## **Empowerment Series: Introduction to Social Work and Social Welfare: Empowering People**

What are the consequences of globalization for the structure of political conflicts in Western Europe? How are political conflicts organized and articulated in the twenty-first century? And how does the transformation of territorial boundaries affect the scope and content of political conflicts? This book sets out to answer these

questions by analyzing the results of a study of national and European electoral campaigns, protest events and public debates in six West European countries. While the mobilization of the losers in the processes of globalization by new right populist parties is seen to be the driving force of the restructuring of West European politics, the book goes beyond party politics. It attempts to show how the cleavage coalitions that are shaping up under the impact of globalization extend to state actors, interest groups and social movement organizations, and how the new conflicts are framed by the various actors involved.

Ever dynamic, organized crime continues to change. For example, efforts to combat one aspect of the phenomenon, the American Mafia, have reached high levels of prosecutorial success -- resulting in a decline in the organization's relative importance. Meanwhile, criminal organizations operating on a global scale have become more sophisticated and more threatening, and additional crime groups have been added to the pantheon we refer to as organized crime. Reflecting changes that have occurred in recent years, this eleventh edition updates information and analyses of organized crime, including how criminal groups around the world are organized; the widening of their business activities; and the statutes, agencies, and techniques used to combat them. ## **The Textbook of Health and Social Care**

Our planet is undergoing radical environmental and social changes. Sustainability has now been put into question by, for example, our consumption patterns, loss of biodiversity, depletion of resources, and exploitative power relations. With apparent ecological and social limits to globalization and development, current levels of consumption are unsustainable, inequitable, and inaccessible to the majority of humans. Understanding and attaining sustainability is a crucial matter at a time when our planet is in peril--environmentally, economically, socially, and politically. Since its official inception in the 1970s, environmental sociology has provided a powerful lens to understanding the challenges, possibilities and modes of sustainability. Most chapters in this book were published as peer-reviewed articles in Sustainability in its special issue "Sustainability through the Lens of Environmental Sociology," providing an environmental sociology approach to understanding and achieving the widely used notion of "sustainability." This edited

collection covers, among other topics, the inherent discursive formations of environmental sociology, conceptual tools and paradoxes, competing theories and practices, and their complex implications on our society at large. Chapters in this book specifically focus on how sustainable development has been understood through different theoretical lenses in environmental sociology, such as ecological modernization, policy/reformist sustainable development, and critical structural approaches (such as the treadmill of production, ecological Marxism, metabolic rift theory, etc.); and how sustainable development has been practiced in, or by, various stakeholders, such as states, corporations, and local communities, for various ends, through the use of specific case studies, showing, for example, the discursive shifts, dynamic formations, and diverse contours of sustainable development. The range of relevant topics includes: - Environmental sociology as a field of inquiry for sustainability - Historical context of sustainable development in environmental sociology - Nature-society relationship in environmental sociology - Theories/approaches to sustainability discourse in environmental sociology - Environmentalism/environmental movements for sustainability - Empirical cases (such as climate change, biodiversity, food, certification, etc.) through the lens of environmental sociology
