The author of this web site assumes all responsibility for this web site and it's content. The views expressed on this web site are the views of the author and may not represent the views of his employer. Read XBRL for Dummies. Chapter 1 is a must, it provides in about 20 pages a comprehensive explanation of XBRL. Chapter 4 provides an XBRL

The internet: Everything you ever need to know | Internet

In information systems, a tag is a keyword or term assigned to a piece of information (such as an Internet bookmark, digital image, database record, or computer file). This kind of metadata helps describe an item and allows it to be found again by browsing or searching. Tags are generally chosen informally and personally by the item's creator or by its viewer, depending on the system, although

Tag (metadata) - Wikipedia

A “sensational” map of the brain A team of researchers from Massachusetts Institute of Technology (), the Broad Institute of MIT and Harvard @broadinstitute and Harvard University @harvard has now mapped a region of the brain implicated in sensory hypersensitivity, attention deficits, and sleep disruption that many people with autism experience.

The Semantic Web is an extension of the World Wide Web through standards set by the World Wide Web Consortium (W3C). The goal of the Semantic Web is to make Internet data machine-readable.. To enable the encoding of semantics with the data, technologies such as Resource Description Framework (RDF) and Web Ontology Language (OWL) are used. These technologies are used to formally represent metadata.

Download Privacy Technologies And Policy: Third Annual

But in fact, the web has gone through at least three phases of evolution - from the original web 1.0, to the web 2.0 of "small pieces, loosely joined" (social networking, mashups, webmail, and
