Energy Optimization in Process Systems and Fuel Cells, Second Edition covers the optimization and integration of energy systems, with a particular focus on fuel cell technology. With rising energy prices, imminent energy shortages, and increasing environmental impacts of energy production, energy optimization and systems integration is critically important. The book applies thermodynamics, kinetics and economics to study the effect of equipment size, environmental parameters, and economic factors on optimal power production and heat integration. Author Stanislaw Sieniutycz, highly recognized for his expertise and teaching, shows how costs can be substantially reduced, particularly in utilities common in the chemical

industry. This second edition contains substantial revisions, with particular focus on the rapid progress in the field of fuel cells, related energy theory, and recent advances in the optimization and control of fuel cell systems. New information on fuel cell theory, combined with the theory of flow energy systems, broadens the scope and usefulness of the book. Discusses engineering applications including power generation, resource upgrading, radiation conversion, and chemical transformation in static and dynamic systems. Contains practical applications of optimization methods that help solve the problems of power maximization and optimal use of energy and resources in chemical, mechanical, and environmental engineering.

Rebel Spirits

Robert Lanza is one of the most respected scientists in the world a US News and World Report cover story called him a genius and a renegade thinker, even likening him to Einstein. Lanza has teamed with Bob Berman, the most widely read astronomer in the world, to produce Biocentrism, a revolutionary new view of the universe. Every now and then a simple yet radical idea shakes the very foundations of knowledge. The startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world. For most humans of the 15th century, the notion of Earth as ball of rock was nonsense. The whole of Western, natural philosophy is undergoing a sea change again, increasingly being forced upon us by the experimental findings of quantum theory, and at the same time, toward doubt and uncertainty in the physical explanations of the universes genesis and structure. Biocentrism completes this shift in worldview, turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around. In this paradigm, life is not an accidental byproduct of the laws of physics. Biocentrism takes the reader on a seemingly improbable but ultimately

inescapable journey through a foreign universe our own from the viewpoints of an acclaimed biologist and a leading astronomer. Switching perspective from physics to biology unlocks the cages in which Western science has unwittingly managed to confine itself. Biocentrism will shatter the readers ideas of life--time and space, and even death. At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal. The 21st century is predicted to be the Century of Biology, a shift from the previous century dominated by physics. It seems fitting, then, to begin the century by turning the universe outside-in and unifying the foundations of science with a simple idea discovered by one of the leading life-scientists of our age. Biocentrism awakens in readers a new sense of possibility, and is full of so many shocking new perspectives that the reader will never see reality the same way again.

In an urgent follow-up to his best-selling *Why Your World Is About To Get A Whole Lot Smaller*, Jeff Rubin argues that the end of cheap oil means the end of growth. What it will be like to live in a world where growth is over? Economist and resource analyst Jeff Rubin is certain that the world's governments are getting it wrong. Instead of moving us toward economic recovery, the measures being taken around the globe right now are digging us into a deeper hole. Both politicians and economists are missing the fact that the real engine of economic growth has

always been cheap, abundant fuel and resources. But that era is over. The end of cheap oil, Rubin argues, signals the end of growth--and the end of easy answers to renewing prosperity. With China and India sucking up the lion's share of the world's ever more limited resources, the rest of us will have to make do with less. But is this all bad? Rubin points out that there is no research to show that people living in countries with hard-charging economies are happier, and plenty of research to show that some of the most contented people on the planet live in places with no growth or slow growth. But bad or good, it's the new reality, and Rubin reveals how our day-to-day lives will be drastically changed.

Leila Aboulela’s American debut is a provocative, timely, and engaging novel about a young Muslim woman—once privileged and secular in her native land and now

impoverished in London—gradually embracing her orthodox faith. With her Muslim hijab and down-turned gaze, Najwa is invisible to most eyes, especially to the rich families whose houses she cleans in London. Twenty years ago, Najwa, then at university in Khartoum, would never have imagined that one day she would be a maid. An upperclass Westernized Sudanese, her dreams were to marry well and raise a family. But a coup forces the young woman and her family into political exile in London. Soon orphaned, she finds solace and companionship within the Muslim community. Then Najwa meets Tamer, the intense, lonely younger brother of her employer. They find a common bond in faith and slowly, silently, begin to fall in love. Written with directness and force, *Minaret* is a lyric and insightful novel about Islam and an alluring glimpse into a culture Westerners are only just beginning to understand. “Lit up by a highly unusual sensibility and world view, so rarefied and uncompromising that it is likely to throw the reader out of kilter . . .
