculum, and may not be practicable for the growing cohort of part-time faculty members. By linking work in the classroom with scholarship and reflection, FLCs provide participants with a sense of renewed engagement and stimulate collegial exploration of ways to achieve educational excellence. FLCs are usually faculty-instigated and cross-disciplinary, and comprise groups of six to fifteen faculty that work collaboratively through regular meetings over an extended period of time to promote research and an exchange of experiences, foster community, and develop the scholarship of teaching. FLCs alleviate burnout and isolation, promote the development, testing, and peer review of new classroom strategies or technologies, and lead to the reenergizing and professionalization of teachers. This book introduces the reader to FLCs and to the Scholarship of Teaching and Learning, offering examples of application in two-year colleges. Individual chapters describe, among others, an FLC set up to support course redesign; an “Adjunct Connectivity FLC” to integrate part-time faculty within a department and collaborate on the curriculum; a cross-disciplinary FLC to promote student self-regulated learning, and improve academic performance and persistence; a critical thinking FLC that sought to define critical thinking in separate disciplines, examine interdisciplinary cross-over of critical thinking, and measure critical thinking more accurately; an FLC that researched the transfer of

learning and developed strategies to promote students' application of their learning across courses and beyond the classroom. Each chapter describes the formation of its FLC, the processes it engaged in, what worked and did not, and the outcomes achieved. Just as when college faculty fail to remain current in their fields, the failure to engage in continuing development of teaching skills, will equally lead teaching and learning to suffer. When two-year college administrators restrain scholarship and reflection as inappropriate for the real work of the institution they are in fact hindering the professionalization of their teaching force that is essential to institutional mission and student success. When FLCs are supported by leaders and administrators, and faculty learn that collaboration and peer review are valued and even expected as part of being a teaching professional, they become intrinsically motivated and committed to collaboratively solving problems, setting the institution on a path to becoming a learning organization that is proactive and adept at navigating change.

Teaching the Library Research Process

Research to the Point

Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience. Crafting the right research question, finding good sources, properly summarizing them, operationalizing concepts and designing good tests for their hypotheses, presenting and analyzing quantitative as well as qualitative data are all tough-going without a great deal of guidance and encouragement. Writing a Research Paper in Political Science breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. New to the Fourth Edition: A non-causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process. Updated and more detailed discussions of plagiarism, paraphrases, "drop-ins," and "transcripts" help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of "fake news" and disinformation shows students how to evaluate and choose high quality sources, as well as how to protect oneself from being fooled by bad sources. Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for

presentations in the classroom, at a conference, and beyond. A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it.
